† More detailed information on the water power resources of other countries is given in the 1951 Year Book, pp. 531-533.

WATER POWERS OF CANADA

Scale of Miles
100 50 0 100 200 300

is exceeded only by Norway. Canada is in approximately fifth place in potential power resources but, on the whole, those resources are more readily available to prospective markets than are those of other countries that outrank Canada, an exception being the United States. In particular might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

Subsection 1.—Available and Developed Water Power in Canada

Table 1 gives a summary of the water power resources of Canada and their development as at Dec. 31, 1955.

1.—Available and Developed Water Power by Province as at Dec. 31, 1955

Province or Territory	Available 24 Hour Power at 80 p.c. Efficiency		Turbine Installation ¹
	At Ordinary Minimum Flow	At Ordinary Six Months Flow	
	h.p.	h.p.	h.p.
Newfoundland.....	958,500	2,754,000	329,150
Prince Edward Island.....	500	3,000	1,882
Nova Scotia.....	25,500	156,000	177,018
New Brunswick.....	123,000	334,000	164,130
Quebec.....	10,890,000	20,445,000	7,795,657
Ontario.....	5,407,000	7,261,000	5,367,866
Manitoba.....	3,333,000	5,562,000	796,900
Saskatchewan.....	550,000	1,120,000	109,835
Alberta.....	508,000	1,258,000	284,010
British Columbia.....	7,023,000	10,998,000	2,271,460
Yukon and Northwest Territories.....	382,500	814,000	33,240
Canada.....	29,207,000	50,705,000	17,511,148

¹ Includes water wheels and hydraulic turbines installed.

The figures given in the first and second columns of Table 1 represent 24 hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Tabulations of potential power in Canada are not complete as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less explored northern districts. Apart from areas where definite studies have been carried out and the results recorded no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient where economic heads possibly may be created by the construction of dams. Thus the figures in Table 1 of available power, under the two conditions of stream flow, represent only the *minimum* water power possibilities of Canada.

The third column of the table gives the total capacity of the water wheels actually installed and should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available developed water power resources. At developed sites, the water wheel installation averages 30 p.c. greater than the corresponding calculated maximum available power at the same sites. Figures of Table 1 therefore indicate that the *at present recorded* water power resources will permit of a turbine installation of nearly 66,000,000 h.p. and that the turbine installation at Dec. 31, 1955 represents less than 27 p.c. of recorded water power resources.

The development of Canada's water power resources is a good index of the country's industrial growth and of the change in its economic life. In 1900, prior to the inception of long distance transmission of electricity, Canada's economy was based largely on agriculture and the total of hydraulic installations (mostly small mills) was only 173,000 h.p.

After the successful solution of the problems of transmission of electric energy for use in distant communities the development of large hydraulic projects became practicable and by 1910 total installation had risen to 977,000 h.p. In ensuing decades the growth in installed capacity, partly speeded by war demands, proceeded at an accelerated rate.

The figures in Table 2, and the graph on p. 555, show clearly the consistent growth in the total capacity of hydraulic installations since 1900. The average annual increase from 1900-05 was about 56,000 h.p., a rate that was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large central electric stations. The period 1906-22 saw development proceed at the fairly uniform rate of 150,000 h.p. per annum. The heavier demand for electricity during the prosperous 1920's increased the rate of installation sharply in 1923 and it continued at about 377,000 h.p. per annum from 1923 to 1935. As an aftermath to the economic depression, the rate of installation was low during the years 1936-39, whereas the power required for war purposes accounted for the high average rate of increase of 481,000 h.p. per annum during the period 1940-43. Few developments were undertaken in the later war years or in the immediate postwar period so that only a small amount of new capacity came into operation in the 1944-47 period. However the results of the later postwar program of construction are apparent in the large growth in the years 1948-55 when the average rate was about 906,000 h.p. per annum. Present programs of expansion indicate a continuation of this rate of growth for some years.

2.—Hydraulic Turbine Horsepower Installed by Province as at Dec. 31, Decennially 1900-50 and Annually 1951-55

NOTE.—Figures for each year 1900-30 are given in the 1939 Year Book, p. 362, for 1931-39 in the 1946 edition, p. 362, and for 1940-49 in the 1954 edition, pp. 556-557.

The availability of large amounts of hydro-electric energy has so fostered the economical utilization of the natural products from land, forest and mine that Canada is rapidly becoming highly industrialized. Low cost power is fundamental in meeting the enormous requirements of the pulp and paper industry—Canada's largest industry and one of the world's great industrial enterprises; it also allows economical mining, milling and refining of base and precious metals and facilitates their fabrication into a multitude of manufactured articles. Canada's outstanding industrial growth in the postwar period has been made in conjunction with accelerated development of water power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 h.p., networks of transmission line carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, enabling manufacturing processes to be carried on in many of the smaller centres of population. Economical domestic electrical service also contributes in no small measure to the high standard of living in Canada.

The total of 17,511,148 h.p. of installed capacity of water power plants in 1955 produced about 81,750,000,000 kwh. of energy. Assuming a working year of 275 eight-hour days, and accepting that the working capacity of a manual worker equals 1/10 h.p., the total energy produced from water power in 1954 represents the equivalent of the output of about 495,000,000 labourers.

In the Chart above, "Total Electric Energy Generated" refers to the total of Central Electric Station energy production and excludes energy produced for own use by the pulp and paper and other industries.

Table 3 shows, under three classifications, the purposes for which the developed water power is primarily utilized.

3.—Developed Water Power by Province and Industry as at Dec. 31, 1955

Province or Territory	Turbine Installation			Total ⁴
	In Central Electric Stations ¹	In Pulp and Paper Mills ²	In Other Industries ³	
	h.p.	h.p.	h.p.	h.p.
Newfoundland.....	132,850	182,300	14,000	329,150

Canada.....	15,333,424	931,630	1,246,094	17,511,148
Percentages of total installation.....	87.6	5.3	7.1	100.0

¹ Includes only hydroelectric stations that develop power for sale.

² Includes only water power *actually developed* by pulp and paper companies.

³ Includes only water power *actually developed* by industries other than central electric stations and the pulp and paper industries.

⁴ Includes water wheels and hydraulic turbines installed.

Central electric station classification totalling 15,333,424 h.p. represents 88 p.c. of the total developed water power as at Dec. 31, 1955. In 1900 the corresponding percentage was 33.5, thus showing the tremendous growth in central electric station installations since the inception of successful long distance transmission of electricity. Central hydro-electric stations produced 96 p.c. of all electricity sold in or exported from Canada during 1955.

The pulp and paper turbine installation total of 931,630 h.p. includes only water power *actually developed* and directly used by pulp and paper companies. In addition this industry is the greatest purchaser of central electric station power, buying nearly 17 p.c. of all power sold for industrial purposes in 1954. Part of the purchased power is classed as secondary, being used for steam generation by electric boilers.

The 'other industries' group develops 1,246,094 h.p. solely for its own use. These diversified industries also provide a broad market for the power sold by the central electric stations, as the amount of power produced by these industries represents only a part of the power they use.

The figure of total hydraulic installation in Canada, 17,511,148 h.p. is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to Dec. 31, 1955 by the inclusion of new installations completed during the year and by deletion of those old units which were dismantled.

Subsection 2.—Water Power Developments in the Provinces and Territories 1954

In 1954 all records were broken for the amount of new hydro-electric generating capacity brought into operation in Canada during a period of one year, when capacity totalling 1,758,450 h.p. was completed. This may be compared with the previous high of 1952 when 1,066,250 h.p. was brought into service. New plants and extensions under construction for operation in 1955 total approximately 1,000,000 h.p. and those planned for operation in later years about 2,500,000 h.p. The building of new thermal electric

plants or extensions was also active and, in the field of power distribution, new main transmission lines were completed or under construction in many parts of the country, including submarine cables across the lower St. Lawrence River and across the Strait of Georgia. Over-all progress in the provinces, principally covering hydro-electric development, is outlined below.

Atlantic Provinces.—In *Newfoundland* the Iron Ore Company of Canada completed in June its development of 12,000 h.p. in two units under 34 foot head at Menihek Rapids on the Ashuanipi River, a tributary of the Hamilton River in Labrador. The plant is designed for two additional units when required. The Union Electric Light and Power Company Limited was actively engaged on the construction of a development on the Trinity River near Trinity. Initially the plant will consist of one unit of 2,000 h.p. under 260 foot head to be completed in September 1955 but provision is being made for an ultimate second unit. The United Towns Electric Company Limited is planning the development of 2,000 h.p. under 250 foot head on New Chelsea Brook near New Chelsea, construction to begin in 1955.

In *Nova Scotia* the Nova Scotia Light and Power Company Limited completed its 9,000 h.p. development in one unit under 400 foot head on the Nictau River near Middleton. An old development of 400 h.p. at this location was dismantled. The Nova Scotia Power Commission carried out active construction on a new development of 6,000 h.p. in two units under 22 foot head on the Mersey River at Lower Great Brook for operation in 1955.

In *New Brunswick* the New Brunswick Electric Power Commission, in connection with the development of the Beechwood site on the St. John River, called tenders for the relocation of a two mile reach of the Canadian Pacific Railway line and about one mile of Highway No. 2 between McAdam and Edmundston. The plant will consist initially of two units each of 45,000 h.p. under 60 foot head, with provision for a third unit when required; operation is scheduled for 1957.

Steam Plant Construction.—In addition to water power development the Newfoundland Light and Power Company Limited has under construction a new steam plant of 10,000 kw. at St. John's for 1956 operation, with provision for a second unit when required. The Nova Scotia Light and Power Company Limited has under construction a unit of 24,000 kw. in its steam plant at Halifax and the Nova Scotia Power Commission a unit of 20,000 kw. at Trenton. The Seaboard Power Corporation completed in March 1954 an addition of a 18,750 kw. unit in its steam plant at Glace Bay and is adding a similar unit for operation in March 1955. The New Brunswick Electric Power Commission is adding a 22,000 kw. unit to its steam plant at Chatham, scheduled for completion in September 1956. Campbellton completed an addition of 1,360 kw. to its municipal fuel electric station. The City of Edmundston is adding a diesel unit of 1,700 kw. to its plant, scheduled for operation in February 1955.

Quebec.—The Quebec Hydro-Electric Commission completed two units each of 16,000 h.p. in its development at Rapid II on the upper Ottawa River, with a third unit under installation for 1955 operation. Provision has also been made for a fourth unit to bring total ultimate capacity to 64,000 h.p. The Commission is actively engaged on its very large Bersimis River project, designed for 1,200,000 h.p. in eight units. Three units are expected to be in operation in 1956. Progress in 1954 included clearing, road building, camp construction, a new wharf at Forestville, a temporary powerhouse of 15,000 h.p. at Lac Casse, and a beginning of the excavation for the tunnel and powerhouse. Part of the power produced will be used to serve the Gaspé peninsula through four 69 kv. submarine cables 31.5 miles in length laid across the bed of the St. Lawrence River during 1954. Construction of the 161 kv. line of 132 miles from Les Boules to Copper Mountain was also completed in 1954 and, for later use, a double-circuit 300 kv. line from Bersimis River to Quebec and Montreal is under construction.

At the Beauharnois plant on the St. Lawrence River, dredging operations in the intake canal were continued and an interconnection with the system of the Gatineau Power Company was also completed by a 110 kv. line from Cedars to Lachute. In the more northern region, a 146 mile 161 kv. line between St. Felicien and the Chibougamau mining district was nearing completion.

The Shawinigan Water and Power Company has preliminary work under way for installation during 1955 of an additional unit of 44,500 h.p. at Rapide Blanc, one of 65,000 h.p. at La Trenché, and one of 49,000 h.p. at the La Tuque generating station. During 1954 the Company extended its transmission system by 75 miles of 60 kv. line and had under construction 80 miles of 220 kv. line.

The Gatineau Power Company has under installation for 1955 operation a new unit of 47,000 h.p. at Pagan Falls which will operate at 60 cycles, representing the anticipated eventual change from 25 cycle operation in the Gatineau River plants.

The Northern Quebec Power Company Limited is installing an additional unit of 35,000 h.p. at their Quinze plant on the upper Ottawa River for operation late in 1955.

The Gulf Power Company's plant on the Ste. Marguerite River of two units each of 12,000 h.p. was completed in May 1954 and power at 44 kv. is being delivered to Seven Islands and to Clarke City.

The Quebec Rural Electrification Bureau completed the construction of its hydro-electric plant on the Petites Bergeronnes River at Lac des Sables comprising two units, each of 600 h.p. The City of Megantic placed in service in May the first unit of 2,250 h.p. in its Gayhurst plant on the Chaudière River and operation of the second unit and completion of the development is expected in December.

Ontario.—The Hydro-Electric Power Commission of Ontario continued the rapid expansion of generating capacity during 1954 on several major projects.

In the Sir Adam Beck-Niagara Generating Station No. 2 on the Niagara River, seven units of 105,000 h.p. each were brought into operation and completion of the 12 unit plant of 1,260,000 h.p. was scheduled for 1955. One of the large hydraulic tunnels was placed in service in June and the second in October, the major part of the huge project being completed during 1954. Supplementary to the capacity of the main powerhouse, construction was undertaken on a pumped storage reservoir, comprised of a rock-fill dyke with impervious clay core, to provide 15,000 acre-feet of storage at a location adjacent to the intake canal. Six reversible pump-turbine units each of 40,000 h.p. are to be installed for initial operation in 1956.

The Commission began construction of the control dam which forms part of the Niagara River remedial works. These are designed to control water levels and enhance the beauty of Niagara Falls and are being carried out jointly by Canada and the United States. In final form, the control dam, with an over-all length of 1,550 ft., will comprise 13 individually operated bascule-type gates mounted on concrete piers. The dam is located on the Canadian side of the river a short distance upstream from the head of the Cascades. Two gates, comprising the first stage of construction, were scheduled for operation in April 1955.

At the Pine Portage generating station on the Nipigon River, two additional units, each of 45,000 h.p., were placed in service, bringing the total installation to 172,000 h.p.

At Manitou Falls on the English River preliminary construction was begun on a development initially of 55,500 h.p. in three units for operation in 1956 and with provision for a fourth unit of 18,500 h.p. Progress was made in the clearing of flood lands and in the construction of cofferdams.

As the participating Canadian agency in the development of the International Rapids on the St. Lawrence River the Commission began preliminary construction in the powerhouse area, comprising two cofferdams and two access tunnels under the present navigation canal. The project involves a main dam and powerhouse between Barnhart Island and the Canadian shore, and two control dams, one on the United States channel of Barnhart

Island and one on the main channel below Galop Rapids, near Iroquois, Ont. Tenders have been called for the supply of 75,000 h.p. turbines, 16 of which will be installed and operated by the Commission, with initial operation scheduled for 1958.

Extensions to the Commission's transmission system included 185 miles at 230 kv., 263 miles at 115 kv., 197 miles at 13 kv. to 44 kv., and 1,080 circuit miles of rural lines. Good progress was made on the conversion to 60 cycle operation of equipment in the area previously using 25 cycle power and about 50 p.c. of the program was completed. One 85,000 h.p. generating unit in the DeCew Falls Plant No. 2 was changed to 60 cycle operation.

The Great Lakes Power Company in October 1954 completed its McPhail Falls development on the Michipicoten River, consisting of two turbines, 7,500 h.p. each, under 48 foot head and each driving a 5,000 kva. generator.

Prairie Provinces.—In *Manitoba* the Manitoba Hydro-Electric Board proceeded on schedule with the construction of the McArthur Falls development on the Winnipeg River. Four units, operating under reduced head, were placed in service during December 1954 and it was expected that the plant of 80,000 h.p. in eight units would be completed by July 1955. A new 110 kv. double-circuit transmission line has been completed from the plant to Transcona. The Manitoba Power Commission continued to expand its distribution system; extensions include 115 miles of transmission line at 115 kv., 21 miles at 66 kv., and 92 miles at 33 kv. The City of Winnipeg brought into operation a second unit of 25,000 kw. in its auxiliary steam plant.

In *Saskatchewan* the Saskatchewan Power Corporation completed a new unit of 25,000 kw. in the Saskatoon steam plant, bringing total capacity to 75,000 kw. A dual fuel unit of 2,500 kw. was installed at Swift Current. During the year, about 290 miles of 69 kv. line were built joining Weyburn to Assiniboia, Estevan to Red Jacket, and Saskatoon to North Battleford.

In *Alberta* Calgary Power Limited completed its Bears paw development on the Bow River a short distance west of Calgary. The plant comprises a 20,750 h.p. turbine under 48 foot head, driving an 18,000 kva. generator. The Company also brought into operation a third unit of 30,000 h.p. with 23,500 kva. generator in its Ghost plant farther upstream; the plant operates under 92 foot head and total capacity is 66,000 h.p. In addition construction has been undertaken for 1955 operation on two new developments on the Kananaskis River, 6,900 h.p. at Upper Kananaskis Lake and 18,500 h.p. at the Pocatererra site below Lower Kananaskis Lake. During 1954 the transmission system of the Company was extended by the building of 142 miles of line at 66 kv. and 114 miles at lower voltage. Moreover Calgary Power Limited has under construction for 1956 operation a steam turbine plant at Wabamun with a capacity of 66,000 kw. The Canadian Utilities Limited installed a 6,000 kw. gas turbine unit at Vermilion and, in co-operation with Northland Utilities, added two 1,250 kw. diesel units to the plant at Fairview. The City of Lethbridge installed a new unit in its steam plant, enlarging its capacity by 13,500 kw.

British Columbia.—The highlight of hydro-electric construction in 1954 was the successful completion of the first stage of the great Kemano-Kitimat project of the Aluminum Company of Canada. The first three Pelton turbines, each of 150,000 h.p., under 2,485 foot head, were brought into operation in the underground power house and power is being transmitted at 287 kv. over the 50 mile line to Kitimat. Equipment has been ordered and preparations are under way for the installation of the fourth 150,000 h.p. turbine and 122,000 kva. generator for 1955 operation. Ultimate capacity is about 2,000,000 h.p. but no definite further schedule of installation has been announced.

The Consolidated Mining and Smelting Company of Canada Limited completed the first stage of its Waneta development on the Pend d'Oreille River, comprising two turbines each of 120,000 h.p., under 210 foot head, each directly connected to a 90,000 kva. generator. Provision has been made in the powerhouse and headworks for two additional units when required.

The British Columbia Electric Company Limited completed the installation of the fourth unit of 62,000 h.p. in its Bridge River plant, with a total capacity of 248,000 h.p. The work of raising the crest of the LaJoie storage dam was continued. Work was commenced on the Seton Creek development near Lillooet to consist of a single unit of 58,500 h.p. operating under 147 foot head for operation in 1956. Construction of a 60 kv. transmission line was completed between Lillooet and Ashcroft, a distance of 60 miles, and work began on the building of a second 100 mile transmission line from Bridge River to Vancouver to operate at 345 kv., the highest voltage on this Continent. To provide additional power for Vancouver Island an order has been placed for a submarine cable to be laid across the Strait of Georgia with a length of 77 miles and a capacity of 120,000 kva., operating at 132 kv.

The British Columbia Power Commission continued work on the redevelopment of the Puntledge River site near Courtenay, the plant to consist of a single unit comprising a 35,000 h.p. turbine under 355 foot head, driving a 30,000 kva. generator, with operation expected early in 1955. Good progress was made on the Spillimacheen River project and completion of the first stage, comprising 5,250 h.p. in three units, is anticipated in the spring of 1955; later an additional unit of 3,000 h.p. may be installed. Investigations have been completed covering a 70,000 h.p. development at Ladore Falls on the Campbell River and construction is planned for 1955. A 60 kv. transmission line from Whatshan to Nakusp was completed and a 33 kv. line from Spillimacheen River to Golden is under construction.

The Shawatlans hydro-electric plant of Northern British Columbia Power Company Limited at Woodworth Lake, comprising a 1,650 h.p. turbine and 1,125 kva. generator, was destroyed by fire in August 1954. It is expected that replacement will be undertaken in 1955.

Additions to existing diesel powered generating stations of the British Columbia Power Commission include 1,000 kw. at Williams Lake, 1,000 kw. at Terrace, 1,136 kw. at Burns Lake and 1,000 kw. at Quesnel.

Yukon Territory.—In southern Yukon and northern British Columbia, Northwest Power Industries Limited continued investigations towards a major hydro-electric development similar to Kitimat but with an even higher ultimate capacity of about 4,300,000 h.p. The scheme involves the conversion of the large lakes in the headwaters of the Yukon River into a huge storage reservoir by the building of dams near Whitehorse and at other locations. The flow of the main Yukon River and of adjacent rivers and streams would then be diverted to the Nakonake Valley, providing a head of 1,100 ft. and allowing the development initially of 880,000 h.p. and ultimately of 2,800,000 h.p. Later a third tunnel would convey the water to the Taku River for further power generation. The proposed industrial site would be on the Taku River in British Columbia where smelters and refineries for various metallurgical purposes could be located.

The Yukon Hydro Company Limited plans to build in 1955 a new plant of 800 h.p. involving the diversion to McIntyre Creek of water from the tailrace of the present Porter Creek plant.

Section 2.—The Central Electric Station Industry

Central electric stations are companies, municipalities or individuals selling or distributing electric energy whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz.: (1) private—those privately owned and operated by companies or individuals, and (2) public—those owned and operated by municipalities or governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last group purchases practically all the power it resells and a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels

with approximately 88 p.c. of the total capacity of hydro installations in all industries in Canada. The generators driven by this hydraulic equipment generate 94 p.c. of the total output of all central electric stations.

4.—Electric Energy Generated by Type of Station 1938-53 and by Province 1953

Year	Generated by—		Total	Year, Province or Territory	Generated by—		Total

Subsection 1.—Statistics of Central Electric Stations*

The growth of the central electric station industry has been practically continuous since 1919 when statistics of kilowatt hours generated were first made available. The general movement has been strongly upward: the output of central stations during 1953 was more than eleven times that of 1919 and, in terms of 1939, had risen by 122 p.c. Total horsepower installed increased almost continuously even during the depression years mainly because large power projects planned before the depression were in process of construction. Expansion since the end of World War II has been spectacular and large additional developments are currently under way (see pp. 556-560). Installed capacity of the industry in hydro and thermal units is now more than one horsepower for every Canadian.

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

5.—Summary Statistics of Central Electric Stations 1944-53

NOTE.—Figures for main plant equipment for 1917-31 are given in the 1940 Year Book, p. 369 and for 1932-43 in the 1950 edition, p. 564.

Domestic Service.—Power used by domestic customers or for household purposes amounts to almost 16 p.c. of the total production of central electric stations. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct federal, provincial and municipal taxes on such service, are shown in Table 7. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces but the differences in the average bills are smaller. The availability of low cost power to domestic users contributes greatly to the high standard of living in Canada. Average consumption per customer is more than double that of 1939 and costs per kilowatt hour are almost 11 p.c. lower.

7.—Summary Statistics of Domestic Consumption of Electricity 1944-53

Farm Service.—Table 8 shows the number of farm customers, the average annual consumption, average annual revenue and the average revenue per kilowatt hour sold to these customers in each province in 1952 and 1953. Rural electrification has made considerable progress since the end of World War II. Farm customers added during 1953 totalled 24,479 and the national total at 384,349 increased by 7 p.c. over 1952. It is estimated that about 61 p.c. of the farm dwellings in Canada now enjoy the benefits of power line service. In addition many other farms generate their own electricity by the use of engines, windmills, etc.

Equipment of Central Electric Stations.—Power station equipment shown in Table 9 includes the total equipment of generating stations both thermal and hydraulic as well as the thermal standby equipment of non-generating stations. The capacities of the equipment are manufacturers' ratings and, with regard to water wheels and turbines, it should be noted that the kilowatt hour capacities vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over heavy transmission lines. With a few exceptions most of the thermal plants are small, serving the needs of local municipalities. In 1953 the number of thermal plants decreased as compared with previous years. Larger units are being installed to replace in some localities two or three small units. Equipment data were not included for small industries or firms, particularly in Saskatchewan and Alberta, where output was largely consumed by their own plants.

Export and Import of Electric Power.—Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kilowatt hour is levied with some exceptions. The export duties for the years ended Mar. 31, 1951 to 1954, were \$608,602, \$743,407, \$738,918 and \$662,860 respectively. Exports for the years 1951-54 are shown in Table 10. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements between other provinces.

The water allowed to be diverted at Niagara Falls for power purposes was increased by 5,000 cu. feet per second to the Canadian side in November 1940 through a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted and in 1943 an additional 4,000 c.f.s. to Canadian plants, bringing the totals up to 54,000 c.f.s. for Canada and 32,500 c.f.s. for the United States. This increased water, with greater development of plants on the St. Lawrence River, made possible the increased export of both firm and secondary power to the United States (5,000 c.f.s. will produce about 150,000 h.p. at the Queenston, Ont., plant). During 1950-51, increased demands from domestic consumers and low water reduced the surplus energy available for export but exports increased in 1952 and reached an alltime high of 2,718,308,000 kwh. in 1954.

Subsection 2.—Ownership and Regulation of Central Electric Stations*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of municipalities to develop and distribute electricity. The Hydro-Electric Power Commission of Ontario now generates and purchases power, transmits it to rural and urban municipalities and also serves large power customers. This Commission also exports and imports power to and from the United States and is currently developing water power along the projected St. Lawrence Seaway in co-operation with the New York State Power Authority.

11.—Summary Statistics of Publicly Owned Central Electric Stations 1944-53

Year	Generating Power Plants	Customers	Electric Energy Generated	Power Equipment	
				Water Wheels and Turbines	Total
	No.	No.	'000 kwh.	h.p.	h.p.

1953.....	221	2,583,608	28,447,578	5,618,667	7,382,895

¹ Figures include Newfoundland since 1949.

A large portion of the power development in Quebec is connected with pulp and paper plants and with the aluminum industry. Such power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Substantial blocks of power are also produced in Quebec for export to Ontario.

* The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

Table 12 shows statistics of publicly owned central electric stations by province for 1952 and 1953. Table 14 gives comparable statistics for private stations.

¹ Figures include Newfoundland since 1949.

The predominant position of Quebec in the electric power field can be seen from the figures of Table 14. Of the total power generated in Canada by all central electric stations in 1953, 40 p.c. was generated by privately owned stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the transfer in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company to the publicly owned Quebec Hydro-Electric Commission.

In 1953 all stations in Ontario, both private and public, produced a little more than one-half as much power as Quebec stations. Of the total for Ontario stations 10 p.c. was produced by privately owned stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized by provinces in the following paragraphs. Certain privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland. The largest water power development in the Province is located at Deer Lake. The plant, which is operated by Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 154,000 h.p. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper and also supplies electric power to the Buchans Mining Company for its mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections.

The Anglo-Newfoundland Development Company Limited develops hydro-electric power at two plants situated at Grand Falls and Bishop's Falls with a total capacity of 59,900 h.p. The Company utilizes most of its hydro-electric power in the manufacture of pulp and paper and supplies light and power to the towns of Grand Falls, Bishop's Falls, Botwood and adjacent communities.

The Newfoundland Light and Power Company Limited has seven plants that develop hydro-electric energy with a total installed capacity of 55,400 h.p. It distributes electricity to the city of St. John's and the town of Bell Island and the iron mining operations there.

The United Towns Electric Company Limited operates seven plants, of which five are located at Conception Bay and two on the Burin Peninsula. The Company sells light and power to communities on the Avalon and Burin Peninsula. It developed 28,089,415 kwh. during 1954. The West Coast Power Company, a subsidiary of the United Towns Electric Company, operates a plant on Lookout Brook, a tributary of Flat Bay Brook which flows into St. George's Bay. It generated 16,790,700 kwh. in 1954.

The Iron Ore Company of Canada operates a plant at Menihek Rapids on the Ashuanipi River in Labrador. The plant has an initial installation of 12,000 h.p. with provision for two additional units. It serves the new iron ore mining centre of the Iron Ore Company near Knob Lake.

Two small companies, the Clarenville Light and Power Company and the Union Electric Light and Power Company Limited, operate plants at Clarenville and Port Union, respectively.

Nova Scotia.—Legislation relating to the use of water power was first enacted in Nova Scotia in 1909 under "An Act for the Further Assistance of the Gold Mining Industry". In 1914 legislation was passed initiating the development of water power in the Province and this was carried on in an investigatory manner in co-operation with the Federal Government until 1919 when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is being carried on in Nova Scotia by the Federal Government in close association with the Commission and the control of the water resources of the Province is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays regular fees for water rights.

The function of the Commission is to supply electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing for financial assistance to equalize cost and revenue of extensions, the construction of which has been approved by the Governor in Council as qualifying under the Act. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the Province.

Financially the Commission is self supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1954 showed total fixed assets of \$39,485,348 including work in progress amounting to \$2,437,659. Current assets amounted to \$586,682. Liabilities are shown as follows: fixed \$32,584,340; current \$1,603,900; contingency and renewal reserves \$3,812,651; sinking fund reserves \$6,297,562; and general reserves and special reserves \$1,928,347.

The initial development of the Commission was an 800 h.p. installation on the Mushamush River which went into operation in 1921 and delivered 208,752 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, reaching 101,450 h.p. in hydraulic turbines, 3,177 h.p. in diesel units and 21,125 kw. in steam turbines by Nov. 30, 1954 with a total generation for that year of 449,872,318 kwh.

The territory of the Commission extends over the entire Province and embraces nine systems which include 24 generating stations and 4,280 miles of transmission and distribution lines through which 53 wholesale and 28,772 retail customers received 431,871,084 kwh. during the year ended Nov. 30, 1954.

The installed capacity and annual output of the various systems of the Nova Scotia Power Commission are given in Table 15.

15.—Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1954

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act 1920. Generating stations owned by the Commission are as follows:—

Plant	Type	Capacity	Plant	Type	Capacity
		h.p.			h.p.
Musquash.....	Hydro.....	9,320	St. Stephen.....	Diesel.....	2,800
Tobique.....	Hydro.....	27,000	Campobello.....	Diesel.....	300
Grand Lake.....	Steam.....	58,700	Grand Manan.....	Diesel.....	900
Saint John.....	Steam.....	21,500	Shippegan.....	Diesel.....	2,500
Chatham.....	Steam.....	16,800	St. Quentin.....	Diesel.....	750
			TOTAL CAPACITY.....		140,570

All generating units, with the exception of diesel plants at St. Quentin, Campobello and Grand Manan, are interconnected in a Province-wide grid system.

The statistical information given in Table 16 shows the growth of the Commission's undertakings since 1950.

16.—Growth of the New Brunswick Electric Power Commission, Years Ended Oct. 31, 1950 and Mar. 31, 1951-54

¹ Five months—Nov. 1, 1950 to Mar. 31, 1951. The Commission's fiscal year-end changed in 1951 from Oct. 31 to Mar. 31.

Quebec.—*The Quebec Streams Commission.*—Created by S.Q. 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (R.S.Q. 1925, c. 46) and 20 Geo. V, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the Province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. It has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water power sites and determination of the longitudinal profile of a large number of rivers.

From 1912 to 1925 a number of storage reservoirs were built or acquired by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have, under the R.S.Q. 1925, c. 46, built the necessary dams; such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons. The Commission now controls and operates 28 storage reservoirs in the Province.

Among the rivers controlled by the Commission, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, are: the St. Maurice, now developing 1,538,150 h.p.; the Gatineau 528,000 h.p.; the Lièvre 274,000 h.p.; the St. Francis 100,000 h.p.; the Chicoutimi 41,400 h.p.; the Au Sable 33,200 h.p.; and the Métis 15,700 h.p. The Commission also operates nine reservoirs on North River, two in the watershed of the Ste. Anne-de-Beaupré River, and one at the outlet of Lake Morin, on Rivière-du-Loup (lower).

Reservoirs not Controlled by the Quebec Streams Commission.—Among storage reservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; the Témiscouata Lake on Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the Federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of 1,950,000 h.p. now that the Chute-à-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by S.Q. 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944 in accordance with the provisions of this Act, the Commission took over: (a) the system of Montreal Light, Heat and Power Consolidated for the generating and distribution of electricity; (b) the undertaking of the Montreal Island Power Company for the generating and distribution of electricity; and (c) all the shares of the capital stock of the Beauharnois Light, Heat and Power Company. Thus the Quebec Hydro-Electric Commission now controls among other assets the following hydro-electric plants:*

<u>Plant</u>	<u>River</u>	<u>Installed Capacity</u>
		h.p.
Cedars.....	St. Lawrence.....	206,400
Sault-au-Recollet.....	Rivière-des-Prairies.....	45,000
Beauharnois.....	St. Lawrence.....	1,400,000
Rapid VII.....	Upper Ottawa.....	64,000
Rapid II.....	Upper Ottawa.....	32,000

The Commission operates a public utility system which supplies electric light and power requirements to Metropolitan Montreal and surrounding districts, embracing a population of nearly 2,000,000. From the Cedars plant electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 h.p. to Massena, N.Y., and 250,000 h.p. to Ontario.

17.—Growth of the Quebec Hydro System 1945-54

NOTE.—Figures for the years 1935-44 will be found in the 1950 Year Book, p. 572.

In addition to these generating and distributing systems the Quebec Hydro-Electric Commission owns the 64,000 h.p. upper Ottawa River plant at Rapid VII, the 32,000 h.p. Rapid II plant and also the Dozois Reservoir. Average primary power capacities for this Northern Quebec System (Cadillac-Noranda district) are 1950, 35,500 h.p.; 1951, 30,550 h.p.; 1952, 29,200 h.p.; 1953, 54,000 h.p.; 1954, 80,000 h.p.

* The Commission also purchases 135,000 h.p. from the Shawinigan Water and Power Company.

Ontario.—The Hydro-Electric Power Commission of Ontario was created in 1906 by an enactment of the Ontario Legislature. In its creation consideration was given to the recommendations of advisory commissions previously appointed in response to public demand that the water powers of Ontario should be conserved and developed for the benefit of all the people of the province. The Commission operates under the authority of the Power Commission Act (7 Edw. VII, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified by numerous amending Acts (R.S.O. 1950, c. 281).

Prior to the 1955 session of the Legislature, the Power Commission Act stipulated that the Commission shall consist of three members appointed by the Lieutenant-Governor in Council, that one commissioner must be and that two may be members of the Executive Council of the Province of Ontario. At the 1955 session however the Act was amended to provide for an increase in the membership of the Commission to six persons. The Lieutenant-Governor in Council may name one of the members of the Commission as Chairman.

The Commission is a corporate entity, a self sustaining public concern endowed under the Power Commission Act with broad powers to produce, buy, and deliver electric power throughout the Province and to exercise certain regulatory functions with respect to the large group of municipal electrical utilities which it serves. The enterprise administered by the Commission is generally referred to as Ontario Hydro.

Initially the undertaking proposed to purchase a block of 100,000 h.p. from the Ontario Power Company Limited at Niagara Falls and to distribute this to 13 municipalities which had signed the original contracts with the Commission to take power at cost. Construction of a transmission system to distribute power to the member municipalities was begun in 1909 and, by the end of 1910, power was being supplied to several municipalities through what was known as the Niagara System. In northwestern Ontario the Thunder Bay System was inaugurated when the Commission built a short transmission line and a substation to serve Port Arthur with power purchased from the Kaministiquia Power Company.

The establishment of the original Niagara System was followed in 1911 by the formation of the Severn System and subsequently of other systems to serve groups of municipalities in various sections of the Province. In 1924 the Severn and two other systems were consolidated to form the Georgian Bay System and in 1929 and 1930 a consolidation of four systems created the Eastern Ontario System. In 1944 the Southern Ontario System came into being through the consolidation of the Niagara, Georgian Bay, and Eastern Ontario Systems.

The Commission continued to operate the Thunder Bay System in the northern part of the Province and in addition it undertook during the 1930's to operate, in trust for the Provincial Government, a group of unconnected systems serving mainly mining and pulp and paper industries, and known as the Northern Ontario Properties. In 1945 its services in northern Ontario were further extended by the purchase of the power system of the Northern Ontario Power Company Limited. On Jan. 1, 1952 the Northern Ontario Properties and the Thunder Bay System were merged for financial and administrative purposes and the consolidation continues to be known as the Northern Ontario Properties.

For the financial and administrative purposes of the Commission, the Province is divided into two parts: that lying south of a line drawn approximately west from Mattawa on the upper Ottawa River to Georgian Bay is served by the Southern Ontario System; the part lying to the north is served by the Northern Ontario Properties. The total area is in turn subdivided into nine regions, seven in the south and two in the north, with regional offices located strategically in nine major municipalities. The Southern Ontario System is a fully integrated co-operative power system. Primarily it serves a group of 318 municipalities receiving power at cost under contracts established according to the provisions of the Power Commission Act. In the Northern Ontario Properties, each of the two regions which at present correspond with the Northeastern and Northwestern Divisions is an integrated power system as the result of the gradual consolidation of several formerly isolated systems. There is no interconnection between the Northeastern and

Northwestern Divisions but there are facilities for the interchange of power between the Northeastern Division and the Southern Ontario System. The Northern Ontario Properties is not a co-operative system although it does serve a group of seven municipalities in its Northwestern Region on a cost-contract basis. Apart from the supply of power to these cost-contract customers, the Northern Ontario Properties are held and operated in trust for the Province of Ontario. The basic principle governing the financial operations of the undertaking is that electrical service is provided by the Commission to the municipal electrical utilities, and by them to their customers at cost.

The Commission's total cost of operation includes the power it purchases, all charges for operation and maintenance of the power systems, interest, and reserve provisions for depreciation, contingencies and stabilization of rates. A sinking fund reserve is also included for the retirement of the Commission's capital debt. The enterprise from its inception has been self supporting, except for the Provincial Government assistance of 50 p.c. of the capital cost of rural distribution facilities, undertaken in pursuance of the Province's long established policy of assisting agriculture. The Province also guarantees the payment of principal and interest of all bonds issued by the Commission and held by the public.

The undertaking as a whole involves two distinct phases of operations:—

(1) Provision of power supply—either by generation or purchase—and its transformation, transmission and delivery in *wholesale* quantities to municipal electrical utilities, certain large industrial customers and rural operating areas. This phase of operations is performed by The Hydro-Electric Power Commission of Ontario. (2) The *retail* distribution of electric energy. In most cities and towns, and in many villages and certain township areas, retail distribution of electric energy is conducted by municipal commissions under the general supervision of The Hydro-Electric Power Commission of Ontario as provided for in the Power Commission Act and the Public Utilities Act. These local commissions own and operate their own distribution facilities. In a small group of municipalities The Hydro-Electric Power Commission of Ontario owns the distribution facilities and conducts retail distribution through what are called local systems. Throughout most of rural Ontario the Commission, on behalf of the respective townships, operates the distribution facilities and attends to all physical and financial operations connected with the retail distribution of energy to customers in the rural operating areas. Since 1944 the rate structure applying to rural customers designated as farm, hamlet, commercial, and summer service has been uniform throughout the Province.

The growth of Ontario Hydro's physical and financial resources reflects the remarkable industrial and social development of the Province. In 1914 the Commission purchased its first generating station, Big Chute on the Severn River. Later in the same year the first Commission-built generating station, at Wasdell Falls, also on the Severn River, was placed in service. The program of purchase and construction of generating stations reached a climax in the great Queenston-Chippawa development, later renamed Sir Adam Beck-Niagara Generating Station No. 1 on the Niagara River in honour of the first Chairman of the Commission. This station first delivered power in 1922 but four years later the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing power demands—demands that have continued to increase over the years.

In 1954 the primary and secondary load carried reached a total of 3,778,744 kw. and a total of 22,386,456,876 kwh. was supplied during the year from all the Commission's resources generated and purchased.

In the ten years since the end of World War II the Commission has carried out a most aggressive program of new construction to provide for increasing power requirements. The capacity of resources generated and purchased more than doubled during this period. Among the generating stations contributing to this remarkable growth are three large hydro-electric stations on the upper Ottawa River, two hydro-electric stations in northern

Ontario, two large fuel-electric stations at Toronto and Windsor respectively and the Sir Adam Beck-Niagara Generating Station No. 2. The program, with allowances for revisions in the capacity of some sources, has served to bring the dependable peak capacity at the end of 1954 to 4,135,050 kw., an increase of 569,700 kw. over the capacity in 1953 and of 2,197,550 kw. over the capacity in 1945.

During 1954 construction was completed for the major hydraulic features at Sir Adam Beck-Niagara Generating Station No. 2 and seven units were in service by the end of the year. Meanwhile excellent progress was maintained in the construction of the powerhouse and the pumped storage scheme. Initially twelve units will be installed at the station, to be followed by the incorporation of the pumped storage scheme. Eventually four more units will be added at the main generating station as required.

The remedial works above the falls in the Niagara River required under the terms of the Niagara Diversion Treaty of 1950 are being undertaken by the United States Corps of Engineers on the United States side of the River and, on the Canadian side, by Ontario Hydro. The whole cost will be shared equally by Canada and the United States. The works include excavations on both sides of the River, a rock-faced retaining wall and some fill on both sides of the Horseshoe Falls, and a control structure on the Canadian side. Excavation on the United States side was completed in 1954 and construction of the control structure by Ontario Hydro was well under way.

In northwestern Ontario two additional units were installed at Pine Portage Generating Station to complete the construction work planned at this station and construction was proceeding rapidly for the Commission's new station at Manitou Falls. A significant extension was made to the Commission's facilities for the interchange of power by the construction of a second 115 kv. line between the Southern Ontario System and the North-eastern Division of the Northern Ontario Properties.

The 1955 Year Book, at pp. 549-553, contains a general descriptive article on the St. Lawrence Power Project, on which commencement of construction on Aug. 10, was marked by an international ceremony. Although this Project is a separate undertaking from the St. Lawrence Seaway, the planning, construction, and operation of both must be carefully co-ordinated. Construction of the Seaway is the responsibility of authorities created by Canada and the United States. The Power Project is being built by Ontario Hydro and the Power Authority of the State of New York and is subject to the approval of a Joint Board of Engineers appointed by the Governments of Canada and the United States. Ontario Hydro and the New York State Power Authority will share equally in the cost of constructing the development, exclusive of the cost of powerhouse machinery and equipment which will be borne by the respective entities. The generating station on the Canadian side will be known as the Robert H. Saunders-St. Lawrence Generating Station in honour of a late Chairman of the Commission.

Preparatory construction work on the St. Lawrence Power Project was carried on during 1954. During the period when navigation was closed two access tunnels and a retractable Bailey bridge were constructed to provide access to the site without interference to the movement of ships through the Cornwall canal. Meanwhile construction of cofferdams proceeded and upon completion, in the early summer of 1955, dewatering of the site was begun.

The Power Project on the St. Lawrence River is the last major hydro-electric site available to the Commission in southern Ontario. To provide for future needs the Commission must look to new resources that may appear to be less economical than those now in use or under construction. These may be hydro-electric resources located at greater distances from load centres or fuel-electric resources using coal, oil or gas. The relative scarcity of these fuels in Ontario however gives added importance to the studies being carried out with regard to the feasibility of generating electric power from nuclear reactors using fuels that are, by contrast, available in abundance in Canada. Atomic Energy of Canada Limited and members of the Commission's staff have participated in these studies which have resulted in the initiation of a project to construct a small nuclear power plant in which the Commission and the Canadian General Electric Company Limited are associated

with Atomic Energy of Canada Limited. The Commission and the Canadian General Electric Company Limited, through representatives of their technical personnel, are actively participating in this project and are also contributing financially to the undertaking. The nuclear power plant will be located close to the Des Joachims Generating Station on the Ottawa River and its output will be fed into the Southern Ontario System. This joint enterprise, as well as being a productive undertaking, will provide a significant demonstration of the application of nuclear science for constructive and peaceful purposes.

The balance sheets of The Ontario Hydro-Electric Commission show that fixed assets at cost at Dec. 31, 1954 amounted to \$1,468,558,729 including rural assets of \$182,467,127. The accumulated reserve for depreciation of fixed assets was \$154,975,237. Total assets of the Commission, allowing for the deduction of accumulated depreciation, amounted to \$1,653,063,771.

In 1954 a total of 338 municipal electrical utilities purchased power from the Commission under cost or fixed-rate contracts for retail distribution to their customers. These utilities had fixed assets at cost amounting to \$243,525,699 against which there was an accumulated reserve for depreciation of \$58,973,785. Municipal assets after deduction of this depreciation reserve amounted to \$382,710,021, of which \$152,461,822 represented the equity acquired in the Commission's systems by those utilities operating under cost-contracts.

¹ Dependable peak capacity—the amount of power subject to periodic change as equipment and water conditions vary, which the source is expected to be able to supply at the time of the system's peak demand. For the Commission owned or Commission operated generating stations, it is presumed that all units are available and that the supply of water is normal. Contractual stipulations govern the capacities of sources of purchased power.

Manitoba.—The Manitoba Power Commission was established in 1919 for the purpose of distributing electric energy, both wholesale and retail, throughout the Province, with the exception of the Metropolitan Winnipeg area. The utility currently operates under the Manitoba Power Commission Act (R.S.M. 1954, c. 203), as amended.

The Commission's supply of electric energy for distribution is purchased at various points, chiefly in or near the city of Winnipeg and arrangements between the Province of Manitoba and the Winnipeg Electric Company for the purchase of power are contained in the Seven Sisters Agreement of 1928. The Commission has gradually acquired practically all of the municipally owned and privately owned generating plants operating within its jurisdiction and has spread a network of transmission lines across the Province. All energy distributed is now generated by hydro power.

The Commission's program was started in the 1930's and, designed to bring hydro-electric power at uniform service rates to all rural centres of 20 population or over, is now virtually complete and currently serves 496 centres. In 1942 the Manitoba Electrification Enquiry Commission was appointed by the Provincial Government to study the feasibility of widespread farm electrification in the Province. It was concluded that, with the Manitoba Power Commission's network of transmission lines as a source of supply and with the economy in design of farm lines that had been worked out, it would be practicable to bring the benefits of hydro-electric power to over 90 p.c. of the farms in the Province, provided the farmers themselves were prepared to assist in certain organizational and operational matters. A test program undertaken in 1945 proved successful and thereafter the Commission conducted annual programs of farm electrification. By 1948 the Commission's annual goal of 5,000 farms was achieved and the program proceeded at that rate. Manitoba's farm electrification project on an area-coverage basis is now complete. The Manitoba Power Commission has connected electrical service to about 42,000 farms, or 80 p.c. of the total farms of the Province. Over 90 p.c. of the population of Manitoba are in areas where central electric station power is now available to them and the Commission serves more than 101,000 customers. The only farms remaining to be served are those in isolated pockets that may feasibly be added to the Commission's system and farms in areas already served by electric power but whose operators have not yet availed themselves of the opportunity of taking service.

Saskatchewan.—The Saskatchewan Power Corporation, established Feb. 1, 1949, operates under the provisions of the Power Corporation Act, 1950 (S.S. 1950, c. 10), as amended. It succeeded the Saskatchewan Power Commission which operated from Feb. 11, 1929 to Jan. 31, 1949. The main functions of the Corporation are the generation, transmission, distribution, sale and supply of electric energy and steam. Since 1952 the Corporation has been authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas.

Particulars of the operations of the Saskatchewan Power Commission during the period 1929 to 1948 and of the operations of the Saskatchewan Power Corporation during 1949 to 1953 are given in earlier editions of the Year Book.

The Corporation is experiencing extensive growth. In 1953 it served 661 urban communities (with six or more customers) in retail sales and three urban communities (Saskatoon, Swift Current and Battleford) in bulk sales. Activities of the Corporation are extended to the entire Province with the exception of such cities as Regina and Weyburn which own and operate municipal plants and distribution systems and Moose Jaw where the local plant and distribution system is owned and operated by National Light and Power Company Limited. A number of small communities, the largest being the town of Kamsack, are not yet served by the Saskatchewan Power Corporation. Some of these utilities, mostly privately owned, were taken over by the Corporation in 1954.

At the end of 1954 the Corporation served 134,587 customers, of whom 23,580 were located in communities which were supplied with power in bulk sales and 111,007 were Corporation retail customers. The latter comprised 87,142 customers in communities

considered as urban and 23,865 customers classified as rural, predominantly farmers. During 1954 all these customers absorbed 472,763,014 kwh. of which 429,171,476 kwh. were generated in Corporation plants and 43,591,538 kwh. were purchased in bulk from Regina and from National Light and Power Company utilities. At the end of the year the investment of the Provincial Government in Corporation assets amounted to \$58,947,187.

During 1954 the Saskatchewan Power Corporation owned and operated four steam generating plants (at Estevan, North Battleford, Prince Albert and Saskatoon) and 10 diesel plants with capacity of over 500 kw. each (at Assiniboia, Hudson Bay, Maple Creek, Meadow Lake, Moosomin, Shaunavon, Swift Current, Unity, Wynyard and Yorkton). The total available capacity of the Corporation in generating plants at the end of 1954 was assessed at 160,080 kw., of which 139,100 kw. was located in steam plants and 30,980 kw. in diesel plants.

At the end of 1954 the Corporation owned and operated 25,356 miles of transmission and rural lines. Of this total 6,475 miles of line were added to the system in 1954 comprising 315 miles of 72,000 volt line, (Saskatoon-North Battleford, Estevan-Red Jacket, Weyburn-Assiniboia, and Cantuar-Fosterton), 310 miles of 25,000 volt line, and 5,850 miles of 14,400 volt line in connection with rural electrification. Large substations were built in 1954 with a total capacity of 38,000 kva.

23.—Growth of Saskatchewan Power Corporation (formerly Commission) 1945-54

Alberta.—Public ownership of power generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the Province: Calgary Power Limited, Canadian Utilities Limited, and Northland Utilities Limited. A synopsis of these services is given below.

Calgary Power Limited.—This Company has nine hydro generating plants on the Bow River and its tributaries, west of Calgary, namely: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle, Three Sisters and Bears paw. At Dec. 31, 1953 the Company's total plant capacity was 206,550 h.p. All the plants except Horseshoe Falls are operated by remote control from the Kananaskis Falls Plant.

The Company has four reservoirs on the Bow River and its tributaries:—

Lake Minnewanka.....	180,000 acre-feet
Interlakes (Kananaskis Lakes).....	90,000 acre-feet
Spray Lakes.....	200,000 acre-feet
Ghost.....	74,000 acre-feet

An agreement with the City of Medicine Hat provides an additional 33,500 h.p. to the Company from the city's steam plant. Power from these plants is fed into a transmission network which supplies the entire electrical requirements of the cities of Calgary, Red Deer and Wetaskiwin, about 379 towns, villages and hamlets, and a substantial industrial load in central and southern Alberta. This transmission network is also connected with the municipal utilities of the cities of Edmonton and Lethbridge, Canadian Utilities Limited at Drumheller, Vegreville and Vermilion, and the East Kootenay Power Company in the Crowsnest Pass.

During 1955 two additions to the hydro system are scheduled for completion; these are the Pocaterra and Interlakes hydro-electric plants of 18,500 and 6,900 h.p. respectively.

The Company has about 4,100 miles of main transmission lines and 675 miles of distribution lines extending from Westlock in the north, Milk River and Waterton in the south, and from Chauvin, Macklin (Sask.), Brooks and Bow Island in the east, to Nordegg, Banff and Crowsnest Pass in the west. The cities of Calgary and Red Deer, and the towns of Ponoka, Fort Macleod and Cardston are supplied on a wholesale basis, but all other points on the same system are supplied on a retail basis. At June 30, 1955 electric pumping service was being supplied to over 2,000 oil wells, as well as service directly to other sectors of the oil industry, such as gathering stations, refineries and pipeline pumping. Service was also provided to other industrial plants near Edmonton.

An extensive farm electrification program is in progress in Alberta and at Dec. 31, 1954 the Company was serving 22,561 farms. The program calls for the addition of from 3,000 to 4,000 farms each year for several more years. Calgary Power constructs, operates and provides for the engineering of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited), energy being supplied to the farm co-operative consumers at cost.

All statistics quoted are as at May 30, 1955 with the exception of the miles of line, which are quoted as at Dec. 31, 1954.

Canadian Utilities Limited.—Towns and villages to the north, east and west of Drumheller are supplied by a 19,000 kw. coal fired steam plant in that city. Towns and villages north and east of Vegreville are served by a 16,500 kw. plant in Vermilion having 9,000 kw. in gas fired steam equipment and 7,500 kw. in a gas turbine. Towns and villages east, north and west of Grande Prairie are served by two internal combustion plants. One, situated in Fairview, has 1,200 kw. in a natural gas unit—the other in Grande Prairie has 3,195 kw. in diesel and gas diesel installations. The Company has one plant in British Columbia—a 900 kw. gas diesel station in Fort St. John. There are tie lines with the Calgary Power Limited system at Vermilion, Vegreville and Drumheller. The Company serves over 32,900 customers in approximately 275 towns, villages and hamlets, including 108 Rural Electrification Associations in the Province, through a network of approximately 2,660 miles of transmission and distribution lines in addition to 5,300 miles of Rural Association lines. Since 1949 rural electrification in the territory served has been extended to farmers on a co-operative basis whereby the farm or Rural Electrification Association system is constructed and operated at cost for the farmer by the Company. Over 7,000 farmers are now receiving electric power service.

Northland Utilities Limited.—This Company, with headquarters at Edmonton, supplies electric energy to 5,923 consumers in 26 communities. Diesel generating plants are located at Jasper, Athabasca, High Prairie, McLennan, Peace River, Lac La Biche, Manning, Fairview and at Hay River, N.W.T. Low voltage transmission lines extending from these generating stations supply electricity to 707 farms and 17 villages. The Company also operates a hydro plant at Jasper.

Northland Utilities Limited serves 1,600 consumers with natural gas at Dawson Creek and Pouce Coupé, B.C. In Alberta natural gas service is supplied to 1,858 consumers in Fairview, Bluesky, Grande Prairie, Sexsmith, Rycroft and Spirit River.

British Columbia.—The British Columbia Power Commission was appointed Apr. 17, 1945 under the provisions of the Provincial Electric Power Act. Operations were commenced in August 1945 with the acquisition of electrical properties in several parts of the Province. The following statement shows the growth in the number of customers from 1947 to April 1955:—

Year Ended Mar. 31	Services Acquired	Services Installed	Total Services for Period	Cumulative Services to End of Period
	No.	No.	No.	No.
1948.....	1,000	3,431	4,431	27,470
1949.....	831	3,318	4,149	31,619
1950.....	4,686	3,321	8,007	39,626
1951.....	473	4,075	4,548	44,174
1952.....	103	2,600	2,703	45,912
Sold June 1951.....	—325	—640	—965	
1953.....	—	3,597	3,597	49,509
1954.....	—	3,264	3,264	52,773
1955.....	523	3,261	3,784	56,557

All phases of the Commission's operation continued to expand during the fiscal year ended Mar. 31, 1955. Greater milages of transmission and distribution lines were built than in any of the preceding three years and the additions in each type of circuit amounted to more than 10 p.c. of the previous totals. Power requirements increased by 18.3 p.c. over the previous year, an advance attributable almost equally to the energy needs of the power districts and the bulk sales customers. These figures correspond closely with the revenue growth from the two classifications and together average 15.8 p.c. Average monthly residential power use reached 233 kwh., an increase of 14 p.c. over 1954, and well over three times the figure of 74 kwh. recorded at the end of March 1947. Expenditures increased by 15.3 p.c. which compares favourably with the 15.8 p.c. rise in revenues for the period. The resulting operating surplus was \$652,188, an increase of 22.8 p.c. over the 1953-54 operating surplus.

Construction of two hydro-electric plants was completed in May 1955. The Puntledge River Development near Courtenay, Vancouver Island, adds 35,000 h.p. to the Commission's Vancouver Island system, heretofore served entirely by the 168,000 h.p. John Hart Development on Campbell River. Another Vancouver Island hydro development is under way on Campbell River. An initial installation of two generating units with a total capacity of 70,000 h.p. is scheduled for completion in the latter half of 1956, with a third 35,000 h.p. unit to follow later. A storage dam farther up Campbell River, at Upper Campbell Lake, has been authorized and is slated for completion in 1957, with additional storage and 70,000 h.p. generating capacity to follow at the same site in 1958.

The 5,500 h.p. Spillimacheen River Development replaced two diesel electric stations serving the Columbia Valley.

Expansion of diesel electric stations that serve areas where it is neither feasible nor possible to provide power from a hydro source continues, together with transmission and distribution extensions, as load growth indicates.

The Northwest Territories and Yukon Territory.—The Northwest Territories Power Commission was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self sustaining basis. By legislation passed in 1949 the Act was extended to include Yukon Territory.

The Northwest Territories Power Commission has authority to construct and operate power plants as required in a territory having an area of over 1,500,000 sq. miles. The Commission is continually investigating power needs in this large area and studying reports on hydro-electric power sites.

The Commission has a hydro-electric power development in operation on the Snare River about 94 miles northwest of Yellowknife, N.W.T. Power has been supplied from this plant to the mines in the Yellowknife area since the autumn of 1948 and in the summer of 1949 a transmission line connection was completed to augment the supply of power to the town of Yellowknife.

A diesel generating station and distribution system was put into operation at Fort Smith, N.W.T., in October 1950. This project supplies the various government establishments at Fort Smith, e.g., the Departments of Northern Affairs and National Resources, Transport, National Defence (RCCS), Health and Welfare, and Public Works as well as the Royal Canadian Mounted Police and private commercial consumers and residents of the settlement.

A hydro-electric development was completed on the Mayo River approximately six miles north of Mayo Landing, Y.T., in December 1952. This plant is delivering power to the mining developments in that area and to the settlement of Mayo Landing.

The total capital investment of the Commission as at Mar. 31, 1955 was approximately \$8,863,680.

Section 3.—Total Development of Electric Power from All Available Sources

In Section 1 of this Chapter total water power resources are given with the proportion that so far has been developed. Table 3 of that Section analyzes the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills and in other industries. This is useful but does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including stations under public ownership (provincial and municipal governments) and those under private ownership. Neither of these Sections however gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand certain central electric stations in the Atlantic Provinces, Ontario and the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes of course from central electric stations, the figures having been given in Table 4 of Section 2, p. 561. The total kilowatt hours of electric power generated by central electric stations, is divided into that generated from water power and that generated from thermal engines of all kinds.

Table 25 shows that total electric power generated by central electric stations in 1953 was 62,860,927,000 kwh. For a complete presentation the power generated by manufacturing industries for their own use and the power generated by the primary mining industry for use in its own operations must be added. There are a few other sources of electric energy included such as electric railways which produced 10,579,000 kwh. in 1953. This production has been taken into the annual total shown in Table 25. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for which no data are available.

25.—Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries 1944-53

NOTE.—Figures for the years 1927-43 will be found in the 1948-49 Year Book, p. 516.

CHAPTER XIII.—THE FISHERIES

CONSPECTUS

	PAGE		PAGE
SECTION 1. TRENDS AND DEVELOPMENTS IN THE FISHERIES INDUSTRIES.....	583	Subsection 2. The Provincial Governments.....	589
SECTION 2. GOVERNMENTS AND THE FISHERIES	586	SECTION 3. FISHERY STATISTICS.....	597
Subsection 1. The Federal Government....	586	Subsection 1. Primary Production.....	597
		Subsection 2. The Fish Processing Industry.....	603

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada has the enviable position of being the country closest to some of the world's most prolific fishing grounds and as a result is one of the world's principal fish producers and fish exporters. Rich harvests are drawn from both the Atlantic and Pacific as well as from many freshwater lakes and rivers.

An article on "Canadian Commercial Fisheries Resources" giving a detailed account of the Atlantic, the Pacific, the freshwater and the northern fisheries will be found in the 1955 Year Book, pp. 578-590.

Section 1.—Trends and Developments in the Fisheries Industries *

Nineteen fifty-four was a year of generally satisfactory progress in both the economic and the technological sense for the Canadian fishing industry. Total landings of fish and fish products amounted to slightly over 2,000,000,000 lb. with a gross landed value of \$98,000,000. Average returns, with few exceptions, compared favourably with those of 1953. Marketed value of 1954's production was recorded as \$164,000,000 with a record total value of exports of \$132,600,000. Substantial numbers of new vessels were added to the fleets on the Atlantic and Pacific coasts and fish processing capacity—especially that of fresh fish in the Atlantic area—was expanded.

Production on the Pacific coast in 1954 was highlighted by a record halibut catch and the heaviest catch of sockeye salmon since 1913. The herring fishermen in this area reported their first full calendar year's production since 1951. A total of 600,000,000 lb. of fish was landed with a gross landed value of \$34,500,000 and marketed value was \$69,000,000. New vessel construction in 1954 totalled 77 vessels.

The Pacific coast industry has developed into a well organized, modernly equipped industry—without special encouragement. The continued restoration of the Fraser River sockeye salmon run is perhaps the most important event which has occurred in the Pacific area and marks the climax of years of rehabilitation. The increasing demand however for the use of Pacific coast river systems for power and other purposes has caused foreboding about the future of some of the salmon stocks.

In the Atlantic area landings of cod and haddock increased significantly in 1954 especially on the northeast Newfoundland coast. Newfoundland fishermen landed 607,400,000 lb. of fish with a landed value of \$14,700,000 and a marketed value of \$28,000,000. Total landings of all species for the Maritime Provinces and Quebec amounted

*Prepared by F. H. Wooding, Director of Information, Department of Fisheries.

to 730,000,000 lb. with a gross landed value of \$36,000,000 and marketed value totalling \$75,000,000. A number of new long-liners and about thirty-six draggers of various sizes operated for the first time out of Atlantic mainland ports, six trawlers were added to the Nova Scotia fleet and eleven vessels were added to Newfoundland's offshore fleet. A new filleting plant was built on the mainland and operations were resumed at another. New freezing facilities were established in five localities in Newfoundland and construction of two more plants was well under way by the end of 1954. Existing processing capacity was expanded considerably throughout the area.

The most significant developments in the Canadian fishing industry in recent years have occurred in the sea-fisheries of the Atlantic coast. The widely dispersed character of the industry in this region and certain characteristic rigidities of a socio-economic nature have tended to retard development in some areas; although a fleet of larger sea-going vessels has grown steadily since World War II and processing capacity has expanded, nevertheless progress has been limited in geographic extent.

To encourage further development the Federal Government announced a policy of co-operation with provincial administrations in a positive program of modernization for the industry, since elaborated through study and experience. The plans and policies which have been developed vary among the several provinces and involve federal and provincial agencies as well as municipal agencies, private firms and individuals; they extend into the fields of education and social organization as well as industrialization proper. A number of projects have been started and others are in the planning stage.

In the Atlantic coast industry, direct forms of government activity include loan schemes, public works projects (for harbour improvement) and research and demonstration in the fields of marine biology and food processing technology. Much of the credit for the progress recorded to date should go to private enterprise—ranging from fishing skippers operating on a small scale to business and industrial firms representing relatively large aggregates of capital and management.

In the primary fisheries of the Atlantic coast region the inshore fishery has declined in most areas with the increasing emphasis on fresh-fishing operations on the offshore banks which has contributed to the expansion of the fleet of larger fishing craft. Each of the Atlantic coast provinces now has a program of fleet modernization, the new vessels being equipped with modern navigational and fish locating devices. An increasing proportion of the vessels are owned by the fishermen themselves. Moreover the trend toward concentration of fishermen in ports with fresh fish processing facilities is providing at least a partial solution to the obstinate problem of isolation.

The fish processing industry in the Atlantic region has also made impressive advances. Fresh fish processing capacity has expanded rapidly with the addition of new filleting and freezing plants in the Maritime Provinces, Quebec and Newfoundland. Existing plants have been adapted to turn out new products such as blocks of frozen fillets which are used in the manufacture of 'fish-sticks' in raw and precooked forms. Increasing emphasis is being placed on the quality of product and greater care is being taken to ensure sanitary conditions throughout the various processing stages.

Although production, to a considerable extent, has been shifted from the cured to the fresh product, salt fish production continues to be a major part of the industry in Newfoundland. The traditional home curing of fish is now giving way to mechanized operation, which gives promise of a standardized form of product. This in turn will enable the Newfoundland industry to compete more successfully with other salt fish producing countries and with the industry on the Canadian mainland.

There has also been considerable improvement in the method of transporting fish products and in their distribution through the wholesale and retail trade. New refrigerated storages provide inland centres with continuous supplies of nearly all species and products.

Greater care is being taken in the handling and transshipment of small lots so that fish products are now more readily available in the smaller inland urban communities. The retail trade appears to have a greater awareness of the potential market for fishery products and of the problems connected with handling them. Packaged fish in many forms from all the important fisheries of Canada are attractively displayed in modern retail stores. The effects of these improvements have been felt to some extent in the freshwater fishing industry and some development has taken place in the processing industry in the inland areas as well. Landings in the freshwater fisheries totalled 116,200,000 lb. in 1954 with a gross landed value of approximately \$12,700,000. Marketed value of the year's production was approximately \$19,600,000.

The progress in the Canadian fisheries outlined above has occurred in a favourable economic climate of general growth, a substantial rate of population increase and general expansion of trade. Intensified efforts on the part of industry and government have created opportunities for the Canadian fishing industry in domestic and foreign markets and in addition import restrictions were either removed or relaxed in a number of traditional markets during 1954.

Problems arising from the heavy stock of canned salmon in the early part of 1953, the oversupply of fresh and frozen groundfish filets in the latter part of 1953 and early 1954 and the difficulties in moving the 1953 production of salt fish were however causes of concern to the industry and there have also been short-run problems for a limited number of other species and products.

The Canadian fisheries industry exports about two-thirds by value of its annual production; since World War II, sales to the United States have increased to approximately 70 p.c. of total exports. This excessive dependence upon one export market affects all of the major fisheries of Canada and remains one of the unresolved problems facing the industry.

To meet commitments under international agreements (*see* p. 588), the Canadian Government has stepped up the pace of its research in the fields of marine biology and technology and in government fisheries administration. Administrative and organizational changes in the Fisheries Research Board of Canada of the Federal Department of Fisheries have brought this organization into closer relation with other branches of the Federal Service and with the fishing industry. Government bodies at all levels have become more conscious of the importance of the fisheries to the general economic welfare of many areas of Canada and have accordingly improved their administrative services to the industry.

In the socio-economic realm there is a deeper concern for the welfare of the primary producer, i.e., the fisherman. In 1954 a Federal Indemnity Fund was instituted to provide low cost vessel insurance to small boat fishermen on both coasts and insurance for loss of and damage to fishing gear is being provided on an experimental basis. This Fund provides a partial solution to the problem of loss compensation in circumstances and under conditions in which private insurance companies have found it impossible to operate except at very high cost. A Federal Act facilitates provision through the chartered banks of intermediate term credit loans to fishermen, to complement in part the long term loan services provided by several provincial governments for the purchase of vessels.

Much has been accomplished in the development of the industry but many problems remain. On the Atlantic coast in particular, greater concentration of fishing activities in ports with modern fish handling facilities is urgently needed, as well as considerable improvement in methods of processing and marketing fish products and in systems of grading and determining prices. Greater diversification of products is also necessary. Steps are being taken to bring the results of research to fishermen and to fish processors and handlers in the expectation that this knowledge will help in solving some of the problems outlined.

Section 2.—Governments and the Fisheries

Subsection 1.—The Federal Government*

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada. Under the Act, laws are made for the protection, conservation and development of the fisheries throughout the country. The provinces however have by agreement assumed administrative responsibilities in varying degree. Consequently though all the regulations governing fishing are made by the Federal Government the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done either by federal officers or by provincial officers, according to arrangements made with the different provinces and without duplication of staff.

Specifically all tidal or sea fisheries except those of Quebec are administered by the Federal Department of Fisheries while the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta look after their freshwater species. In British Columbia and Newfoundland provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service.

The work of the Federal Government in the conservation, development and general regulations of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

(1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Chief Supervisors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.

(2) The Fisheries Research Board of Canada with headquarters at Ottawa and seven stations across Canada.

(3) The Fisheries Prices Support Board with headquarters at Ottawa.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field, and is comprised mainly of a protection staff and an inspection staff. The protection officers, including those on the Department's 76 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant sections of the Meat and Canned Foods Act.

The conservation program is carried out by the Conservation and Development Service of the Department. Protection officers not only enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear but also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and the engineers of this Service construct fishways to enable fish to bypass dams. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

* Revised by the Department of Fisheries, Ottawa.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection and Consumer Service and fish inspection laboratories are maintained on the Atlantic and the Pacific coasts. This Service also has a staff of home economists in Ottawa who operate a test kitchen and carry out demonstrations and lectures on methods of preparing and cooking fish and fish products. Other home economists are located in the field.

Through the medium of printed material, films, radio and exhibitions, the Information and Educational Service of the Department informs the public on the various aspects of the industry and the work of the fisheries service with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in the United States and other markets for Canadian exports.

The Economics Service has two related fields of responsibility: (a) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (b) to carry out studies and investigations in the primary fisheries and the processing and distribution of fish products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the foreign trade branches of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to providing these regular services the Department assists the commercial fishing industry in several special ways. For the purpose of promoting efficient primary fishing operations and improving the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for bait-freezing and storage facilities on the Atlantic coast. For each new trawler built in Canada the owner is eligible for a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. An applicant wanting only one trawler may import a used one from the United Kingdom without having to lay down a new keel in Canada. This policy applies to ships purchased from any country entitled to most-favoured-nation treatment in accordance with Canada's obligations as a signatory of the General Agreement on Tariffs and Trade.

The Fishermen's Indemnity Plan affords low cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long standing need on the part of small scale individual fishermen. Vessels valued at from \$250 to \$7,500 may be insured with payment of a premium of 1 p.c. of the appraised value. As at Mar. 31, 1955 a total of 2,359 fishing vessels with an appraised value of \$3,936,607 were issued insurance under the Plan.

The lobster trap protection plan provides that generally speaking any lobster fisherman having 32 or more traps may obtain protection up to approximately 50 p.c. of their value for premiums ranging from 5 cents to 35 cents per trap, depending on the length of the season and on the value of the traps.

The Department also provides assistance in the education of fishermen by making payments to educational institutions that have agreed to carry out educational work among them.

The Fisheries Research Board.—The Fisheries Research Board of Canada was established in 1937 to succeed the Biological Board of Canada. The Board functions as the scientific arm of the Department of Fisheries and seeks to improve and expand Canadian fisheries through scientific research. It operates four biological research stations, two oceanographic groups, three technological research stations, an engineering service and a unit which devotes its activities to research on sea mammals and studies of fisheries in Canada's Arctic.

The Board consists of a full time chairman and up to eighteen members appointed by the Minister of Fisheries from among outstanding Canadian scientists in fields related to the Board's work and businessmen well acquainted with fishing and the fish trade.

The biological work of the Board is designed primarily to provide a general scientific basis for the conservation and the wise management of Canada's vast marine and freshwater fishery resources. Investigations include the life histories of the various species of commercial importance, their population dynamics, their diseases and enemies. Also investigated are positive cultural methods or 'farming' in areas where some control of the environment is possible, new fishing grounds are sought and experiments in improvement in fishing methods undertaken. The biological work on the east coast is divided between biological stations at St. Andrews, N.B., and St. John's, Nfld.; Arctic work is directed from Montreal, Que.; work on freshwater fishes is directed from a station in Winnipeg, Man.; and the west coast work is directed from a station in Nanaimo, B.C.

Oceanography includes the study of the biological, chemical and physical aspects of the marine and freshwater environments of fishes and other aquatic organisms of importance. This information is necessary to understand the occurrence and distribution of the fish and is carried out by the Board's two oceanographic groups, one on each coast.

The technological studies are aimed at making the best use of Canada's fish catches. Investigations are carried on towards improving methods of preserving and processing and in the utilization of fish wastes. In recent years considerable work has been done on mechanization to further develop higher efficiency in the industry. The technological work on the east coast is done at stations in Halifax, N.S. and Grand River, Que., with applied engineering work for Newfoundland being under the supervision of a unit in St. John's, Nfld. The work on the west coast is carried on at a station at Vancouver, B.C.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act, passed in 1944, this Board was set up in July 1947 to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of \$25,000,000 but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative and research activities. The work is closely integrated with that of the Department's Markets and Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

International Fisheries Conservation.—Fisheries regulation has been recognized for some time as important for the conservation of the resources of the high seas and international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International-Pacific Halibut Commission, concerned with the preservation of the halibut stocks of the North Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Commission, concerned with the conservation and development of the sockeye salmon of the Fraser River. Investigations carried out under the auspices of these Commissions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under the provisional Alaska Fur Seal Agreement Canada receives 20 p.c. of the fur seal skins taken annually by the United States Government from the Pribilofs. Only surplus animals are killed.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and Spain.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention will study the northern Pacific fisheries, determine the application of the treaty principles and will promote and co-ordinate the scientific studies necessary for ascertaining conservation programs.

The latest, and seventh, international fisheries agreement in which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research as well as in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted off the Newfoundland and British Columbia coasts.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The union of Newfoundland with Canada on Mar. 31, 1949 brought about a transfer of some responsibilities in fisheries administration. The Newfoundland Fisheries Board remained the agency of government in the supervision of salt codfish marketing but fish and plant inspection, operation of bait depots, etc., became the concern of the Federal Department of Fisheries. The Board, formerly responsible to the Government of Newfoundland through the Commissioner for Natural Resources, has been made responsible to the Minister of Trade and Commerce for Canada.

* Prepared by the respective provincial departments responsible for fisheries administration.

The Provincial Government is concerned mainly with improvement and development in fishing and production methods and has conducted experiments in long-lining and deep water trawling, in the construction of multipurpose fishing craft and in the exploration of potential fishing grounds. Steps are being taken to secure more efficient use of fisheries salt. Loans have been made available to processors for the establishment or development of fishing fleets and processing plants and to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production.

In 1951 the Governments of Canada and Newfoundland established the Newfoundland Fisheries Development Committee consisting of representatives of fishermen, processors and exporters, and of both Governments. The objective of this Committee was to establish the role of each sector of the industry and each government, jointly or severally, in the organization and development of the fisheries. Action has been taken by both Governments along lines recommended by the Committee in its final report of April 1953. The Newfoundland Fisheries Development Authority was set up by the Government of Newfoundland to carry out the Province's share of the development program, while the Department of Fisheries and co-operatives continues to administer provincial fisheries legislation and to undertake development work in collaboration with the Authority.

The inland waters of Newfoundland, which provide excellent sport fishing, are not commercially exploited to any significant degree. The lakes and ponds remain under the authority of the Natural Resources Branch of the Provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—passed under federal jurisdiction as a consequence of Union. Matters of conservation and guardianship are therefore mainly or wholly the concern of the Federal Department of Fisheries although, to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.—Tidal or sea fisheries as well as inland fisheries are regulated by the Federal Government. Through the Fisheries Division of the Department of Industry and Natural Resources the Province supplements the activities of the federal authority.

The major part of the revenue of the commercial fishermen of the Province has been provided by lobster, smelt and oyster catches. Recent developments however have increased activity in deep sea fishing. The deep sea effort centres mostly around 60 foot draggers which land their catch to filleting and production plants in the eastern section of the Island. Shore fishing for the same varieties is also carried out extensively by about 2,000 fishermen landing at various points around the shore.

Loan assistance is given to the fishermen for the purchase of boats and engines by the Fishermen's Loan Board of Prince Edward Island. Technical assistance to fishermen and industry generally is provided by the Fisheries Division of the Department of Industry and Natural Resources.

The streams of the Province are mostly spring fed and fairly constant in flow and provide excellent spawning grounds and nurseries for game fish, of which speckled trout are by far the most important. With such favourable conditions for reproduction the problem is to increase the production of trout of a size attractive to anglers. Comprehensive biological investigations are being carried on by the Fisheries Research Board to attain this objective by determining the most efficient procedure in stocking, managing and cropping. The Province provides the sites for these investigations and the Conservation and Development Branch of the Federal Department of Fisheries builds the necessary dams and supplies the fish required for experimental purposes.

The angling pressure in this Province is continuing to increase but many of the fertile and highly productive ponds have disappeared. To readjust this situation the Department has repaired dams and restored many ponds and thus opened to the public, subject to the prevailing fishery regulations, many angling areas.

Nova Scotia.—The basic responsibility for the administration of tidal and inland fisheries in Nova Scotia is undertaken by the Federal Government. The Province however supplements the activities of this authority through its Department of Trade and Industry. In practice a system of co-operative effort has been worked out between the two authorities with each free to carry out individual responsibilities and specific programs. Provincial activities fall into three sections: development, administration and research.

Development.—Development activities include engineering services, financial assistance to the fisheries industry generally, and educational services to the fishermen.

Engineering services are related to the design, construction and equipment of boats, vessels and fish processing plants. A marine engineer is employed for these services and for the extension of consultant services to all persons interested in the industry. Financial assistance is extended by way of loans for the construction and modernization of fish processing plants and to fishermen for the acquisition of boats and engines. Where the requirements of large new plants have exceeded the capacity of local authorities the Province has provided such utilities as water lines and rail sidings.

Educational services comprise instruction of fishermen in the care and maintenance of marine engines, in basic navigation and in the mending, design and construction of nets and other fishing gear. Short courses are conducted in the fishing ports by Department-employed instructors during the less active fishing seasons. This program is assisted by grants under the Canadian Vocational Training program of the Federal Department of Labour.

Administration.—The Nova Scotia Fisheries Act serves to supplement federal jurisdiction and is administered jointly by the Department of Trade and Industry and the Federal Department of Fisheries. The Act requires fish processing plants and fish buyers to obtain annual licences. These are issued by the Department of Trade and Industry only on the recommendation of inspectors of the Federal Department of Fisheries and the certification of the Department of National Health and Welfare as to compliance with standards of construction, operation and sanitation contained in federal regulations.

Information obtained from the licensing activities and other statistics supplied by the Federal Department of Fisheries enables the Provincial Department of Trade and Industry to handle inquiries about the fisheries industry.

Research.—Provincial fisheries research activities have been confined largely to the inland trout and salmon fisheries. The Department of Trade and Industry has carried out a five year program of water control on the LaHave River in the interests of salmon preservation and development; has undertaken experiments in fertilization of lakes and in partial poisoning of lakes to reduce the numbers of coarse fish competing with trout for the available food supply; and has conducted some special studies of trout populations and salmon migrations. Research activities of this nature have been continued under the direction of the Nova Scotia Research Foundation.

New Brunswick.—The commercial fisheries in New Brunswick are mainly administered by the Federal Department of Fisheries with particular attention to inspection of fish products and protection of certain species of fish and shellfish. However the Provincial Government, through the Department of Industry and Development, contributes greatly to the expansion of the fishing industry. Loans are provided to fishermen for the purchase of boats and engines, and to some fish processors for the construction and expansion of cold storage facilities.

Since 1946 over \$2,600,000 has been granted to bona fide fishermen of which over \$1,260,000 has been repaid. The Province has modernized the deep sea fishing fleet by the introduction of a most effective small dragger, 60 units of which are operating in the Gulf of St. Lawrence and four in the Bay of Fundy. To aid in the purchase of these draggers the Federal Department of Fisheries granted a subsidy of \$165 per gross ton.

The Provincial Government also provides for the development of inshore fisheries by performing experiments with new fishing techniques. Educational services are extended to deep sea fishermen by offering them practical instruction in basic navigation, rules of

the road, business administration, and care and maintenance of marine diesel engines. The Government recently introduced a Fish Inspection Act to provide for inspection of fish and fish products not intended for export outside the Province. The Provincial Department of Lands and Mines administers inland fisheries and issues fishery leases and angling licences.

Quebec.—The Minister of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department is composed of two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold storage plants for the freezing and preservation of fish. Since the erection of the first plant in 1932, the network has grown to 50 plants with a daily freezing capacity of 250 tons of fish and a storage capacity of 16,000,000 lb. These cold storage plants also perform a valuable service to fishermen by providing them with frozen bait. In addition the Department owns and maintains 115 snow houses where fish may be chilled before being sent to storage or filleting plants, 40 culling sheds, and two artificial drying plants where 6,000,000 lb. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspé for the administration of cold storage plants. Statistics are compiled by the Department of Trade and Commerce in co-operation with the inspectors of the Maritime Fisheries Division.

Fish inspection is carried out under federal and provincial legislation by provincial inspectors who are vested with additional powers for export purposes by the Federal Government.

Educational work among the fishermen and producers is also conducted by the Department in order to teach the latest methods of fish preparation and obtain high quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne-de-la-Pocatière conducts a four year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system fishermen are able to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and long-liners and assumes the building costs on a five year capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets as well as by exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds as well as experiments on seafish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and Magdalen Islands. This research has brought into use new types of fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and tributaries.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full time wardens are employed and licences are required for sport-fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the Province: St. Faustin, Lachine, Baldwin's Mills, Tadoussac and Gaspé. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, fingerlings and older fish.

The Department administers five parks or reserves in all of which, except for Mount Orford Park, excellent fishing may be found. The Gaspesian and Laurentides Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Four salmon streams, all under the jurisdiction of the Fish and Game Division are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River and the Matane River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the Province.

The Biological Bureau of the Province, located at the University of Montreal, and the big piscicultural laboratory at Quebec City, with its two stations for practical work located in the Trembling Mountain and Laurentides Parks, study problems connected with marine life.

Ontario.—The fishery resources of Ontario are administered by the Division of Fish and Wildlife, Department of Lands and Forests. The Division operates under the authority of the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment for about 4,000 persons directly and for many more indirectly, and produces an annual yield of from 35,000,000 lb. to 45,000,000 lb. of fish. The industry, although widely scattered throughout the Province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its whitefish, herring and blue pickerel. Lake Superior continues to be the leading producer of lake trout. Other principal species of fish taken commercially are: yellow pickerel, herring or ciscoes, sturgeon, pike, catfish (including bull-heads), carp and suckers. Many of the smaller inland lakes are commercially fished, especially those in the northwestern portion of the Province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60 foot tugs and types of gear also vary from the most common gill net, pound and trap nets, seines and baited hooks to small hand operated seines and dip nets. Fishing methods and equipment have been rapidly modernized during the past few years. Diesel driven steel-hull tugs have replaced steam driven wooden tugs. Such aids as depth sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Nylon gill nets are replacing cotton and linen nets and a very efficient and economical trap-net is gradually replacing the pound-net in Lake Erie and other waters.

Excellent co-operation and understanding of the complex problems involved in the administration and management of Ontario's freshwater fishing industry by the Government and the fishermen, through their local associations and the Ontario Council of Commercial Fisheries, is working to the advantage of the industry as a whole.

Angling.—In Ontario with its estimated water area of 64,441 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the Province including such species as lake, speckled, rainbow and brown trout, yellow pickerel, black bass, pike and maskinonge. It is difficult to measure the value of sport fishing to the Province but the annual revenue alone from the sale of angling licences (mainly to non-residents, as residents require a licence for Provincial Parks only) is in the neighbourhood of \$2,000,000.

To maintain Ontario's reputation for excellent game fishing the wise management of this renewable resource is a prime factor, and a well trained field staff of conservation officers and biologists is located in the Province's 22 forestry districts.

Provincial Hatcheries.—Ontario operates 28 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of the various species of both commercial and game fish. Hundreds of millions of fry and fingerlings, comprising whitefish, herring, pickerel, trout (lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche are distributed annually. Three of the finest trout rearing stations on this continent are located in Ontario at Dorion near Port Arthur, at Sault Ste. Marie and at Hill Lake near Englehart.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes where commercial fisheries problems are being investigated, and in inland waters where game fish populations are being studied. The Manitoulin Island station conducts studies relating to the removal and utilization of the less valuable species and the effects of this removal on stocks of the more valuable commercial and game species. In Algonquin Park a careful record of angling quality is kept for a number of test lakes to allow evaluation of management techniques. Certain of the more barren lakes are being treated with fertilizer to determine the effect on microscopic organisms and fish.

The habits of lake trout and eastern brook or speckled trout are being studied to provide additional information on the proper management of these species. Many authorities believe the increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay and North Channel) to be directly related and this has led to considerable joint research by the Ontario and Federal Governments and the State Governments in the United States. Co-operation is maintained by the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menace.

Established fish management principles are applied by biologists in the various forestry districts. The program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, sea lamprey control, creel census studies, fish tagging and other related subjects.

Manitoba.—For the calendar year 1954 the freshwater commercial fisheries of Manitoba, made possible by nearly 27,000 sq. miles of lakes and streams in the Province, yielded a catch of 28,445,000 lb. of choice edible fish, the market value of which was \$5,435,000. Fourteen varieties of fish make up the commercial catch, the most important, according to value, being pickerel, whitefish, sauger, pike and perch. In addition to commercial production, sport fishing yielded a considerable unrecorded poundage of fish.

Besides providing a large harvest of rich protein food the fisheries of Manitoba materially assist the balance of trade by the export of freshwater fish: it has been estimated that 90 p.c. of the Manitoba catch is sold to United States dealers. Employment in the fisheries is another important benefit, as in the actual fishing operations over 6,000 men are employed and at least a similar number find total or partial employment in the many industries which are dependent wholly or in part on the fisheries.

Since the fishing industry began in Manitoba approximately 75 years ago, the fishing equipment has been improved and methods of handling fish have changed to meet modern demands for a packaged product ready to serve or convenient to cook. Oars and sail have given way to high powered internal combustion engines and boats which can lift nets in almost any weather. Coarse linen gill-nets have also disappeared in favour of the finest of nylon gill-netting. In marketing, whole fish packed in ice is being replaced, in part at least, with a packaged filleted product, or even a precooked item such as 'fish sticks'. Throughout the fishing industry there is a keen appreciation of the necessity of producing a first quality product, convenient to prepare, attractively packaged, which will appeal to the eye, palate and the cook. The city of Winnipeg, it is thought, has become the largest freshwater fish marketing centre on the continent and the Provincial Department maintains a city patrol service to ensure, as far as is possible, that only fish of first quality is marketed or offered to the consumer. This patrol operates in co-operation with officials of the Federal Department of Fisheries.

To regulate the fishery operation and to ensure that seasons and limits are observed, the Fisheries Branch of the Department of Mines and Natural Resources operates a fleet of patrol boats in summer and a number of bombardier snowmobiles in winter.

Four fish hatcheries are engaged in the artificial propagation of pickerel and whitefish on commercial fishing lakes and a trout hatchery provides a supply of lake, rainbow and speckled trout for sport fishing waters at the northern extremity of West Hawk Lake in Whiteshell Provincial Park.

Saskatchewan.—The administration of fisheries in the Province of Saskatchewan comes under the Fisheries Branch of the Provincial Department of Natural Resources with head office at Prince Albert. Most of the fisheries resources are concentrated in the northern half of the Province where the lakes have always been a source of food to the fur traders, trappers, prospectors and the Cree and Chipewyan Indians who inhabit the area, and also provide food and supplementary income to the settlers and homesteaders on the agricultural fringe.

There are approximately 129 commercially fished lakes in the Province and the principal species of fish include lake trout, whitefish, pickerel, northern pike, sturgeon, cisco, Arctic grayling, goldeye, mullet, perch and burbot. The growth of the filleting industry has been of particular significance, 13 filleting and 11 packing plants having been established since 1945. That the fishery resources are important to mink ranchers in the Province is shown by the fact that in the year ended Mar. 31, 1954, 67 fur-farm fishing licences were issued and 26,981 mink were fed under these licences; 662 domestic licences and 1,543 free licences to Indians were also issued.

There has been marked development recently in sport fishing. In the fiscal year 1953-54 there were 61,384 resident and 6,650 non-resident angling licences sold, compared with 6,000 resident and 1,500 non-resident licences sold in 1945.

Emphasis in the fish cultural activities of the Province during the past few years has been on extending the range of the Arctic grayling species from the Far North into the Churchill River area, and to introduce eastern brook trout and certain warm water species into areas where preliminary study seems to indicate suitable environment. To a large extent the indiscriminate planting of fish has been discontinued. A fish hatchery is operated at Fort Qu'Appelle for the hatching of pickerel, rainbow, brown and lake trout, and two experimental ponds have been built to facilitate the study, under controlled conditions, of the introduction of warm water species from the United States. An experimental hatchery has been established at Lac la Ronge where Arctic grayling and lake trout eggs have been hatched, an Arctic grayling spawn camp in the Fond-du-lac River near Black Lake, and a pickerel spawn camp on the Montreal River near Lac la Ronge.

The management of the provincial water areas is conducted on a scientific basis. In 1947 a large-scale biological program was undertaken and more than 100 water areas have since been studied as to their productivity as well as to the interrelationship of the species and their life histories. In so far as known facts will permit, the management of the various lakes has been placed on a sustained yield basis. Experiments are in progress on the introduction of non-native species into suitable water areas. Where sport fishing pressure has increased, such as on Lac la Ronge, Last Mountain Lake and Qu'Appelle Lakes, a creel census has been established and the annual take is recorded. The Fisheries Laboratory, established in 1949 at the University of Saskatchewan, has three permanent biologists on its staff, and usually about 12 students of the University are employed each summer on biological surveys. The Fisheries Branch has conducted a program of education designed to acquaint people of the Province with the importance of scientific research and the necessity of certain regulations governing the administration of fisheries.

Alberta.—Commercial and game fishing are administered by the Fisheries Branch of the Department of Lands and Forests.

Regulations under the Alberta Fishery Act, designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported

by the Alberta industry. In line with a policy for producing good quality fish, lakes in which whitefish are infected with pike tapeworm and that do not meet the quality standard have been closed to commercial fishing.

Biological surveys of many lakes and streams taken over the last 12 years have provided an opportunity to observe the result of former management policies. It was found that traditional practices of trout-stream management, including close seasons, legal minimum, feeder streams closure and hatchery plants, were inadequate or incorrect.

A new management plan has been given several years trial on the South Saskatchewan river watershed. The main streams are continuously open; the smaller streams are opened and closed in alternate years. The plan appeared to provide satisfactory angling and was extended in 1955 to include the North Saskatchewan River and Red Deer River drainages.

The minimum size limit has been removed on all trout except lake trout. Close seasons for pike, walleye and perch have been abolished. The trout rearing facilities are used largely to produce fish for planting in small lakes and reservoirs previously barren of fish. It has been found that such waters produce very fast-growing trout and that a large proportion of the planted trout survives.

British Columbia.—The Provincial Department of Fisheries was organized in 1901-02 and soon became very active in fish cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking the administrative and regulative jurisdiction over the fisheries in British Columbia rests with the federal authority. When British Columbia entered Confederation in 1871 the Government of Canada undertook to protect, conserve and promote the fisheries of the province, and one of the important functions of the Provincial Department of Fisheries is to observe these aspects and to keep the Provincial Government informed through the appropriate Minister.

The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the Province, as are the shell fisheries such as oyster fishing and clam fishing in the tidal waters. The authority to administer and regulate these fisheries is vested in the Province although the regulations covering them are made under federal Order in Council on the advice and recommendation of the Province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net-fishing in the non-tidal waters of the Province, including commercial fishing, is regulated and administered by the Provincial Department of Fisheries, and authority for regulation of the game fisheries in the non-tidal waters is vested in the Game Commission, a branch of the Provincial Government administration. The Game Commission operates a number of trout hatcheries and egg taking stations for restocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the Provincial Department of Fisheries for regulation and control. Some research has been done on a few of the important species and more will be undertaken as required.

The Provincial Department of Fisheries has established a marine laboratory at Ladysmith on Vancouver Island for the purpose of conducting biological research into those species over which the Province has control, principally oysters, clams and other forms of shellfish as well as marine plants. This research is conducted with the object of encouraging the industry to produce better products more economically and of enabling the Department to regulate the various species so that maximum exploitation may be obtained on a sustained yield basis. The Department co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

Section 3.—Fishery Statistics*

Subsection 1.—Primary Production

The total marketed value of all fishery products in Canada (exclusive of Newfoundland) in 1954 was \$163,541,000, an increase of 9 p.c. over the \$150,453,000 marketed value in 1953, which in turn represented an increase of less than 1 p.c. over the \$149,821,000 recorded in 1952. The landings of fish (including Newfoundland) in 1954 totalled 2,039,567,000 lb. or 10 p.c. over the 1953 figure. Landings in 1953 were 1,857,197,000 lb., approximately 2,500,000 lb. less than in 1952. A substantial increase in landings in British Columbia in 1953 did not offset lowered production in the east coast fisheries. In 1954 all provinces except Quebec and Alberta showed an increase in landings. The east coast fisheries in general recovered from the 1953 decline though, except for Newfoundland, the recovery was not marked, Quebec in particular continuing to decline.

In 1953 the landings of fish in Newfoundland were listed at 510,096,000 lb., with a value to the fishermen of about \$12,208,000; in 1954 landings of 607,413,000 lb. had a value of \$14,704,000.

* Revised in the Fisheries Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

Excluding Newfoundland, three provinces accounted for 83 p.c. of the total marketed value of fisheries products in 1953; British Columbia's share was 44 p.c., a substantial decrease from the previous year, followed by Nova Scotia with 27 p.c. and New Brunswick with 12 p.c. Also excluding Newfoundland, the same three provinces accounted for nearly 84 p.c. of the marketed value of fisheries products in 1954; British Columbia's share was 43 p.c., New Brunswick's 14 p.c., and Nova Scotia's 27 p.c.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items and secondary products not specifically derived from one particular kind of fish are grouped in the item "Other".

4.—Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries 1949-53¹

(Exclusive of Newfoundland)

NOTE.—The quantity landed excludes the weight of livers but the value of liver products is included in the value for the species concerned.

SECTION 2. PROVINCIAL AND TERRITORIAL FUR RESOURCES AND MANAGEMENT.....	605	SECTION 5. MARKETING OF FURS.....	616
SECTION 3. FUR FARMING.....	611	SECTION 6. THE FUR PROCESSING INDUSTRY..	617

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—The Fur Industry

The fur industry, at one time the most vigorous and remunerative industry in Canada still contributes many millions of dollars annually to the national income. Until the end of the 19th century practically all Canadian furs were wild-caught and, although fur farming has since developed rapidly, trapping still provides nearly 57 p.c. of the income from raw furs produced in Canada.

Wild fur bearers are still taken, even in settled areas of this country, but the populations of such animals have in general been so reduced by the advance of settlement that the principal trapping areas now lie in the northern parts of the provinces and the Northwest Territories. Many wild animals, including some important fur bearers, are subject to marked fluctuations in numbers from year to year, and these fluctuations are often greatest and most nearly regular in northern regions. The number of pelts of certain wild species taken annually is notably affected by these fluctuations.

Another and perhaps more important factor governing the 'take' of furs from wildlife is the fluctuation in demand and in price consequent on changes in fashion. Thus the vogue of recent years for short haired furs has caused a decrease in demand for fox and other long haired pelts and a corresponding decrease in the number of such pelts taken by trappers. In areas such as parts of the Northwest Territories where these furs were formerly a staple source of income, this style change has resulted in serious hardship. This is a problem that cannot be solved by wildlife management practices.

The most important aspects of management of the fur trapping industry are: constant practical scientific research, maintenance of suitable habitat and its improvement where possible, sound and balanced regulation of the trapping of fur bearers, provision of competent and adequate field staffs, and free education of trappers with respect to the principles of wildlife management. By these means many areas depleted of fur bearers have once again become productive. Such means will become increasingly important in maintaining Canada's position as a major producer of raw furs.

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of Yukon Territory and the Northwest Territories which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (*see pp. 34-35*) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems.

Section 2.—Provincial and Territorial Fur Resources and Management*

Newfoundland.—The Province of Newfoundland, stretching 900 miles northward from a latitude of 47° N. has climatic and habitat conditions suited to the raising of wild fur-bearing animals. The Island supports beaver, muskrat, marten, otter, lynx, fox, ermine and mink. Mink are not indigenous to the Island but were introduced since 1935 through animals escaping from mink ranches. The Labrador area also is noted for its fine furs, particularly Labrador mink, and muskrat, marten, otter, beaver, fox, lynx, ermine and red squirrel are numerous enough to warrant trapping.

Wild fur trapping was a basic autumn and winter employment in the Province before World War II but defence construction and maintenance and industrial expansion so changed the economy of the people that trapping is now purely a part time occupation engaged in only when other employment is not available, and few members of the younger generation are now receiving the training necessary to the successful trapper.

Throughout the Province the long haired fur bearers were once the basis of the fur industry and the decline in the prices of their fur was mainly responsible for the decline in trapping. As a result the fox and lynx populations have built up so that they have assumed predator status and are not protected by regulations.

Beaver management was started in 1935 and the Island of Newfoundland was repopulated by the transfer of live animals. This program proved so successful that during four open seasons in the years 1946-53 the catch numbered 30,000 beaver valued at \$550,000. The success of this venture has led to the institution of a similar program in northern Labrador where the area north of the Hamilton River drainage has been without beaver for a hundred years.

Other fur bearers have not been managed except through the usual close seasons provided by regulations; for open seasons, regulations on fur bearing animals differ according to climatic zone and provide for the taking of animals only during that season when the fur quality of the pelt is at its highest.

Prince Edward Island.—Wild fur-bearing animals are very plentiful on Prince Edward Island. Red fox, skunk and raccoon have become so numerous and their depredations among Island poultry flocks so alarming that all protection has been removed and bounties are paid on all three species. Beaver too have increased to the point where they have become a nuisance in this highly agricultural province: they have plugged road and railway culverts and their dams have flooded pulpwood stands and extensive tracts of farmlands. There is now an annual open season on beaver (Nov. 10-Dec. 31) and some trapping permits are issued in the out of season period.

Ten years ago muskrats had become quite scarce but their population has increased and, being so easily trapped, they are now the best revenue producers. More than 3,000 of them are taken annually. Their increase is attributed largely to the shortening of the trapping season from Nov. 1-Mar. 31 to Nov. 10-Dec. 31 and the strict enforcement of trapping regulations, which prohibit the setting of traps within ten feet of a muskrat house or den or the damaging of it. Mink are also increasing in number and are protected by the same shortened trapping season as are muskrat. Mink moreover is the only fur bearing animal ranched to any extent in the Province.

Nova Scotia.—Nova Scotia is not a large producer of wild fur pelts. There is usually a six week open season (Nov. 1-Dec. 31) for mink, otter, weasel and muskrat. The present low market prices for long haired fur has discouraged the trapping of wildcat, fox and raccoon and these animals have been removed from the protected list. For the trapping of fur bearers other than beaver no licence is required.

* Provincial information received from the respective provincial governments and that for the Yukon and Northwest Territories from the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources, Ottawa.

Since 1931 the Department of Lands and Forests has been redistributing live beaver, which had been almost completely trapped out before that time. Today beaver is an important part of the trappers' catch in most of the counties of the mainland, where a ten day autumn season has been instituted. A few live beaver have also been introduced into Cape Breton Island but no open seasons have been proclaimed.

The red squirrel has become increasingly important as a fur bearer and in 1954 the laws were changed to permit trapping during the regular season and shooting during the rabbit season which lasts until the end of February.

In Nova Scotia trapping is not a full time occupation but is a source of additional income to guides, woods workers and farmers who live near fur producing areas.

Export figures are compiled as a byproduct of the collection of royalties on furs exported. Exports of wild animal furs in 1953-54 included: 29,498 deer hides, 553 red fox, 12 cross fox, 202 silver fox, 2,252 mink, 57,185 muskrat, 174 otter, 1,852 raccoon, 5,509 weasel, 248 wildcat, 82,743 red squirrel, 31 rabbit (snowshoe hare), 10 lynx, 3,165 beaver and a few pelts of skunk, seal, housecat, etc.

Quebec.—Fur from wildlife is still a very important asset to the Province of Quebec despite the invasion of the forest for industrial purposes.

The total number of pelts taken was 302,580 in the 1954-55 season. This number was lower than the 336,967 of 1953-54 but the value was higher—\$1,766,647 as against \$1,139,117 for the previous year.

The average value of each of the basic furs (beaver, mink, muskrat and weasel) was higher in 1954-55; white fox, fisher, otter and marten also advanced in price over 1953-54 but blue fox and lynx were lower. Prices of other types remained stable in both seasons.

Pelts produced in 1954-55 included: muskrat 122,709, weasel 47,973, squirrel 37,755, beaver 32,901, white fox 19,201, mink 17,470, seal 7,633, red fox 4,958, otter 3,127, raccoon 3,103, lynx 1,714, fisher 1,219, marten 738, cross fox 537, deer 439, skunk 389, blue fox 264, bear 257; and a few pelts of other types of foxes, lynx cat, polar bear and wolf. The tax rate per pelt varies from one cent on squirrel to \$2 on fisher. The royalties revenue to the Province on the total take of furs in 1954-55 was \$95,734.

The administration of the fur resources of Quebec is under the jurisdiction of the Department of Game and Fisheries. Under the game laws and regulations it is unlawful to hunt, catch or trap fur bearing animals out of season, or in season without a licence; to use poison to hunt or kill any animals; to destroy or damage lairs or burrows of fur bearing animals; or to keep in captivity, without special permit, any game protected by law. Regulations also cover the marketing of furs. It is not permissible to buy or sell any fur or pelt for commercial purposes without a licence; neither is it permissible to ship any fur outside the Province, or from one place to another within the Province, or to a tanner, without a permit attached to the bill of lading or without royalty having been paid and each pelt having been stamped or sealed.

By Order in Council of Aug. 17, 1945 the first registered game territory for trappers was set up by the Provincial Government in the Counties of East Abitibi and West Abitibi; in 1946 the County of Pontiac was organized, in 1947 Temiskaming and in 1952 the northern part of the County of Lavolette.

Regulations provide mainly that the land under lease must not exceed 50 sq. miles. The lessee, who pays an annual rental of \$10, is responsible for his own land which he must occupy 15 days before the opening of the trapping season and evacuate 15 days after its close. Each year he must make an inventory of his land and report on the location of the beaver huts thereon. He must hold a special permit to hunt beaver and must prove that there are at least five huts on his land. The quota allowed at the outset is one beaver per hut; as the population increases, the quota is raised to 1½ beavers per hut. Beaver pelts must be specially labelled before marketing.

The present registered game territory extends over 30,000 sq. miles. More than 400 trappers hold permits and the quota allowed for the capture of beaver, negligible at the outset, was 5,227 in 1953-54. Steps are being taken also to assist in the re-establishment of marten, the population of which has been steadily decreasing.

Ontario.—The fur and big game wealth of Ontario is administered by the Division of Fish and Wildlife, Ontario Department of Lands and Forests, under the authority of the Ontario Game and Fisheries Act, the Wolf and Bear Bounty Act, and regulations thereunder.

In the production of wild caught fur Ontario leads all other Canadian provinces. In the season of 1953-54 wild fur taken in Ontario was valued at almost \$4,000,000 and included pelts of 105,361 beaver, valued at \$1,385,497. Other important species in order of decreasing total value were muskrat, mink, otter, raccoon, fisher, weasel, marten, skunk, red fox and lynx.

The high production of wild fur in Ontario is attributed to the efficient system of fur management now in effect. Throughout most of the chief fur producing areas all trappers—the majority of whom are Indians—are holders of Registered Trapline Licences. Under this system each trapper is registered with the Province as the sole permittee on a defined trapping area. Thus competitive trapping has been almost entirely eliminated in all but the primarily agricultural areas of the Province and the Department is in a position to set quotas to restrict the annual take of the less abundant species during times of scarcity. Beaver, marten, fisher and lynx, comparatively rare in the Province a few years ago, have now attained populations which permit larger annual harvests to be taken than have been possible for many years.

Big Game.—An early and a late moose season in Ontario are designed to provide sport for hunters and meat for trappers. In some parts of the Province moose of any age or sex are legal game for the resident. In 1954 there were 7,502 resident moose licences and 735 non-resident licences sold. There was a known kill of 1,781 moose, made up of 1,340 bulls, 296 cows, 113 calves, and 32 unspecified.

Over 100,000 deer licences were sold in 1954 and about 30 p.c. of the hunters were successful in getting a deer. There is no open season on woodland caribou at present.

Manitoba.—Fur production and value declined in 1953-54. Wildlife fur taken during the year totalled \$1,574,467 as compared with \$2,116,157 in the previous year. This represented a 15 p.c. decline from the 1952-53 figure.

Registered trapline extension work continued, and major surveys were made in the middle west portion of the province, in preparation for the inclusion of this area in the registered trapline system in 1954-55. Estimated value of the 1953-54 crop from all registered trapline districts was \$152,400 as compared with \$265,666 in 1952-53.

Total wildlife fur production in 1953-54 included 23,324 beaver, 18,391 mink and 739,201 muskrats. Other fur taken is as follows: squirrel 110,010, weasel 62,862, jack rabbit 5,506, silver, blue, cross, white and red fox 2,086, otter 1,866.

The fur ranching industry maintained a high fur market value, and exceeded wildlife fur value for the first time in fur history. Total fur value for ranch bred fur was \$1,994,563.

Saskatchewan.—The wildlife fur industry in Saskatchewan has undergone a period of rapid reorganization in the past ten years. A policy of one trapper for each area has been inaugurated throughout the province, a system providing security for trappers on their traplines.

Unethical practices and lack of management brought beaver to virtual extinction in Saskatchewan by 1944 and the trapping industry in general had reached a low ebb. The Government in 1945 appointed a committee to consider this unfortunate condition and to recommend steps necessary to encourage and assist trappers dependent on fish and game for their livelihood particularly in isolated northern areas.

A Fur Marketing Service was established in Regina to give fur producers a local auction where their fur could be graded, displayed and sold to the highest bidder. In 1946 a Fur Conservation Agreement was concluded with the Federal Government by the Province in which the two Administrations agreed to spend certain moneys annually for the purpose of managing fur and game and improving wildlife habitat in the northern isolated areas for the benefit of the residents of those areas. The particular interest of the Federal Government in this region lay in the welfare of Treaty Indians who are their wards. Regulations under the Agreement gave Indians, métis and whites equal rights and security on their community, family or individual traplines. Local trappers' councils were elected by the trappers to act as spokesmen on their behalf when dealing with the Provincial Department of Natural Resources. During the subsequent five years 3,600 live beaver were moved from settled areas to new homes in the northern frontier where they were required for propagation purposes and for the improvement and maintenance of water levels. The result of this action has been a steady increase in the population of beaver, while the take has increased from approximately 400 pelts in 1943-44 to 51,700 in 1954-55.

The south Saskatchewan muskrat trapping program was inaugurated in 1946. Under this program each trapper in settled areas obtains a permit describing the area in which he is authorized to trap muskrats and the quota he may take from it—based on the number of houses and bank runs located therein. It is estimated that five muskrats per house will survive a winter and that three may be trapped, leaving the others for propagation. Thus general close seasons are a thing of the past and muskrats existing in any section may be trapped on the basis of the program. Average yearly production since 1946 has been almost tripled in relation to the average yearly production for a similar prior period. The 1955 crop numbered almost 1,965,000 muskrats, the fourth highest ever recorded in the Province.

Other fur bearers of economic importance are fisher, fox, lynx, marten, mink, otter, squirrel and rabbit. These animals have fluctuated in population as well as in pelt value in past years but the increased production of beaver and muskrat has helped stabilize the income of the trapper. Most fur prices have declined in recent years but the income received from Saskatchewan wildlife fur pelts has been maintained.

Badger, raccoon and wolverine are of little economic importance at present. Wolves and coyotes are on the predator list in settled areas as well as foxes and very comprehensive programs of control have been carried on to reduce the population of these animals.

By 1948 it was quite apparent that bounties did not have the desired effect of reducing the coyote population and a paid hunter program was introduced in co-operation with the rural municipalities, in which all field personnel were directly responsible to the Department of Natural Resources. Under strict supervision these men used guns, traps, cyanide guns or coyote-getters and poison. The program has been extremely successful and coyotes are no longer a problem in settled areas. In the autumn of 1954 the bounty on wolves was discontinued. Bait treated with poison, placed out on large lakes in isolated areas, is the present method of control of wolves. Here again only employees of the Department are allowed to handle the poison. This work is becoming increasingly important not only to protect game that is necessary to the welfare of people living in the north country but also to reduce the chances of spreading the rabies epidemic which has been apparent in the West during the past two years as well as hydatid disease which has been found in some species of big game.

The weasel is a valuable fur bearer as well as a controller of rodents and to increase its population there has been a demand to have the close season extended throughout the greater part of the settled areas. However closure in large areas does not seem to increase the weasel population and the Department is carrying on biological studies to ascertain the effect of trapping on these valuable fur bearers at various degrees of intensity over a period of years.

Alberta.—The current wildlife fur trade of Alberta depends mainly on the fine fur group consisting of muskrat, ermine, beaver, mink and squirrel. This group accounted for 97 p.c. of the total value of the 1953-54 catch. The depressed condition of the market for long haired coarse furred pelts including fox, skunk, lynx and rabbit has kept the trapping of these animals at a low level for some years. During the 1953-54 season the prices of furs generally remained low, except for a few species. Statistics show that more pelts were taken but the financial return to the trappers decreased.

Wildlife fur production in Alberta is controlled through the registered trapline system. Except for very slight fluctuations the number of registered traplines has remained fairly constant in recent years in the neighbourhood of 3,000, of which approximately 800 have been registered by Treaty Indians. The registration fee of \$10 per line is paid by the Federal Government on behalf of the Indians. The stabilized trapline situation is accounted for by the prevalence of both muskrat and beaver. Before the institution of the trapline system, the beaver was almost extinct in the Province, but in the ten years of beaver management the population has increased until it is now necessary to trap and remove beaver from areas where they are not wanted and where they cause considerable damage. Muskrat presents the same problem and if complaints, after investigation, are found to be justified special permits are issued for the removal of the animals. In 1953-54, 2,267 special muskrat permits at \$3 each and 303 beaver permits were issued.

Timber wolves, cougars and coyotes are considered predators but bounties were paid on cougars only; bounties on wolves and coyotes were discontinued and paid hunters used instead. Grizzly, black and brown bears are also classed as predatory and are unprotected throughout the Province.

Late in 1952 a rabies epidemic broke out in the northern part of the Province and trappers were employed to reduce the number of animals that might spread the disease. A double trapline was also set on the edge of the forested area completely surrounding the settled portions of the Province.

The wildlife resources of Alberta are administered by the Department of Lands and Forests under the Game Act and the Game Regulations.

British Columbia.—In 1926, effective control of fur bearing animals in British Columbia commenced and a registered trapline system went into effect. Under this system registered trappers are granted exclusive rights over designated areas. Each is given a sketch map and legal description of the territory and is required to submit an annual 'return of catch' outlining the amount and kind of fur obtained. These returns provide an accurate check of the fur taken from each district. The system of registered traplines has worked remarkably well and is practically trouble free.

Registered traplines cover all lands except private property, National Parks, Indian reserves, municipalities and certain other reserved areas. Trapping on private property may be pursued by the property owner himself or by someone to whom the owner has given permission, provided the trapper obtains a Special Firearms Licence which costs \$10 and which must be held by all trappers; this licence entitles the legal holder to hunt all types of large and small game. In 1954, 2,763 such licences were granted. In addition about 1,500 Indians were engaged in trapping: because they are not required to be licensed at present, their take is not recorded and the fur records for the Province are incomplete to that extent.

Fur bearers in the Province include bear, badger, beaver, fisher, fox, lynx, marten, mink, muskrat, otter, raccoon, skunk, squirrel, weasel and wolverine. Wolf, coyote, cougar and wildcat are classed as predators although the pelts of these animals are sometimes marketable. There is no close season on the predators or on raccoon, skunk, wolverine and black and brown bear. Raccoons and foxes have become so numerous in certain parts of the Province that they also may be considered as predators.

Trapping seasons are confined to the winter months, usually commencing Nov. 1, but beaver may be taken in some areas as late as May 24. Beaver are covered by tagging regulations under which the trapper is required to submit a yearly estimate of the number

of beaver left on his trapline. Before setting out to trap he makes known to the game warden of his area the number of animals he wishes to take; if it is not excessive he receives a tag which must be attached to each pelt. Trappers are not allowed to take more than 25 p.c. of the total population of beaver in their areas and this has played an important part in saving the beaver from extinction. These animals are now so numerous in some areas that it has become necessary to move them to districts where their activity will not cause damage. Nuisance animals are usually liberated on Indian traplines that need restocking.

Muskrat and squirrel are consistently the most important source of revenue among British Columbia furs. Marten was once in greatest demand, but mink appears to be taking precedence.

It is unlawful to ship fur out of or into the Province without permission and also to ship fur within the Province without plainly labelling the parcel with the sender's name, address and the number of his Special Firearms Licence. These regulations enable the game authorities to keep close control over fur shipments. Almost all of the raw fur business is centred in Vancouver and a game warden is posted there to supervise fur sales and fur traders. His regular visits to the traders keep infractions of the regulations at a minimum.

Low prices caused by changes in fashion and other factors such as the relatively high wages in construction and other industries, have made trapping fur for a livelihood unattractive in recent years. Little trapping is carried on today as compared with earlier years and in consequence fur bearers have become quite prevalent in all parts of the Province. The number of pelts upon which royalty was paid during 1954 was 459,411, of which 76 p.c. were squirrel, 12 p.c. muskrat, 4 p.c. mink, 3 p.c. weasel and 2 p.c. beaver. The remainder included fisher, silver, red and cross fox, lynx, marten, otter and wolverine.

Yukon Territory.—Registered trapline legislation introduced in 1950 has been completed throughout Yukon Territory and 420 individual trapline registrations have been approved for the area extending from the southern border to the 65th parallel of latitude. North of the 65th parallel the trappers, who are nomadic bands of Indians, have registered on two group-trapping areas: one, for the Loucheaux Band No. 10 of Old Crow, has 33 registrations approved for heads of families and the other, for the Loucheaux Band No. 7 of Fort McPherson, N.W.T., has 28 registrations. The initial registration fee for a trapline, either group or individual, is \$10 and the annual renewal fee is \$5.

During the past few years trapline activities have been discouraged by low fur prices and trappers have been forced to find other occupations. As a consequence the over-all picture of the fur population is good. Beaver, fox, lynx and squirrel are more prevalent and marten, mink and muskrat are more than holding their own in number; on the other hand, fisher, wolverine, otter and weasel are scarce. The predators—wolves and coyotes—appear to be increasing. Pelts taken in the 1954-55 season included: squirrel 154,516, muskrat 51,075, beaver 3,641, marten 1,113, weasel 449, mink 721, lynx 1,378, cross fox 15, red fox 31, silver fox 7, white marked fox 274, otter 87, fisher 26 and bear 24.

The only fur bearing animal on a quota is beaver: trappers are permitted to shoot or trap one beaver, including bank beaver, from each beaver house. Trapping may be prohibited over an area covered by a trapline permit if this is considered necessary for the conservation of breeding stock. During the month of March 1955 the lethal control program conducted since 1953 against predators, particularly wolves, was extended in scope by the establishment of lethal stations as far north as the 66th parallel of latitude. Poisoned bait was distributed by aircraft over a large number of lakes where wolf concentrations were observed.

Game law enforcement is in the hands of the Royal Canadian Mounted Police; in addition six Federal Park Wardens and 10 Class A Guides act as game guardians.

Northwest Territories.—Utilization of fur and game resources in the Northwest Territories is governed by the Northwest Territories Game Ordinance. Trapping privileges are available only to resident Indians and Eskimos and those white persons who were

licensed to hunt and trap in the Territories prior to 1938 and who have continued to reside therein. Provision is also made for the issue of general hunting licences to the descendants of these white persons.

Because of the nomadic nature of the Eskimo and the large areas over which he must hunt and trap there is no provision for trapline registration in the Franklin and Keewatin Districts, though a number of game preserves have been established in the Territories to preserve the fur and game therein for the natives. Largest of these is the Arctic Islands Game Preserve which comprises all the Arctic Islands north of the mainland plus a large area on the mainland.

Provision under the Game Ordinance for the establishment of registered traplines became effective in the Mackenzie District on July 1, 1949. Under this legislation exclusive trapping rights in limited areas are granted to the trappers to encourage them to manage carefully the fur bearers found there and to effect improvements leading to increased fur production. The Mackenzie District is divided into 11 Warden Districts (including Wood Buffalo Park) covering 386,615 sq. miles—over 50 p.c. under registration. There are 317 individual registered areas and 118 group registered areas.

The downward trend of the fur market during recent years has caused trappers to lose interest in trapline activities: many have obtained employment elsewhere and others have refused to trap very far away from the settlements. The fur take reflects this lack of interest, though lynx, marten and otter have remained steady and sharp increases have been noted for muskrat and beaver. The take of fox, weasel, mink and squirrel has shown a decided decrease. Pelts taken in the 1953-54 season were: muskrat 321,760, squirrel 38,116, white fox 27,178, weasel 9,218, beaver 9,760, mink 4,477, marten 4,863, lynx 1,244, black, blue, cross, red and silver fox 1,090, wolf 475, otter 133, wolverine 100 and fisher 18.

Beaver and marten are taken on a quota basis: trappers are permitted to shoot or trap one beaver for each occupied beaver lodge. In areas where beaver are scarce and where conditions are suitable, transplant operations are carried out. Close seasons are established when it becomes apparent that a particular species of fur bearing animal is being overtrapped and a wolf poisoning program is carried out in areas where these animals have become detrimental to desirable wildlife.

Game law enforcement is in the hands of wardens stationed at the principal settlements in the Mackenzie District; elsewhere in the Territories it is handled by the Royal Canadian Mounted Police.

Section 3.—Fur Farming

Fur bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. Foxes were the first fur bearers to be raised in captivity on a commercial scale but mink, chinchilla, raccoon, marten, fisher, fitch, nutria and others are now being reared. Mink are the most numerous, followed by the various types of foxes and these two species far outnumber all other kinds of fur bearing animals.

There was a slow and steady increase in the number of fur farms until 1920 when 587 were reported, followed by a period of more rapid growth from 1920 to 1938 when the number reached 10,454. In 1939, with the loss of the London and other European markets, prices declined and many fur farms went out of production. Though prices rose considerably after World War II, operating costs increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1953 only 2,513 reported but volume of production has been maintained.

Though the earliest and most intensive fur farming operations were concerned with fox raising in the Maritime Provinces and Quebec the sharp decline in the popularity of fox furs and the steady rise in mink resulted in Ontario and western Canada taking predominant positions in the raising of fur animals. A distribution of the 321,057 animals on fur farms at Dec. 31, 1953 showed 15 p.c. in British Columbia, 47 p.c. in the Prairie Provinces, 26 p.c. in Ontario, 8 p.c. in Quebec and 5 p.c. in the Maritime Provinces.

Furs have for centuries been used for clothing and adornment and the demands of fashion, encouraging the development of new colour phases in fox and mink, have been an important incentive to the fur farming industry. There have always been mink mutations in the wild state but these unusual animals stood little chance of survival and such pelts were exceedingly rare. Starting with wild-caught mink, breeders have, by cross-breeding, produced mink furs in a variety of colours. Among the earliest mutations to appear was an attractive bluish gray mink which became known as Platinum mink. Then mutations were crossbred and a still greater profusion of colour combinations appeared, notably the Sapphire mink, a cross of the steel blue Aleutian with the blue gray Platinum. Other unusual colour patterns are the Royal Pastel, a beautiful brown mink with a bluish cast, and an exquisite snow white mink.

In 1937 some chinchillas were imported into Saskatchewan and later into other provinces. These valuable little animals have a rich, soft fur. Although the original cost of chinchillas is high the outlay for raising them is small. There has been a steady increase in the number of farms on which chinchillas are raised; in 1953 there were 423 and the number of these animals reported was 15,889 with a value of \$2,580,961.

Section 4.—Statistics of Fur Production*

Total Fur Production Statistics.—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced and continued for some years an annual survey of raw fur production, basing the statistics on information supplied by the licensed fur trappers. More recently annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur trappers in that Province.

1.—Pelts of Fur Bearing Animals Produced and Percentage Sold from Fur Farms, Years Ended June 30, 1935-54

Year	Pelts		Percentage of Value Sold from Fur Farms ¹	Year	Pelts		Percentage of Value Sold from Fur Farms ¹

¹ Approximate.

² Newfoundland included from 1952.

Ontario leads the provinces in value of fur production, accounting for 24 p.c. of the total in the 1953-54 season. The number of pelts taken in Alberta was greater than in Ontario but squirrel pelts, which are lower priced furs, made up 51 p.c. of the total. In Ontario the more valuable mink and beaver pelts brought the total value to a higher level.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

The average prices for the different kinds of pelts taken in 1953-54 were generally lower than in 1952-53. Standard mink pelts dropped from \$15.18 to \$14.74, mutation mink from \$20.55 to \$19.29, beaver from \$13.90 to \$10.57 and muskrat from \$1.26 to \$0.94. Some types of fox pelts advanced in price; silver fox advanced from \$7.43 to \$7.77, new types from \$8.07 to \$8.30 and white fox from \$8.86 to \$11.10. Squirrel prices advanced from 45 cts. to 55 cts. and slight increases were recorded for rabbit, wildcat and wolverine.

Fur Farm Statistics.—The postwar downward trend in number of fur farms continued through 1954 with 2,408 farms compared with 2,513 in 1953. The value of fur bearers on these farms however was \$12,941,000 compared with \$10,835,709 in the earlier year.

Fur farms reporting foxes in 1954 numbered 249, a decrease from the 278 of the previous year; the 4,878 foxes on farms in 1954 were 9 p.c. fewer than in 1953 and were valued at \$113,455. Mink farms also dropped from 1,894 in 1953 to 1,858 in 1954. Farms having one to 79 mink decreased by 9 p.c. while those with 80 and over increased by 3 p.c. There was an increase in mink from 299,433 valued at \$8,142,229 in 1953 to 335,150 at \$9,632,795 in 1954. Fox pelt production decreased from 10,784 valued at \$82,252 in 1953 to 6,836 valued at \$70,554 in 1954 and mink pelts produced numbered 622,358 valued at \$10,097,794 in 1953 compared with 677,014 valued at \$12,868,787 in 1954.

Section 5.—Marketing of Furs

Montreal, Que., is the leading Canadian fur mart although auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that Province.

Grading.—The grading of furs to secure uniformity was introduced in 1939 by the Federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high quality pelts.

Exports and Imports.—Before World War II Canada marketed fur pelts mainly in the United Kingdom but that market was practically dormant during the war years and the fur trade was carried on mainly with the United States. A revival of trade with the United Kingdom took place after the War but 80 p.c. of Canadian fur exports still go to the United States.

The Canadian fur trade, both export and import, is chiefly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Exports consist largely of furs which Canada produces in greatest abundance, mink being the most valuable followed by beaver, muskrat and fox. Furs such as Persian lamb, certain types of muskrat, mink, sheep and lamb and squirrel make up the major portion of the imports.

Exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1953 and 1954 in Table 7.

Section 6.—The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

Fur dressing and dyeing industry statistics were first recorded in 1917 when 12 establishments with 511 employees reported receipts of \$1,071,805. Eight establishments in 1924 reported revenues of \$1,120,895, expenditures of \$162,013 on dyes, chemicals and

* Prepared in the Animal Products Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

other materials used, and expenditures of \$561,233 on salaries and wages to 539 employees. Of the 3,473,909 skins treated in that year muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c.

The greatest number of skins treated was reported in 1941 when 14,592,079 were handled, but almost 53 p.c. of those were rabbit skins so that the revenue for that year was only \$2,476,289. The record revenue reported was that for 1949 when \$6,691,418 was received and rabbit skins constituted 38 p.c. of the total processed.

In 1954 the number of skins treated was 9,279,897, of which muskrat comprised 48 p.c., squirrel 16 p.c., Persian and other types of lamb 13 p.c., rabbit 8 p.c. and mink 8 p.c.

¹ Value of factory shipments. See text pp. 624-625.

Changes in living habits and standards in the past quarter century are reflected in the type of goods produced by the fur goods industry. For example in 1921 there were 31,604 ladies' fur coats and jackets produced whereas in 1954 the number was 208,195. The manufacture of men's fur coats showed a decided reversal in the market; there were 5,692 men's fur or fur lined coats manufactured in 1921 but only 71 in 1954.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I briefly considers postwar growth of manufacturing within the historical framework of Canadian development with major emphasis on the year 1953 and the fifteen leading industries. Part II provides general statistical analyses including: manufacturing statistics from 1917; detailed treatment of current production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures, employment, salaries and wages and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

PART I.—REVIEW OF CANADIAN MANUFACTURING

Canada is today an industrialized society, obtaining its major source of income and finding its major source of employment in manufacturing operations. This process, beginning in the 1860's, gathered momentum in World War I but was not an economic force until the early years of World War II. Nevertheless some Canadian industries became competitive with those of other countries in both quality and price long before World War II. One of the earliest examples was the farm implements industry; another was the pulp and paper industry, which was able to compete successfully in important foreign markets in the 1920's and still remains the leading manufacturing industry.

The first phase of development took place between 1867 and 1900. Rising prosperity until 1873 brought about continuing expansion of manufacturing capacity particularly in such fields as flour and grist-mill products, leather boots and shoes, and log products such as lumber, lath and shingles. Manufacturing weathered the depressed economic conditions of the latter part of the 1870's and a good part of the 1880's, aided particularly by the high quality of Canadian natural resources and the fact that they could be developed at low cost, partly because of their growing accessibility as the railway network expanded in Canada and partly because cheap ocean transport became available.

The period 1900 to 1920 was characterized by rapid population increase and the opening up of the West. The program of railway construction, the growth of cities and towns, the equipping of western farms and the extension of community facilities in both eastern and western Canada gave great impetus to the production of capital goods. World War I brought about a notable acceleration of industrial diversification with particularly striking effects on the refining of non-ferrous metals, the expansion of the steel industry and the shipbuilding and aircraft industries. Following the War international competition became very keen and Canadian industries experienced some adjustment, particularly in the short though severe recession of 1921. This check was temporary and expansion was resumed up to the crest of 1929 with particular emphasis on pulp and paper, transportation equipment, non-metallic mineral products and chemicals. As a result of the depression of the 1930's when economic activity was at a low ebb, Canadian industries were unprepared for the avalanche of military orders following 1939; nevertheless conversion to war production was accomplished in two years. Expansion of productive capacity in manufacturing during the war years was particularly striking in such fields as tool making, electrical apparatus, chemicals and aluminum.

About two-thirds of the industrial structure created during that period was found to be adaptable to peacetime uses after the War. Although reconversion, modernization and expansion necessitated large capital outlays and although supply shortages slowed down the implementation of the program, most of the work was completed by the end of 1947. From 1950 onward, two developments contributed particularly to manufacturing expansion in Canada. First, the intensive search for new minerals and other natural resources brought about a number of important discoveries and rapid development followed in such fields as crude oil, natural gas, iron ore, non-ferrous metals and a number of less important metals. This new development and the resulting need for equipment for exploration and processing gave great impetus to Canadian industries producing capital goods. Further, the availability of a greater quantity and variety of indigenous raw materials led to the creation of more processing capacity and to the establishment of advanced raw-material and power-using industries. Foremost among these was the chemical industry, which became increasingly diversified. In particular, major discoveries of oil and gas made feasible the establishment of such industries in central Alberta notwithstanding the great distance to the principal markets of the North American Continent.

The second development was the outbreak of the war in Korea, leading to the establishment of a three-year \$5,000,000,000 defence program. Three industries in particular received great stimulus from the rearmament program: the aircraft industry which, for the first time, began production of jet aircraft and jet aircraft engines; the electronics industry which produced a great variety of new items, from equipment for Canada's northern radar screen to infantry pack radio sets; and the shipbuilding industry which not only revived after several years of decline following the end of World War II but which drew increasingly on Canadian equipment producing industries to fit out, power and arm the newly built naval vessels. A major characteristic of the expansion of Canadian manufacturing industries encouraged by the rearmament program was the adaptability of many of the new developments to civilian use. An outstanding example was the comparative ease with which a television industry was established in Canada.

Developments in 1953.—Manufacturing industry continued to expand in 1953 under the influence of a growing population and a broadening economic base. The gross value of shipments by manufacturers reached \$17,785,416,854, a 4.7 p.c. increase over 1952.

The 1953 advance in value was accounted for by an increase of 6.8 p.c. in the physical volume of production, offset by price declines. The index of physical volume of production at 263.0 (1935-39=100), was 20 points above the peak wartime level attained in 1944. Accompanying the rise in output was an increase of 3.0 p.c. in the number of persons employed and of 8.7 p.c. in the amount of salaries and wages paid. Salary and wage payments at \$3,957,018,348 were the highest on record and exceeded the previous high reported in 1952 by \$319,398,188.

Manufacturing establishments reporting in 1953 numbered 38,107. Of these, 939 were located in Newfoundland, 216 in Prince Edward Island, 1,591 in Nova Scotia, 1,094 in New Brunswick, 12,132 in Quebec, 13,114 in Ontario, 1,540 in Manitoba, 1,062 in Saskatchewan, 2,072 in Alberta, 4,317 in British Columbia and 30 in the Yukon and Northwest Territories. These plants furnished employment to 1,327,451 persons who received \$3,957,018,348 in salaries and wages, produced goods with a selling value at the factory of \$17,785,416,854 and spent \$9,380,558,682 for materials, while the value added by manufacture totalled \$7,993,069,351. It should be remembered that the value added by manufacture does not represent the manufacturers' profits. The value added is obtained by subtracting the cost of materials, including fuel and electricity, from the value of products. The difference represents the value added to the materials by labour. It is this difference which the employer of labour uses to pay for the labour itself, the overhead expenses, interest and profits. Compared with the previous year there was an increase of \$802,729,819 in the value of factory shipments.

Development in Canada's Leading Industries.—In Canada fifteen leading industries account for about 45 p.c. of the value of manufacturing production. The largest industry, pulp and paper, had a gross value of output of \$1,180,000,000 in 1953. In little over half a century the Canadian industry has become one of the major enterprises of the world. Several factors were responsible for this growth: Canada possesses over half of the pulpwood resources of North America, cheap and abundant water power is found close to pulpwood stands, and extensive river systems can be used to transport pulpwood to the mills. Other important factors include the steady growth of population on the North American Continent, the increase in literacy, the rise of voluminous metropolitan dailies, the adoption of technical improvements in the printing and building trades and the growth of modern merchandising techniques. In recent years extensive development in the field of non-paper uses for dissolving pulp, such as rayon and plastics, has contributed to the growth of the industry.

In the period 1946-53 the pulp and paper industry in Canada more than doubled its value of production. The volume of newsprint output advanced 38 p.c., mechanical pulp 28 p.c., chemical pulp 51 p.c., paperboard 39 p.c., and wrapping paper 36 p.c. The significance of the industry in the postwar period is indicated by the fact that it ranked first in wages paid, first in new investment, first in exports as well as first in value of output. This industry produced 21 p.c. of the world's output of woodpulp and supplied 30 p.c. of the world's total pulp exports, provided more than one-half of the world's newsprint and a significant amount of other grades of paper and paperboard.

In 1953 the output of newsprint continued to expand, registering an 0.8 p.c. increase over 1952. Sales of other paper products and of pulp also increased. The increase in newsprint production was accounted for by larger exports, which totalled \$619,000,000 in value.

Four of Canada's fifteen largest manufacturing industries are included in the food and beverages group. The slaughtering and meat packing industry ranked fourth in 1953 with a gross value of sales of \$829,000,000, butter and cheese ninth with gross sales of \$397,000,000, miscellaneous food preparations thirteenth with \$284,000,000 and bread and other bakery products fourteenth with \$278,000,000. The level of activity in Canada's food processing establishments exerts a major influence on over-all employment and income. The food industries have experienced a wide shift in the importance of various markets. Production for overseas trade received considerable impetus during World War I

and continued active in the following period. By 1939 Canadian salmon, bacon, flour and canned fruits and vegetables were being shipped to Europe in large quantities and the United States also provided an attractive market for a great variety of processed foods. During World War II producers turned out bacon, canned meats, cheese and dried milk and eggs in record quantities to meet Allied requirements but in the postwar period Canada's growing population and increased per capita consumption have reduced the amount left for export.

The non-ferrous metal smelting and refining industry, the second largest manufacturing industry in Canada, had a gross value of production of \$871,000,000 in 1953. Canada is one of the world's leading producers of non-ferrous metals, standing first in the production of nickel, second in aluminum, third in zinc, fourth in lead, and fifth in copper. These figures do not include the metallic content of exported ore. Canada has been the world's leading exporter of non-ferrous metals for over a decade. The most important of this country's base-metal ore bodies were discovered before the turn of the century but their complexity prevented early exploitation. Unlike many important deposits elsewhere, which consist largely of oxides or of sulphides of a single metal, they were found to contain ores of two or more base metals intimately associated and frequently containing appreciable quantities of precious metals, such as gold, silver and platinum. Their development has been one of the most notable triumphs of Canadian skill and enterprise. During World War I and throughout the 1920's, large sums of money were spent on the discovery and improvement of smelting and refining techniques. Later, as the success of these processes was assured, plants were built that ranked among the greatest and most highly integrated of their kind in the world. Once in operation these establishments were in a position to reap the economies of large scale production. Cheap water power, numerous byproducts and locations near the ore bodies were other advantages which enabled Canadian firms to sell large tonnages of refined metal in the world's markets at competitive prices. Unfortunately they were soon to be faced with the general decline in industrial demand for metals which characterized the early 1930's. High United States tariffs also restricted sales in that country. It was not until about 1935 that industrial recovery and the first stages of rearmament in Europe led to production again approaching capacity. During World War II many ore bodies were "high graded", removing the best ore and losing the lower grade deposits. After the War production declined owing not only to a fall in demand but also because of a return to better conservational practices. Improved technology has permitted the treatment of rock which formerly would have been classified as waste. However in the past few years a renewed defence demand and a greatly expanded civilian economy have been reflected in the output of base metals which reached a postwar peak in 1953. Although production of copper was down 2 p.c., output of all other major base metals was up from the previous year. Nickel production increased by 2 p.c., lead production by 15 p.c., zinc by 8 p.c., aluminum by 10 p.c., and iron ore by 23 p.c.

The transportation equipment group includes four of Canada's largest industries: motor vehicles ranked third with sales of \$836,000,000, aircraft and parts eighth with \$399,000,000, railway rolling stock tenth with \$338,000,000 and motor vehicle parts eleventh with \$308,000,000. The establishment and rapid growth of the motor vehicle industry in Canada was particularly influenced by early tariff policies and by the strong demand for North American type vehicles in many Commonwealth countries and the existence of trade preferences granted by some of these territories to Canada. Another characteristic of the industry has been American ability to supply relatively low-cost components and sub-assemblies, patent rights, technical and managerial skill, research facilities and large amounts of investment capital. During the postwar period the Canadian motor vehicle industry has more than trebled its sales. In 1939 there was one passenger car for every 9.5 persons in the country; in 1953 there was one for every 5.9 persons. The 1953 ratio for all types of motor vehicle was one for every 4.3 persons.

The aircraft and parts industry had its growth accelerated by the defence production program which began with the outbreak of war in Korea in 1950. Features of the expansion were the development of an all-Canadian long-range fighter for defence in the North

and the production of several United States types of defence aircraft. On the civilian side several types of passenger aircraft were developed to meet Canadian flying conditions, especially in the vast areas of the North. These have met with a good response from purchasers abroad as well as at home. This development in aircraft production has been accompanied by the establishment of facilities for producing items new to Canadian manufacturing such as aircraft instruments, needle bearings, and special alloys to withstand the heat of jet engines.

Canada's railway rolling stock industry experienced peaks of activity during and immediately after the two world wars. It enjoyed several years of moderate prosperity in the 1920's but became one of the nation's most depressed industries a few years later. Generally speaking the level of activity in this industry has been closely linked with the financial position of the Canadian railways. The facilities of locomotive and car building companies, dependent almost entirely upon the railways' program of new investment in rolling stock, have been used in an intermittent fashion and prolonged plant shut-downs have not been uncommon. On the other hand outlay on repair and maintenance has usually been necessary on a continuing basis and railway shops and parts suppliers have been less exposed to extreme fluctuations in production and employment. From 1951 to 1953 the industry's sales increased.

The fifth largest manufacturing industry, petroleum products, had a gross value of output of \$695,000,000 in 1953 and is of considerable significance in terms of Canada's balance of payments and strategic importance to the defence of North America. Measured in either bulk or value terms, world production of crude oil is the most important commodity entering international trade. Canada's growing industrialization is reflected in the rising rate at which crude oil is used. There have been three definite phases in the use of oil. The first, which began soon after 1860, was based on kerosene but light petroleum fractions were soon accepted as a cheap and efficient substitute. Other fractions, which make up the rich and complex mixture of hydrocarbons in crude petroleum—ranging from explosively volatile wet gases to heavy oils, waxes and asphalts—were beyond the technology of the day to unravel and the capacity of the economy to absorb. World War I and the maturity of the internal combustion engine marked the second phase. The price of gasoline rose sharply and drilling activity increased all over the world. By 1930 surplus oil production had become general once more and from then until World War II there was from 20 to 25 p.c. surplus capacity in all branches of the industry. With kerosene consumption declining and the use of gasoline becoming general the production of middle distillates and the heavier ends outran the market and they were frequently sold at distress prices. Phase three, which developed out of the second world war, is now asserting itself. For the first time most refineries have few surplus products. Nearly everything from a barrel of crude is being marketed, it now being possible to gear production closely to fluctuations in demand. Behind all this lies modern refinery equipment and techniques which are being used to 'crack' heavy fractions down to lighter ones and, more important still, the domestic oil heater and the diesel engine. Middle distillate consumption has been increasing much more rapidly than that of gasoline in recent years and now serves to underwrite much of the growing demand for crude oil. Although the history of the Canadian crude oil industry dates back almost 100 years, production did not begin to reflect the amount of exploratory drilling done in the Western Provinces until 1936 when Turner Valley was definitely established as a major oil field. Scattered discoveries of little commercial importance had been made before that time and natural gas had been found in abundance. With the exception of the discovery of the heavy crude area at Lloydminster in 1944 no other outstanding developments took place until early 1947 when the Leduc field was discovered. Output had been falling off but in the few years since the Leduc field came into production the Canadian oil outlook has been transformed. In 1946 domestic sources supplied about 10 p.c. of the nation's needs; in 1953 the proportion was 46 p.c.

In 1953 the sawmills produced about \$581,000,000 worth of planks and boards, shingles, railway ties and other sawmill products and thus ranked sixth among Canada's manufacturing industries. Since the early days of Canada the growth of the lumber industry

has reflected the expansion of the Canadian economy. During World War II output was limited only by production facilities and the availability of manpower. Large quantities of lumber were used domestically for the construction of defence establishments and for new munitions factories in the first two years of the War. Later on, demand gradually increased for lumber to make boxes, barrels and crates required for the overseas shipment of munitions, food and supplies. Large volumes of lumber were also used in connection with shipbuilding and aircraft construction and for such essential purposes as mining, manufacture of railway rolling stock and housing. Besides fulfilling domestic requirements, which took an increasing percentage of total production as the War proceeded, Canada maintained at high level its exports to the United Kingdom, to other Commonwealth countries and to the United States. For most of the period since the end of World War II demand for sawmill products has continued to grow. By volume, 46 p.c. of the lumber produced in 1953 was exported.

With production at \$459,000,000 in 1953 the primary iron and steel industry ranked seventh in Canadian manufacturing. After World War II the industry added greatly to its steel making plant and by end of 1953 domestic output reached 4,116,000 tons annually. The trend has been to add rolling mill and other fabricating facilities in order to permit integration and more efficient operation of existing plants. Important technical developments have also been pioneered in Canada, including the continuous casting of steel shapes, and a faster process for the use of oxygen in steel making. Considerable new blast furnace capacity has also been put into operation.

The rubber industry ranked twelfth in 1953 with a gross output of \$291,000,000. This industry forms an adjunct of considerable importance to the cotton yarn and cloth and synthetic textiles industries which supply it with fabrics, yarns, etc., used in manufacturing such items as tires, hose and belting. More tires were sold in 1953 than in 1952 but the total value was about the same. Sales of waterproof and canvas shoes decreased in value by 8 p.c. but increases in the sales of other products raised the industry's sales over 1 p.c. above the 1952 level. Consumption of rubber in 1953 involved 40.8 p.c. synthetic rubber, 42.6 p.c. natural rubber and 16.6 p.c. reclaim.

The men's factory clothing industry ranked fifteenth with output at \$274,000,000 in 1953. The value of shipments was 1.3 p.c. lower than in 1952. This decline followed ten years of successive annual advances and the level of operations was the second highest on record. Suits and overcoats accounted for 4.6 p.c. of the industry's shipments.

PART II.—ANALYSES OF MANUFACTURING STATISTICS

Section 1.—Growth of Manufacturing

This Section gives a summary of the growth of manufacturing in general as shown by comparable principal statistics, i.e., establishments, employees, salaries and wages paid, cost of materials and value of products. Also it includes information on the consumption of manufactured products as well as a treatment of value and volume data.

Subsection 1.—Historical Statistics of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

Beginning in 1952 the Bureau of Statistics changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report

value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an item usually readily available from the firms' records. The changeover was made to provide increased ease in reporting for the majority of plants and at the same time to produce more reliable and useful statistics.

1.—Summary Statistics of Manufactures 1917-53

NOTE.—Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years will be found in the 1943-44 Year Book, p. 363. Statistics of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Estab- lish- ments	Employees	Earnings	Cost at Plant of Materials Used	Net Value of Products ¹	Gross Value of Products ⁴
	No.	No.	\$	\$	\$	\$
1917	21,845	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791
1918	21,777	602,179	567,991,171	1,827,631,548	1,399,794,849	3,227,426,397
1919	22,083	594,066	601,715,668	1,779,056,765	1,442,400,638	3,221,457,403
1920	22,532	598,893	717,493,876	2,085,271,649	1,621,273,348	3,706,544,997
1921	20,848	438,555	497,399,761	1,365,292,885	1,123,694,263	2,488,987,148

¹ For 1924 and subsequent years the net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.

² A change in the method of computing the number of wage earners in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. In 1931 however the method in force prior to 1925 was re-adopted.

³ Newfoundland included from 1949. ⁴ In 1952 gross value of products was replaced by value of factory shipments; see text immediately preceding this table.

¹ See footnote 1, Table 1.
see text on pp. 624-625.

² In 1952 gross value of products was replaced by value of factory shipments;
³ See footnote 2, Table 1.

⁴ Includes Yukon Territory.

In order to retain some continuity with the past, Table 3 continues the historical series on the chief component material classification basis. Similar statistics under the Standard Classification groups (*see* pp. 635-636), worked back to 1945, are given in Table 10, pp. 637-638.

¹ See footnote 1, Table 1.
see text on pp. 624-625.

² In 1952 gross value of products was replaced by value of factory shipments;
³ See footnote 2, Table 1.

The figures in Table 4 trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1953. In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period. The figure that shows most clearly the trend of development is the use of power. Horsepower employed increased from 1,658,475 in 1917 to 8,159,414 h.p. in 1948, an advance of about 392 p.c. in 31 years. Other interesting comparisons are the trend of value added by manufacture per employee and of average earnings since 1929.

¹ A change in the method of computing the number of production workers in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee as compared with what these averages would have been under the other method. In 1931 however the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years. ² Net value of products; see footnote 1, Table 1, p. 625. ³ In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625. ⁴ Not collected since 1949.

Consumption of Manufactured Products.—In Table 5 the value of all manufactured commodities made available in 1953 was \$18,523,565,572, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports. More accurate

statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, non-ferrous metals and textiles were, in that order, the leading groups in the value of finished products made available for consumption in 1953.

Animal, wood and paper, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

On balance, Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production. The expansion of the iron and steel, chemical and non-metallic mineral products industries will enable Canada to meet more of her requirements for home consumption and to export greater quantities in the future.

¹ Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; for 1939-53 they are for the calendar year. Net imports are total imports less foreign products re-exported.

² In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625. ³ Consumption figures for the major standard industrial classification groups (see p. 625) cannot be calculated as statistics of imports and exports are compiled on the component material classification basis.

Subsection 2.—Value and Volume of Manufactured Production

Value of Manufactured Production.—In the interpretation of manufacturing values over a number of years variations in the level of prices must be borne in mind. In recent years owing to large changes in prices, unadjusted value series used in isolation have become increasingly inadequate as indicators of economic trends. Consequently interest has shifted to measures of volume. The range of prices since 1917, on the base period 1935-39 = 100, is as follows:—

Year	General Wholesale Price Index	Price Index of Fully or Chiefly Manufactured Products
1917	148.9	150.9
1920	203.2	208.2
1929	124.6	123.7
1933	87.4	93.3
1939	99.2	101.9
1944	130.6	129.1
1946	138.9	138.0
1949	198.3	199.2
1952	226.0	230.7
1953	220.7	228.8

These factors should be borne in mind when interpreting the trends in the net value of production for the years 1929 to 1953, shown in the Chart below.

Volume of Manufactured Production.—Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents. The field of industrial production, because of its dominating position in the national economy, has attracted increasing attention and this in turn has resulted in the need for more accurate measurements of physical output.

During the past few years the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided, at the major group level, into durable manufactures and non-durable manufactures, for the reason that the movement of durable goods normally varies from that of non-durables. There tends to be greater fluctuation in durables from prosperity to depression, the demand for non-durables being more constant.

6.—Index of the Total Volume of Manufactured Production classified on the Basis of Durable and Non-durable Goods 1944-53

(1935-39=100)

NOTE.—Figures for the years 1935-43 are given in the 1955 Year Book, p. 641.

Year	Non-durable Manufactures	Durable Manufactures	All Manufactures	Year	Non-durable Manufactures	Durable Manufactures	All Manufactures
1944.....	179·8	340·1	242·3	1949.....	198·2	246·3	217·0
1945.....	176·3	262·1	209·8	1950.....	208·3	259·1	228·1
1946.....	180·2	205·1	189·9	1951.....	214·0	285·9	242·1
1947.....	191·2	233·5	207·7	1952.....	215·2	294·9	246·3
1948.....	197·1	244·4	215·5	1953.....	224·1	323·9	263·0

The period 1944-53 was characterized by unprecedented industrial expansion. The wartime peak was reached in 1944 when weapons, supplies and equipment were rolling off the assembly lines at record-breaking pace. The end of hostilities and the subsequent reconversion to peacetime production were attended with declines in output in 1945 and 1946 but the upward trend was resumed in 1947. The rate of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the outbreak of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. A remarkable feature is that in 1952 the index of the volume of manufacturing production stood at 246·3 having surpassed the record wartime level of 242·3 established in 1944. The index continued to advance in 1953, reaching a record high of 263·0.

The increased productive activity which will result from the present very high level of capital investment is not as yet fully reflected in current production statistics. Huge expansion and development programs are well under way in iron ore, aluminum and other metals, oil, chemicals, electric power and in a number of other industries. In addition, federal government expenditure for national defence should still exert some influence on the economic picture.

* For a description of the methods used in constructing the indexes and a description of its scope, see DBS Reference Paper No. 34, *Revised Index of Industrial Production, 1935-1951*.

Non-durable Manufactures.—The trend of output in the non-durable sector of manufacturing from 1944 to 1953 was visibly smoother than in the durable sector. Except for 1945 there has been no interruption in the upward movement of production during the period under review. Production continued to expand after the War although at a slower rate. Unlike durable goods, non-durable commodities are mostly consumer goods and are less influenced by sudden changes in the international situation or the capital investment programs of producers and governments. By 1953 the non-durables index of output had reached 224, the highest on record.

1953.....	167.3	244.7	204.8	324.3	284.4	

Durable Manufactures.—On the base of 1935-39 the new volume index of durable manufactures reached a peak of 340 in 1944. In the following two years it declined sharply and stood at 205 in 1946. Since then it has regained almost half the lost ground and reached 324 in 1953.

The largest gain occurred in the output of transportation equipment. Owing principally to the tremendous increases in production of ships and aircraft, the index for this group of industries rose to the record level of 694 in 1944. After reaching a postwar low of 222 in 1946 the index rose moderately during the next three years but, spurred by the great demand for passenger cars and by the renewal of defence production, marked gains were made since 1950, the index climbing to 436 in 1953.

Canada's industrialization program, together with strong postwar demand for consumer durable goods, led to steady expansion of the iron and steel group of industries so that by 1953 the index for the group stood at 291. Compared with prewar, pig iron output had more than tripled and steel ingot and casting production had risen by 170 and 74 p.c. respectively. The additional capacity constructed during the past few years should reduce still further the country's dependence on United States imports of finished and semi-finished iron and steel shapes. Indicative of the rapid growth of the industry in recent years is the amount of funds expended for new plant, machinery and equipment. From an average annual expenditure of \$62,000,000 during the previous five years, new investment jumped to \$136,000,000 in 1952 and \$114,000,000 in 1953.

8.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Durable Manufactures Classification 1944-53

(1935-39=100)

NOTE.—Indexes for the years 1935-43 are given in the 1954 Year Book, p. 630.

Section 2.—Production by Industrial Group and Individual Industries

The Standard Classification adopted in 1949 groups the manufacturing industries of Canada under the seventeen major headings listed in Table 9 instead of under the nine groups listed in Table 3 which were formerly used as the basis of classification. Summary statistics for the main groups on the Standard Classification basis are given for alternate years 1945 to 1953 in Table 10, while 1953 statistics are presented in detail in Tables 11 and 12. Table 13 classifies manufactures by origin of materials.

Subsection 1.—Manufactures Grouped on the Standard Classification Basis

Recent Changes in Manufacturing Production.—Tables 9 and 10 show the changes in the nature of manufacturing production since the end of World War II with regard to numbers employed, salaries and wages paid, and gross value of products.

Significant changes in the nature of manufacturing production took place after the cessation of hostilities in 1945. Industries engaged in war production operated at a substantially lower level, while industries producing consumer goods stepped up their production. From the point of view of employment the chemical and allied products group with a drop of 33 p.c. experienced the greatest decline in production between 1945 and 1949.

Between 1949 and 1953, for manufacturing as a whole, there was an increase of 42.4 p.c. in the gross value of shipments, 13.1 p.c. in employment and 52.5 p.c. in salaries and wages paid. In terms of employment, the transportation group with an increase of 49.0 p.c. experienced the greatest expansion since 1949. Electrical apparatus and supplies

came second with 37.4 p.c. followed by non-metallic mineral products with 22.1 p.c., miscellaneous industries 22.1 p.c., chemicals and allied products 21.5 p.c., products of petroleum and coal 17.6 p.c., non-ferrous metal products 16.5 p.c., iron and steel products 15.0 p.c. The smallest gain was reported by the clothing group with 2.0 p.c. Three groups reported declines in employment; tobacco and tobacco products led the list with 11.2 p.c., followed by textiles (except clothing) 5.9 p.c. and leather products 5.2 p.c.

9.—Percentage Variations in Employment, Earnings and Gross Value of Products in the Main Industrial Groups, 1949 Compared with 1945, and 1953 with 1949

Industrial Group	1949 Compared with 1945			1953 Compared with 1949

Detailed Statistics by Group and Individual Industries.—Table 11 presents for the year 1953 detailed statistics regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under seventeen main groups according to the Standard Industrial Classification.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example the value of production of the confectionery industry amounting to \$98,782,944 in 1953 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product is confectionery had a value of production of \$98,782,944. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as ice cream which was valued at \$2,912,810 and bread and other bakery products valued at \$2,688,068. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 12. Commodities produced in small quantities are not included but the list covers approximately 75 p.c. of total production.

11.—Principal Statistics of Individual Manufacturing Industries classified on the Standard Classification Basis 1953

Group and Industry	Estab- lish- ments	Em- ployees	Earnings	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments ¹

¹ In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625.

12.—Quantity and Value of the Principal Commodities Produced by the Manufacturing Industries 1953

NOTE.—All values in this table are for factory shipments excepting for those items marked with an asterisk which are gross value of products.

Group and Commodity	Unit of Measure	Quantity	Value
			\$
Food—			
Biscuits, all kinds.....	lb.	239,440,587	70,424,959
Bread.....	"	1,557,542,000	171,795,150
Butter, factory made.....	"	304,547,995	179,760,875
Cheese, factory made.....	"	141,226,111	45,129,324
Confectionery, all kinds.....	"	—	72,132,196
Cream, sold in dairy factories.....	lb. b. fat	24,795,757	27,960,246
Feed, chopped, grain.....	ton	492,411	27,402,878
Feeds, stock and poultry prepared.....	"	1,997,857	165,852,133
Fish, canned and otherwise prepared*	"	—	60,270,260
Flour, wheat.....	bbl.	23,314,790	204,945,417
Fruits and vegetables, canned.....	lb.	559,016,122	69,447,527
Fruits and vegetables, frozen*	"	46,556,914	9,389,010
Ice cream, factory made.....	gal.	28,939,100	48,069,967
Jams, jellies and marmalades*	"	—	18,858,823
Lard.....	lb.	101,995,134	14,439,593
Meats, canned, including poultry, pastes, etc.....	"	74,744,209	40,569,221
Meats, cooked.....	"	51,882,190	32,916,793
Meats, cured.....	"	216,930,519	114,357,970
Meats, sold fresh.....	"	1,239,252,242	443,691,210
Meats, sold frozen.....	"	105,954,218	38,860,978
Milk, evaporated and condensed.....	"	290,958,370	35,177,369
Milk, sold in dairy factories.....	gal.	167,315,993	118,945,190
Pickles, relishes and catsup.....	"	—	18,232,742
Pies, cakes and pastry.....	"	—	72,358,539
Powders, edible (custard, jelly, milk, etc.).....	"	—	31,224,359
Sausage, fresh and cured.....	lb.	84,829,516	32,870,598
Shortening.....	"	135,984,639	31,031,467
Sugar, granulated (cane and beet).....	"	1,187,800,474	96,812,324
Tea and coffee, roasted, blended and packed.....	"	124,080,780	113,180,468
Beverages—¹			
Aerated waters*	gal.	110,174,824	94,076,502
Beer, ale, stout and porter (sales).....	"	206,908,214	324,203,939
Spirits, potable, sold (net sales).....	pr. gal.	12,445,166	97,715,878
Wine, sold.....	Imp. gal.	4,355,934	10,952,615
Tobacco and Tobacco Products—¹			
Cigarettes.....	'000	21,156,092	289,424,673
Cigars.....	"	236,248	18,233,475
Tobacco, chewing, smoking and snuff*	lb.	28,941,116	71,130,819
Tobacco, raw leaf, processed*	"	120,793,167	66,757,162
Textile Products (except Clothing)—			
Bags, cotton and jute.....	No.	114,186,046	23,006,847
Blankets.....	"	—	13,044,901
Carpets, mats and rugs.....	"	—	13,719,048

Subsection 2.—Manufactures Classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may however be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods.

13.—Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group 1953

Origin of Material Used	Estab- lish- ments	Em- ployees	Earnings	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments ¹

¹ In 1952 gross value of products was replaced by value of factory shipments; see text pp. 624-625.

Subsection 3.—Manufactures Classified by Type of Ownership

The figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946 although the first survey did not include the fish-curing and packing industry. Its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. In that category industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operations increases, as the following figures for 1953 show:—

Group	Average Number of Employees per Establishment	Percentage of Individual Ownership Establishments to the Total
Wood products.....	10.8	62.2
Printing, publishing and allied industries.....	16.0	44.8
Food and beverages.....	21.7	47.4
Miscellaneous manufacturing industries.....	23.0	35.5
Non-metallic mineral products.....	31.4	34.4
Clothing.....	34.3	27.6
Chemicals and allied products.....	45.4	16.0
Leather products.....	47.6	27.5
Iron and steel products.....	69.8	24.8
Textiles.....	76.3	29.4
Knitting mills.....	83.0	15.0
Non-ferrous metal products.....	94.5	26.9
Paper products.....	152.1	8.8
Products of petroleum and coal.....	171.1	3.0
Tobacco and tobacco products.....	172.6	38.2
Electrical apparatus and supplies.....	182.1	9.9
Transportation equipment.....	251.3	29.5
Rubber products.....	313.9	8.3
ALL GROUPS.....	34.8	44.4

Of the 38,107 establishments operating in 1953, 1,413 establishments in the periodical publishing industry were unclassifiable, leaving 36,694 establishments in the four categories of ownership. Individual ownership numbered 16,281 establishments, partnerships 5,421, incorporated companies 14,028 and co-operatives 964. The percentage distribution of the four categories of ownership is given in Table 14 for 1946-53.

¹ Four main categories of ownership only; the non-classifiable group is not included.

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 15 and 16, these establishments which comprise 44 p.c. of the total had only 6 p.c. of the total employees. Partnerships accounted for 15 p.c. of the number of establishments and 3 p.c. of the total employees. Incorporated companies with 38 p.c. of the number of establishments had 90 p.c. of the employees. Co-operatives with 3 p.c. of the number had only 1 p.c. of the employees.

On the basis of employment provided, incorporated companies are by a very wide margin the most important factor in the employment field. In the rubber products, paper products, transportation equipment, electrical apparatus and supplies groups 99 p.c. of the employees were reported by such companies. Companies in the petroleum and coal products and chemicals and allied chemical products groups had 98 p.c., non-ferrous metal products had 97 p.c., tobacco and tobacco products, textiles and iron and steel products groups had 96 p.c., knitting mills 93 p.c.; non-metallic mineral products 91 p.c., leather products and miscellaneous manufacturing industries 88 p.c., printing, publishing and allied industries 86 p.c., and food and beverages and clothing groups 81 p.c. Companies in the wood products group, with 70 p.c., reported the lowest proportion of the total employment.

Subsection 4.—Leading Manufacturing Industries

The rank of the ten leading industries in 1953, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922 in the following statement:—

Industry	Rank in—							
	1922	1929	1933	1939	1944	1949	1952	1953
Pulp and paper.....	2	1	1	2	5	1	1	1
Non-ferrous metal smelting and refining....	1	9	2	1	2	3	3	2
Motor vehicles.....	6	4	11	5	7	4	4	3
Slaughtering and meat packing.....	3	2	3	3	1	2	2	4
Petroleum products.....	9	10	6	6	14	5	5	5
Sawmills.....	4	5	14	8	11	6	6	6
Primary iron and steel.....	20	16	31	11	13	8	7	7
Aircraft and parts.....	1	1	1	1	4	1	16	8
Butter and cheese.....	5	6	5	4	10	7	8	9
Railway rolling stock.....	24	7	23	16	16	9	9	10

¹ Did not rank among the forty leading industries in that year.

A prominent feature of Canadian manufacturing development during the past 25 years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base-metal resources of the country, has taken its place among the leading manufactures along with the industries based upon forest, agricultural and livestock resources.

During World War II the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. When the War ended

the industries engaged in the production of consumer goods, by reason of the expanded demand for their products, bettered their positions.

Some major changes took place in the ranking of the ten leading industries in 1953. The impetus given to Canadian manufacturing production by the Korean war is reflected in the advance of the aircraft industry to the eighth position. This industry was in fourth place in 1944 and sixteenth place in 1952. The shipbuilding industry also bettered its position as a result of the current defence program, placing thirty-fourth in 1952 and thirteenth in 1953. Pulp and paper has retained its premier position since 1946. Non-ferrous metal smelting and refining and motor vehicles bettered their position in 1953, but slaughtering and meat packing, butter and cheese, and railway rolling stock declined in relative importance. Petroleum products, sawmills and primary iron and steel were in the fifth, six and seventh position, unchanged as compared with 1952.

17.—Principal Statistics of the Forty Leading Manufacturing Industries ranked according to Value of Factory Shipments 1953

¹ In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625.

Section 3.—Principal Factors in Manufacturing Production

Subsection 1.—Earnings in Manufacturing Industries*

In 1953 the 38,107 establishments covered employed 274,225 supervisory and office employees and 1,053,226 production workers, a total of 1,327,451 persons. Out of every 1,000 persons employed in manufacturing, 207 were classed as office employees and 793 as production workers; the former earned 26 p.c. and the latter 74 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years has been the reduction in the disparity between average annual earnings of office and production workers. In 1939 average annual earnings of production workers were only 56 p.c. of that paid to office workers, in 1943 the percentage rose to 76, declined to 69 in 1947 and rose to 75 in 1953. This tendency towards equalization is attributed, in part, to the controls adopted by the Government during the war years which stabilized earnings of office workers more so than the earnings of production workers. The increase in average earnings of production workers was also influenced by the fact that large numbers were employed in the highly paid iron and steel industries and by the increase in the number of hours worked, some at overtime pay.

18.—Annual Earnings of Employees in Manufacturing Industries, Significant Years 1917-53

NOTE.—The averages of earnings for the years 1933-45 are strictly comparable with those for the years up to 1924 but not with those for the intervening years. The figures for the latest years—as for the earlier—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

Average earnings of office workers in 1953 amounted to \$3,707 which was \$1,961 or 112 p.c. higher than in 1939. Office employees in Ontario with \$3,892 were the highest paid. Those in Quebec were second with \$3,670, British Columbia third with \$3,609, and Manitoba fourth with \$3,419. The fact that head offices of many large corporations are located in Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salary in the provinces in which these cities are located.

* Statistics of earnings and hours of work of wage earners and salaried employees in manufacturing will be found in Chapter XVIII on Labour.

Average earnings of production workers in 1953 amounted to \$2,792 which was \$1,817 or 186 p.c. higher than in 1939. Production workers of British Columbia received the highest average earnings of \$3,108. Ontario with \$2,980 was in second place, followed by Saskatchewan with \$2,785, Alberta \$2,718, Manitoba \$2,619, Quebec \$2,558, Newfoundland \$2,549, etc. The high figure shown for Yukon and Northwest Territories in regard to the average earnings of production workers is owing to the unusual conditions under which industry is carried on in these regions and is not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 19.

Ontario has a larger proportion of females among its office employees than the other provinces. The same situation prevails in Quebec with regard to production workers, because of the importance of the textile industries in providing employment to females. Of all female production workers engaged in the manufacturing industries of Canada in 1953, 43 p.c. were found in the textile and clothing groups.

Average Annual Earnings in the Forty Leading Industries.—In 1953 there were five industries paying office workers an average of \$4,500 or over, as compared with three in 1952. Indicative of the rapidly changing pattern of remuneration in manufacturing is the fact that in 1945, the last year of the War, no industry paid office workers annual salaries

of over \$3,000. Highest average earnings in that year were \$2,935 reported by the brewing industry. Highest average earnings in 1953, amounting to \$5,315, were received by the office and supervisory employees of the pulp and paper industry which was also in first place in 1952. Other industries paying \$4,500 or more, in descending order, were as follows: breweries \$4,828, motor vehicles \$4,808, bridge building and structural steel \$4,616, and primary iron and steel \$4,552. In eleven other industries they ranged between \$4,000 and \$4,500 as follows: railway rolling stock \$4,480, petroleum products \$4,415, motor vehicle parts \$4,362, brass and copper products \$4,273, non-ferrous metal smelting and refining \$4,251, boilers, tanks and engines \$4,192, boxes and bags, paper \$4,184, aircraft and parts \$4,162, iron castings \$4,116, agricultural implements \$4,054, and slaughtering and meat packing \$4,025. In fourteen others they were between \$3,500 and \$4,000, in eight they were between \$2,500 and \$3,500, while in the remaining two they were below \$2,500. These were sawmills and butter and cheese with \$1,810 and \$2,477 respectively.

The increase in average earnings of production workers since 1945 paralleled that of office and supervisory employees. Whereas in 1945 there were only four industries averaging over \$2,000, in 1953 the number had jumped to thirty-six. In 1945 the highest annual earnings, amounting to \$2,365, were paid by the motor vehicle industry, while in 1953 the highest earnings averaging \$3,918 were paid by the petroleum products industry which was also in first place in 1951 and 1952. The highest earnings are usually paid by industries in which the proportion of skilled workers is high and the proportion of female workers is low. There were eight industries in 1953 with average annual earnings of \$3,500 or over. These were: petroleum products \$3,918, pulp and paper \$3,808, motor vehicles \$3,796, non-ferrous metal smelting and refining \$3,669, primary iron and steel \$3,588, aircraft and parts \$3,572, bridge building and structural steel \$3,523, and breweries \$3,510. In fifteen other industries annual earnings ranged between \$3,000 and \$3,500, in seven others they were between \$2,500 and \$3,000, in six other they were between \$2,000 and \$2,500, while in the remaining four they were below \$2,000. Employment by sex, and average annual earnings in the forty leading industries are given in Table 20.

20.—Annual Earnings of Employees in the Forty Leading Manufacturing Industries 1953

Average Earnings of Production Workers.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has a very definite regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in the latter industries naturally command relatively higher wages than those in industries where employees are routine workers.

The ranking of provinces and industries as regards annual earnings is, in many cases, different from that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture.

21.—Average Annual, Weekly and Hourly Earnings of Male and Female Production Workers Employed in Manufacturing Industries 1946-53

NOTE.—Figures are based on returns received from establishments employing 15 or more persons; figures for 1946 and 1947 refer to the last week in November whereas those for later years refer to the last week in October.

Average Earnings of Supervisory and Office Employees.—The survey on weekly earnings and hours worked by production workers was expanded in 1946 to include office employees. Earnings and hours worked are reported for male and female workers separately in 13 groups of hours ranging from 30 hours or fewer to 65 hours or more. The earnings reported for the week is the gross amount paid before deductions for income tax, unemployment insurance, etc. Weekly and hourly earnings as well as the hours worked are thus obtained directly from the tabulated results of the establishments covered. The annual earnings however have to be calculated as they are not directly obtained from the survey. To calculate annual earnings the results on weekly earnings are correlated with the results obtained through the annual Census of Industry.

It is the intention in future to alternate the system of classifying employees. One year the basis will be the hours worked per week and the following year it will be on the basis of the earnings per week. Information will thus be made available on both the number of hours worked as well as the range of weekly earnings of employees engaged in manufacturing.

Annual earnings of male office employees in 1953 averaged \$4,327, weekly earnings \$86.43 and hourly earnings \$2.19. For female office employees annual earnings averaged \$2,159, weekly earnings \$43.13 and hourly earnings \$1.14. Average annual earnings of all office employees totalled \$3,707 in 1953, an increase of 63 p.c. since 1946. Weekly earnings at \$73.87 were 68 p.c. higher and hourly earnings at \$1.89 were 78 p.c. higher.

24.—Average Annual, Weekly and Hourly Earnings of Male and Female Supervisory and Office Employees in Manufacturing Industries 1946-53

NOTE.—Figures are based on returns received from establishments employing 15 or more persons; figures for 1946 and 1947 refer to the last week in November and those for later years refer to the last week in October.

A survey of weekly earnings of salaried employees, classified by (1) managerial and professional employees and (2) office workers, was made for the first time in 1951; it will be repeated every third year. Results of the 1954 survey show that in the managerial classification male employees in the petroleum and coal group were the highest paid, followed by paper products, transportation equipment, and electrical apparatus and supplies groups. Male managerial employees in the food and beverages group were the lowest paid. In the same category, female employees in the products of petroleum and coal group were the highest paid and those in the leather group were the lowest paid.

For office workers the transportation equipment group paid the highest salaries to males while the highest salaries to females were paid in the petroleum and coal products group. The lowest salaries paid to both men and women was by the leather products group.

Percentages of Earnings to Net Value of Products.—Table 29 shows the relation between earnings of employees in manufacturing industries and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the earnings of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs and all other overhead charges that ordinarily must be met. The percentage of supervisory employee earnings declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, the percentage of such earnings to value added was above normal owing to decreased industrial activity. It should be borne in mind however that supervisory employees increased 322 p.c. during the period 1917-53 while production workers increased 146 p.c. The percentage of earnings of the latter has fluctuated much less than that of the former. The number of production workers may be adjusted more rapidly to the activity of the industry and wage levels likewise may be adjusted more readily to the price levels of the products. Of the increase in the net value of production since 1939, amounting to \$6,462,017,450, 50 p.c. was passed along in increased earnings.

29.—Percentage of Earnings to Total Net Value of Manufacturing Production 1944-53

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 625.

Subsection 2.—Capital and Repair Expenditure

Prior to 1944 the following information on capital investment was collected: fixed capital—land, buildings, fixtures, machinery, tools and other equipment; working capital—inventory value of raw materials, stocks in process, fuel and miscellaneous supplies on hand; inventory value of finished products; cash, bills and accounts receivable, prepaid expenses, etc. This was replaced by the collection of statistics on the expenditure on fixed capital and repairs.

The remarkable increase in capital employed in Canadian manufactures from the beginning of the 20th century has of course run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000 and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with five employees or more and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1943 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$6,317,000,000 as compared with \$2,234,000,000 in 1917, an increase of 171 p.c., while wholesale prices declined about 13 p.c. in the same period.

Capital expenditure by manufacturers in 1953 totalled \$324,500,000 for construction and \$644,500,000 for machinery and equipment, while \$480,100,000 went for repairs. Of the total capital expenditures amounting to \$969,000,000 in 1953, 13.9 p.c. was reported by the chemical products group, 13.0 p.c. by iron and steel products, 11.8 p.c. by paper products, 11.1 p.c. by transportation equipment, 9.7 p.c. by food and beverages, 9.3 p.c. by products of petroleum and coal, 9.0 p.c. by non-ferrous metal products, etc.

Of the groups reporting capital expenditures of \$25,000,000 or more in 1953, five reported increases and six reported decreases. Of increases for 1953 over 1952, transportation equipment with \$35,300,000 led the list, followed by non-ferrous metal products with \$8,600,000, food and beverages \$7,700,000, products of petroleum and coal \$4,000,000, and wood products \$2,800,000. The paper products group with \$25,400,000 led the list of the groups reporting decreases in capital investment. This was followed by iron and its products with \$21,900,000, chemical products \$18,700,000, electrical apparatus and supplies \$4,400,000, textiles other than clothing \$3,600,000, and non-metallic mineral products \$2,000,000. Total capital expenditures in 1953 declined by \$3,600,000 compared with an increase of \$180,000,000 in 1952 and \$290,000,000 in 1951.

Subsection 3.—Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of product or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery as in flour-milling industry, may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Gross Value of Products.—In 1929 the 719 establishments producing over \$1,000,000 each had an aggregate value of products of \$2,516,064,954 or 62 p.c. of the total for all manufacturing establishments. In 1931 the number of plants in that category was 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. However by 1944 war demands resulted in manufacturing establishments with a production of \$1,000,000 increasing in number to 1,376 with an output of about 75 p.c. of the total value of manufactures. In 1946, with the decline in production of the large war plants, the manufactures of establishments with an output of \$1,000,000 or over declined to 67 p.c. of the total manufactures although the number of plants increased to 1,442. In 1947 the number of plants increased to 1,716 and the proportion of their production to the total for all plants was 72 p.c. As a result of increased prices and expansion in the physical volume of production in the years 1947-53, establishments with a production of \$1,000,000 or over increased to 2,508 in 1953 and their contribution to the total output rose to 79 p.c.

31.—Manufacturing Establishments and Total and Average Production classified by Value of Product Group 1929, 1939, 1944, 1949, 1952 and 1953

¹ Includes central electric stations and dyeing, cleaning and laundry establishments. ² Excludes the Yukon and Northwest Territories. ³ Includes Newfoundland. ⁴ In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625.

Size as Measured by Number of Employees.—In 1929 establishments employing 501 hands or over accounted for 27·3 p.c. of the number of employees engaged in manufacturing. The tendency then in evidence of increasing concentration into larger units was checked by the depression, the percentage dropping to 20·5 in 1933 (central electric stations included) but rising again to 25·6 in 1939. The same held true for establishments employing 101 hands or over. In 1929 they employed 61·9 p.c., in 1933, 55·7 p.c. and in 1939, 61·5 p.c.

The effect of the War on the concentration of industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25·6 p.c. of the total number of employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47·0. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. Altogether there were 12 establishments employing over 7,000 persons.

With the resumption of peacetime production the larger establishments declined in size so that by 1953 only 82 establishments employed over 1,500 persons, as compared with 101 in 1944.

¹ Includes central electric stations and dyeing, cleaning and laundry establishments. ² Excludes the Yukon and Northwest Territories. ³ Includes only those head offices that are not located at a plant. ⁴ Includes Newfoundland. ⁵ Includes establishments which are not classifiable.

Size of Establishment in Leading Industries.—Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of motor vehicles, non-ferrous metal smelting and refining, railway rolling stock, cotton yarn and cloth, primary iron and steel, pulp and paper and aircraft and parts. On the other hand the degree of concentration is low in such industries as women's factory clothing, miscellaneous food preparations, furniture, butter and cheese, bread and other bakery products, fruit and vegetable preparations, sawmills and men's factory clothing.

34.—Percentage Importance of Establishments, each Employing 200 or more Persons in the 25 Leading Industries 1953

PART III.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

Section 1.—Provincial Distribution of Manufacturing Production

This Section gives a general analysis of the concentration of the manufacturing industries in the provinces, the principal features of the manufactures of each province and the distribution of manufacturing throughout the principal cities and towns of Canada. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1953 amounted to \$14,263,289,853 or 80 p.c. of the total gross value of manufactured products. The water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to this progress.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of tobacco and tobacco products, textiles and clothing, paper products and products of petroleum and coal. In each of the other groups Ontario has the greater production of the two provinces. In the production of wood products British Columbia with 37 p.c. of the total holds the dominant position, outranking both Ontario and Quebec which account for 26 and 22 p.c. respectively of the total. In each of the other groups Ontario and Quebec lead by a wide margin.

Subsection 1.—The Manufactures of the Atlantic Provinces

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills and primary iron and steel. In *Newfoundland* manufacturing production is dominated by the forest and fisheries resources. Pulp and paper was the most important industry in 1953 with shipments valued at \$61,436,478 followed by fish processing with \$11,291,848. These two industries accounted for 68 p.c. of the total production of the Province. In *Prince Edward Island* agriculture and fishing resources, butter and cheese, fish processing, and prepared stock and poultry feeds are the leading industries. *Nova Scotia* is renowned for its coal mines and its fisheries as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high grade iron ore supply of Newfoundland. On these resources are based the leading manufactures of fish processing, primary iron and steel, railway rolling stock, sawmills, pulp and paper, shipbuilding and repairs, and butter and cheese. In addition an important petroleum refinery, cotton yarn and cloth, and coke and gas plants add to the diversification of manufacturing in the Province. The forests of *New Brunswick* give a leading place to its pulp and paper and sawmilling industries. Other important manufacturing and processing is based on fish and agricultural resources.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1953 with factory shipments valued at \$163,870,036. This was followed by fish processing with \$67,662,488, sawmills \$48,332,180, primary iron and steel \$40,945,920, shipbuilding \$32,735,553, and railway rolling stock \$30,259,941. These six industries accounted for about 52 p.c. of the total production of the Atlantic region. Other leading industries with shipments valued at \$10,000,000 or more were (in order of value of shipments): sugar refining, butter and cheese, petroleum products, sash, door and planing mills, slaughtering and meat packing, bread and other bakery products, miscellaneous foods, coke and gas products, miscellaneous iron and steel products, printing and publishing, breweries, and prepared stock and poultry feeds.

In the Atlantic region the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over 50 p.c. of the industrial growth. There are however a few outstanding exceptions. Two sizable defence plants have been established in *Nova Scotia*, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in *Newfoundland*. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, cotton textiles, leather and optical goods, industrial machinery and a leather tannery were established, thus broadening the industrial base of the Province.

Despite the rapid development in the Atlantic Provinces since 1949, manufacturing production did not quite keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a slight drop in the Atlantic Provinces' share of the Canadian total which declined from 4.5 p.c. in 1949 to 4.2 p.c. in 1953. In number of persons employed there was an increase of 8.1 p.c. for the Atlantic Provinces as compared with an increase of 13.1 p.c. for Canada as a whole. For earnings of employees the increase was 39.5 p.c. as compared with 52.5 p.c. for Canada, and in selling value of factory shipments 30.1 p.c. as compared with 42.4 p.c.

Until 1953 the increase in employment in the Atlantic Provinces was about the same as for Canada as a whole but in that year it declined by 1.2 p.c. as compared with an increase of 3 p.c. in the Canadian total. This decrease was more than accounted for by a 4 p.c. drop in *Nova Scotia*, the other Atlantic Provinces having continued their upward trend. Selling values of factory shipments were 0.4 p.c. lower in the Atlantic Provinces in 1953 while for Canada as a whole they were 4.7 p.c. higher.

¹ In 1952 gross value of products was replaced by value of factory shipments; see text, pp. 624-625.

n.e.s.; miscellaneous food preparations; machinery, industrial; paints, varnishes and lacquers.

Includes cement, hydraulic; dairy products, bags, cotton and jute; fertilizers; slaughtering and meat packing.

Includes breweries; cotton yarn and cloth; wire and wire goods; aircraft and parts; coke and gas products; and petroleum products.

Includes biscuits; breweries; brooms, brushes and mops; brass and copper products; cotton yarn and cloth; cement, hydraulic; railway rolling stock; sugar refining; and synthetic textiles and silk.

² Publication.

Subsection 2.—The Manufactures of Quebec

Quebec with about 30 p.c. of Canada's total selling value of factory shipments ranks as the second largest industrial province in Canada.

There are several important factors which contributed to the great industrial development of the Province. The geographic situation of the Province is extremely favourable, with an excellent large harbour 800 miles inland where sea-going vessels of heavy tonnage can dock. There is also an extensive highway system linking the small rural areas to the big industrial centres. Other significant factors include abundant forest resources, water power, minerals, agricultural lands and, of even more importance, an industrious and stable population.

Quebec also ranks highest in available water power resources, having more than 40 p.c. of the total recorded for all Canada. Its power development has been remarkable and its installation of 7,717,860 h.p. at the end of 1953 represents over 50 p.c. of the total for Canada. The St. Lawrence River Beauharnois development of 1,408,000 h.p. and the Saguenay River Shipshaw development of 1,200,000 h.p. are the two largest in the country.

Quebec has developed its \$5,400,000,000 manufacturing output with such leading industries as pulp and paper, non-ferrous metal smelting and refining, petroleum products, slaughtering and meat packing, cotton yarn and cloth, men's and women's clothing, tobacco, cigars and cigarettes, synthetic textiles and silk, railway rolling stock and leather footwear. In common with the rest of Canada, Quebec experienced a great industrial expansion following World War II, an expansion affecting existing industrial areas as well as many towns and villages in the accessible areas of the Province.

Quebec's leading industry is pulp and paper with an output of approximately \$511,000,000 in 1953. Quebec is a principal world centre for the production of newsprint with 55 major pulp and paper plants concentrated in the Three Rivers and Shawinigan

Falls districts as well as along the Saguenay, Ottawa and St. Lawrence Rivers. The production of non-ferrous metals has expanded considerably during the past decade. The output of aluminum has made impressive strides during recent years and reached a record total of 548,445 tons in 1953. Quebec, with its new furniture factories, its new titanium smelter and its expanded aluminum-making facilities, is challenging Ontario's long established lead in such fields of manufacture.

Quebec's industries are not as diversified as those of Ontario, although a number have an output approximately 50 p.c. or more of total Canadian production. Quebec predominates in tobacco, cigar and cigarette industries with 94.0 p.c. of the Canadian total; women's factory clothing 68.7 p.c.; cotton yarn and cloth 65.8 p.c.; leather footwear 59.7 p.c.; synthetic textiles and silk 57.3 p.c.; men's factory clothing 56.7 p.c.; railway rolling stock 46.4 p.c.; miscellaneous electrical appliances 44.8 p.c.; and pulp and paper 43.4 p.c.

¹ In 1952 gross value of products was replaced by value of factory shipments; see text, pp. 624-625.

² Sugar refining is also a leading industry. Statistics however are confidential since there are fewer than three firms reporting.

Subsection 3.—The Manufactures of Ontario

Ontario, now recognized as one of the world's major industrial areas, accounts for approximately 50 p.c. of Canada's manufacturing production. Here, the proximity of raw materials, cheap hydro-electric power, and a strategic location in relation to export markets, not only on this Continent but overseas, have been the decisive factors in the development of Ontario to its present industrial position. Most of the manufactures of the Province and most of its population are located in southern Ontario. This area has the inestimable advantage of bordering on the St. Lawrence-Great Lakes Waterway System, which gives access westward to the heart of the Continent and eastward to the shipping routes of the world, and which is also the source of most of Ontario's hydro-electricity. Many new industrial areas are being created as new industries and branch plants of established industries are increasingly being located in the smaller towns.

Despite the great industrial progress made by other provinces, Ontario continues to maintain its predominance and in 1953 produced about 50 p.c. of the nation's manufactured goods. Steel ingot capacity is increasing. Huge investments have gone into the construction of plants in Sarnia for a whole group of new products based on Alberta oil flowing through the Edmonton-Superior pipeline. Other significant developments are taking place in synthetic rubber and industrial and consumer chemicals. Ontario has continued to gain in such traditional lines as motor vehicles, industrial and farm machinery, and the manufacture of household equipment, business and office machinery and electrical apparatus and supplies. Numerous plants making aircraft components and building materials have favoured the Toronto area, and chemical production has been rising in the vicinity of Sarnia and along the lower reaches of the St. Lawrence River between Cornwall and Kingston.

Ontario also has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor vehicles, motor vehicle parts, heavy electrical machinery, agricultural implements, machine tools, starch and glucose, bicycles and the processing of raw tobacco are carried on in practically this Province alone. Of the forty leading industries in Canada in 1953, a substantial number of them were dominated by Ontario's share of the total production. These industries, with the percentage which the production of each bears to that of the 1953 Canada totals are as follows: motor vehicles 98·7 p.c., motor vehicle parts 96·8 p.c., heavy electrical machinery 94·0 p.c., agricultural implements 91·2 p.c., rubber goods 81·8 p.c., primary iron and steel 76·8 p.c., radio and television sets and parts 72·4 p.c., iron castings 71·2 p.c., fruit and vegetable preparations 64·6 p.c., miscellaneous paper products 64·1 p.c., sheet metal products 60·8 p.c., printing and bookbinding 58·7 p.c., aircraft and parts 58·6 p.c., industrial machinery 57·5 p.c., brass and copper products 55·3 p.c., boxes and bags, paper 53·3 p.c., miscellaneous electrical apparatus 53·0 p.c., and furniture 50·4 p.c.

Subsection 4.—The Manufactures of the Prairie Provinces

The leading industries of the Prairie Provinces are those based on agricultural resources—grain-growing, cattle-raising and dairying areas. Next in importance generally are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling stock, especially in the Winnipeg area. The widespread use of motor vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta has led to further development of the refining industry. This industry has made tremendous strides in the Prairie Provinces since 1949. It has increased its proportion of the total manufacturing production of the Prairie Provinces from 8.5 p.c. in 1949 to 12.6 p.c. in 1953. Manitoba, as the early commercial centre of the Prairies, has had a greater initial industrial development than either of the other two. Its natural resources of accessible water powers, forests and, more recently, minerals, have given rise to quite a diversification of industrial production. In Saskatchewan, while the main economic role continues to be played by agriculture, both oil and mineral wealth are being developed.

In water power resources the Prairie Provinces are not so well endowed as the more highly industrialized provinces of Quebec, Ontario and British Columbia. At the end of 1953 power installation in the three Provinces totalled only 1,034,695 h.p. or about 7 p.c. of the Canadian total. Manitoba had 716,900 h.p., Saskatchewan 109,835 h.p. and Alberta 207,960 h.p. With the present developments of natural gas and oil, the Prairie Provinces will in large measure be able to overcome a lack of water power resources which is so vital to industrial development. Manitoba has more water power resources and has developed them to a greater extent than either of the other Prairie Provinces. Practically all the developed sites are located on the Winnipeg River. These supply not only Winnipeg and its suburban areas but, through the transmission network of the Manitoba Power Commission, power is distributed to more than 400 municipalities and a large part of rural areas of southern Manitoba where farm electrification is a primary objective. In Saskatchewan water power development is confined to the northern mining districts. The southern portions of Saskatchewan and Alberta are lacking in water power resources but have large fuel reserves. In Alberta present developments are located in the Bow River basin and serve Calgary and numerous other municipalities between the International Boundary and the area north of Edmonton.

In the Prairie Provinces the nature of developments vary from one province to another. Alberta has moved to the forefront, especially since 1950. There the emphasis has been more on the manufacture of machinery and equipment, including products like drill bits and tanks, heat exchangers and other bulky equipment for the burgeoning oil and gas industries. Chemicals, and especially petrochemicals, have made striking gains; second in terms of new growth, they now embrace various rayon intermediates and polythene plastics, as well as fertilizers and the manufacture of other inorganic products like caustic soda and chlorine. Sizable gains have been made by the expansion of food-processing plants and the construction of additional factories for making building materials.

Manitoba, next to Alberta, has made the best showing on the Prairies, a surprisingly large number of small and medium-sized firms having located in the Winnipeg area since 1945. The clothing industry has outstripped electrical apparatus in employment gains; food processing, building materials and machinery manufacture following in that order. Plantwise however the largest single increase has been in meat packing, although three large electrical apparatus concerns and a sizable new oil refinery have also been established in the Province.

Postwar developments in Saskatchewan by contrast have continued on more or less traditional lines. The largest gains for instance have been recorded in food processing. Notable in this respect has been the establishment of three new fresh water fish-packing plants. The manufacture of building materials, including non-metallic mineral products and lumber, has also increased. However the largest single gain in employment has been in the refining of prairie oil for local use.

Despite the recent rapid development in the Prairie Provinces manufacturing production did not keep pace with the developments in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by the slight drop in the Prairie Provinces' share of the Canadian total which declined from 8.1 p.c. in 1939 to 7.9 p.c. in 1953. There was an increase of 105 p.c. in number of employees as compared with an increase of 102 p.c. for the whole of Canada, and factory shipments were 398 p.c. higher as against 412 p.c. for Canada.

¹ In 1952 gross value of products was replaced by value of factory shipments; see text, pp. 624-625. ² Publications of these figures was authorized by the firms concerned. ³ Include: aircraft and parts, biscuits, and non-ferrous metal smelting and refining. ⁴ Non-ferrous metal smelting and refining is also a leading industry. Statistics however are confidential since there are fewer than three firms reporting. ⁵ Includes cement, hydraulic; fertilizers; and sugar refining.

Subsection 5.—The Manufactures of British Columbia

British Columbia, with factory shipments totalling \$1,366,823,690 in 1953, ranked third among the provinces in manufacturing production. This Province increased its share of the total Canadian output from 7.1 p.c. in 1939 to 7.8 p.c. in 1952, with a slight decline to 7.7 p.c. in 1953.

Forest resources, fisheries, minerals and electric power have given a broad base and wide diversification to its industrial development. The sawmilling industry ranked first in 1953 with a gross value of shipments of \$323,474,522, and pulp and paper second with \$138,883,093. British Columbia holds the dominant position among the provinces in the production of wood products, its output making up 37 p.c. of the Canadian total. The Province also accounted for approximately 48 p.c. of the output of the nation's fish processing industry in 1953 and plays a large part in making Canada the largest fish exporting nation in the world.

A feature of recent progress has been that new developments are taking place in areas far removed from accepted industrial centres. Growing lines of communication and transportation are fanning out from and leading into formerly locked interior communities to tap a vast new potential and offer new sources of provincial economic unity and strength. Factories and plants in remote sections are drawing greater value in employment and dollars from natural resources. The growth of the Province industrially may be indicated by the increase in employment—in 1953, more than double the prewar figure. In dollar terms, gross value of manufacturing was more than double the immediate postwar period, and up more than fivefold since 1939. The consumption of 3,200,000,000 kwh. of electric power by manufacturers during 1953 marked a steady upward climb of 29 p.c. in the past decade.

British Columbia ranks second among the provinces in available water power resources and its hydraulic development, which at the end of 1953 totalled 1,702,858 h.p. out of a Canadian total of 15,140,880 h.p., was exceeded only by Quebec and Ontario.

In the investment in new plant and equipment by British Columbia manufacturers, the wood products group, principally sawmills and new plants manufacturing plywood and furniture, are well out in front both in number of firms and in new development opportunities; paper products rank second.

¹ In 1952 gross value of products was replaced by value of factory shipments; see text, pp. 624-625. ² Other leading industries for which statistics cannot be shown since there are fewer than three establishments in each industry are: non-ferrous metal smelting and refining, sugar refining, and distilled liquors.

Section 2.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially eastern Canada, is intimately connected with their manufacturing industries, which provide employment for a large proportion of the labour forces. In western Canada the cities are more largely distributing centres, though manufactures are increasing rapidly there also.

Table 8 indicates the extent to which the manufacturing industries of Canada are concentrated in urban centres and shows by province the proportion of the gross manufacturing production contributed by cities and towns having factory shipments of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 90 p.c. and 94 p.c. in 1952, and 89 p.c. and 92 p.c. in 1953 respectively of the total manufactures for those Provinces, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions were 72 p.c. and 59 p.c. in 1952 and 73 p.c. and 59 p.c. in 1953 respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

8.—Urban Centres, each with a Gross Value of Factory Shipments¹ of over \$1,000,000, Number of Establishments and Production in these Centres as a Percentage of the Provincial Total, by Province 1953.

NOTE.—Statistics published in this table are sometimes higher than the figures published in Table 11, pp. 639-641, since the table below includes statistics of towns with fewer than three establishments and production of over \$1,000,000 each. It is not possible to publish this information in Table 11 without disclosing the operations of individual establishments.

Province or Territory	Urban Centres with a Gross Value of Factory Shipments of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

CHAPTER XVI.—CAPITAL EXPENDITURES AND CONSTRUCTION

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	688	Subsection 2. Contracts Awarded and Building Permits Issued.....	703
SECTION 2. THE CONSTRUCTION INDUSTRY...	696	Subsection 3. Construction of Dwelling Units.....	707
Subsection 1. Value of Construction Work Performed.....	696	Subsection 4. Government Aid to House Building.....	709

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment together with summaries of other available statistics for the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors.* Section 2 brings together a number of summaries of related series on construction activity: value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed; contracts awarded and building permits issued; construction of dwelling units; and Government aid to house building.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

One of the most important determinants of the level of economic activity within the nation at any time is the volume of investment spending being undertaken by business and by governments. Past experience shows that for the nation as a whole extensive changes may take place from year to year in the level of investment and, because of this variability, capital expenditures form one of the most dynamic factors affecting the level of employment and income in a country.

Capital expenditures are those outlays made to replace, modernize or expand the nation's stock of physical capital, represented by such things as factory buildings, mines, stores, theatres, hospitals, railways, telephone lines and power installations together with the machinery and equipment used to enable workers to produce with greater efficiency an increasing volume of goods and services. Also included in the stock of capital are government owned assets of a physical nature such as roads, canals, office buildings, and all housing whether rented or owner occupied. Defence construction is included but all other defence expenditures are excluded. Excluded also from capital expenditures are outlays for the accumulation of inventories and the acquisition cost of land.

Capital assets assist in providing goods and services over a period of years; some types of assets, such as motors, may have a useful life of a very few years while others, such as buildings or power installations, may continue in profitable use for fifty years or

* Information is given in greater detail in the Department of Trade and Commerce annual report, *Private and Public Investment in Canada*.

more. The creation of these capital assets requires the diversion of resources from production for current consumption to the production of capital goods which will be used in production for future consumption. Thus the rate of investment spending reflects the extent to which a growing nation is providing for the future or is becoming industrialized; it also reflects the opinion of businessmen as to future prospects and of governments as to future demands for their services.

It will be noted from Table 1 that since 1927 there have been two periods when capital spending accounted for a substantial portion of the gross national product. The high rate of growth in the eight years 1948 to 1955 was paralleled in the late 1920's but in that period capital outlays exceeded 20 p.c. of the gross national product for three years only. Investment spending at this level, while indicative of the longterm growth of the country, is important also in the year in which it occurs in giving employment and income to those engaged in the provision of capital facilities.

1.—Capital Expenditures in Canada 1927-56

NOTE.—Actual expenditures 1927-54; preliminary actual 1955; intentions 1956.

¹ Newfoundland included from 1949.

The stepped-up rate of capital spending that occurred in 1955 and the further acceleration expected in 1956 represents the third distinct period of rapid buildup of capital facilities in the postwar years. Since somewhat different factors stimulated the capital expansion in each of these periods the emphasis tended to be on different sectors of activity. All periods however have been characterized by a resurgence of capital spending in the commodity producing industries. In 1947 and 1948 the most important stimulus to capital spending came in the consumer goods industries and in such export industries as agriculture and forest products. The Korean period emphasized investment in the defence and strategic materials industries such as minerals and fuel and power. The current expansion is being led by the export industries, principally those related to forest and mineral products, with strong support from the fuel and power and transportation industries.

Without exception all major sectors of the economy expect either to maintain or to increase their capital spending in 1956. Of the total program 69 p.c. is expected to be spent for construction work and the remainder for purchases of machinery and equipment. In construction it is estimated that nearly all the increase will be accounted for by industrial building and by construction of an engineering type. Such projects as the St. Lawrence Seaway and the gas pipelines eastward and westward from Alberta will add greatly to the volume of engineering construction. Residential building is expected to remain unchanged from the 1955 figure.

2.—Summary of Capital Expenditures and Repair and Maintenance Expenditures by Economic Sector 1954-56

A summary of the capital expenditures in each province for the years 1954-56 is given in Table 4. Such expenditures represent gross additions to the capital stock of the province and are a reflection of economic activity in that area, but the actual production of these assets may generate its major employment in income-giving effects in other regions. For example the spending of millions of dollars on oil refineries and pipelines in western Canada means activity in the steel industries of Ontario as well as construction activity in the Prairie Provinces.

4.—Summary of Capital Expenditures and Repair and Maintenance Expenditures by Province 1954-56

Section 2.—The Construction Industry

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction. The slight differences between these figures and the corresponding figures of Section 1 are accounted for by rounding and minor revisions.

The intended construction program in Canada for 1956, including all sectors of the Canadian economy—business, institutions, government and housing—is estimated at \$6,271,000,000, a figure considerably above the record set in 1955. The volume of new construction carried out in 1954 increased 1 p.c. over 1953 and preliminary estimates for 1955 show a 12 p.c. rise over 1954, bringing the volume of construction to a new high in postwar years. Repair construction expenditures increased 5 p.c. from 1953 to 1954 but decreased 4 p.c. in 1955.

The importance of the construction industry in the economy of the country is illustrated by the fact that it continues to account for more than 18 p.c. of the gross national product. Table 5 shows construction, both new and repair, in constant as well as current dollars.

* An explanation of sources and methods is given in the 1955 Year Book, p. 727, and DBS annual report *Construction in Canada*.

Repair.....	974	1,023	1,012	1,110

¹ Work done by the labour forces of utilities, manufacturing, mining and logging firms and government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Most of the increase in construction in 1956 is expected to occur in the engineering category as will be seen from the figures of Table 7. The largest advances will be in gas and oil facilities which are expected to show an increase of \$149,000,000 and in electric power construction which will be up by \$131,000,000. However all the engineering categories are set at higher amounts for 1956.

In building construction, industrial building is expected to register the greatest increase; that category is estimated at \$554,000,000 in 1956 as compared with an estimated \$409,000,000 in 1955. All other building categories also show substantial gains and housing continues to account for about 30 p.c. of total construction—29.6 p.c. in 1954, 32.8 p.c. in 1955 and 29.1 p.c. in 1956.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 10. The statistics given for Canada as a whole may be considered as relatively accurate but those given for individual provinces and by class of builder are approximations only. All estimates given for average numbers employed, earnings, and cost of materials used are based on ratios of these items to total value of work performed, derived from survey work done in 1955 and applied to the total value-of-work figures. Although these ratios were calculated in some detail by type of industry still further refinements are required. There are also some difficulties in obtaining the precise geographical location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However if used with these qualifications in mind the table provides useful estimates.

In using the employment data, it is also of value to have a knowledge of the methods used in collecting the basic information on which the estimates are calculated. Respondents are requested to report the total number on payroll during the last pay period of the month; additions of the monthly data are divided by 12 to compute the annual averages. Thus the resulting figures are representative of the total number of employees working full time throughout the year. The total number on the payroll at any given time may of course be above or below this average.

10.—Average Numbers Employed in Construction, Earnings, Cost of Material Used and Value of Work Performed by Province and by Contractor 1953-56

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

Contracts Awarded.—According to figures published by *MacLean Building Reports Limited*, the value of contracts awarded in 1955 increased by \$1,028,632,800 or 48 p.c. over 1954. The most substantial increase was in engineering construction which more than doubled during the year.

Decreases in the value of construction contracts awarded in 1955 compared with 1954 in the Provinces of Prince Edward Island, Nova Scotia, Manitoba and Saskatchewan were more than offset by increases in the other provinces. The greatest absolute increases were shown by British Columbia and Ontario.

11.—Value of Construction Contracts Awarded 1920-55

Building Permits.—The estimated value of proposed construction as indicated by building permits issued in 204 municipalities in 1955 amounted to \$1,309,024,449, an increase of 14 p.c. over the 1954 estimate of \$1,151,087,193. The 1954 figure was 6 p.c. above the \$1,088,879,902 reported for 1953.

Table 14 shows the value of building permits issued in fourteen metropolitan areas across Canada. In 1955 the permits issued in these areas made up 73 p.c. of the total for the 204 municipalities.

14.—Estimated Value of Building Permits Issued in Fourteen Metropolitan Areas 1953-1955

Windsor.....	2,578	2,363	2,351	Vancouver.....	8,386	8,792	10,318

The indexes given in Table 15 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

15.—Value of Building Permits Issued in 204 Municipalities and Index Numbers of the Building Construction Industries 1947-55

Subsection 3.—Construction of Dwelling Units

Most of the postwar population increase in Canada has been located in urban centres and has been accompanied by a concentration of house building activity in these centres. Of the total increase in dwelling stock of 800,000 units since the end of World War II 69 p.c. have been in urban centres of over 5,000 population and 51 p.c. in thirteen of the metropolitan areas shown in Table 19 (comparable figures over the period are not available for Edmonton and Calgary).

This pattern continued in 1955 when the numbers of dwellings started and completed, at 138,000 and 128,000 respectively, exceeded the activity of any previous year. Of the dwellings started 52 p.c. were in metropolitan areas and 77 p.c. in urban areas. Many of the dwellings started in areas defined as rural were situated close to the larger urban centres.

There was a considerable increase in starts of single family dwellings in 1955 as compared with 1954 and a large part of the increase was financed under the new National Housing Act; 1955 was the first full year of the operation of the Act with its provisions for easier terms to home-owner borrowers in respect of lower down-payment requirements and a longer period of loan payment.* The Act also provides for the participation of the chartered banks in mortgage lending and these institutions played an important role in the supply of a record volume of funds for mortgage loans in 1955. The effect of these provisions was to raise the proportion of dwellings started under the Housing Act from 38 p.c. in 1954 to 45 p.c. in 1955.

* The National Housing Act and assistance thereunder is dealt with in detail at pp. 709-712.

Subsection 4.—Government Aid to House Building*

Federal Government Assistance.—Federal Government assistance to house building in Canada is primarily assistance to private builders including prospective home owners, merchant builders and investors in rental housing. In the ten year period 1945-54, 8 p.c. of the new permanent dwellings completed were built directly on Government account and 26 p.c. represented private enterprise dwellings for which some public assistance was provided. The Federal Government carries on house building operations under programs providing married quarters for the Armed Forces and until 1953 rental units for veterans. The Federal Government also undertakes joint rental housing projects in co-operation with provincial governments (*see p. 711*).

The Federal Government entered the housing field on a continuing basis in 1935 with the passage of the Dominion Housing Act, an Act succeeded by more extensive and detailed legislation in 1938, 1944 and 1954. Public assistance to private builders is now provided under the terms of the National Housing Act 1954, together with the Canadian Farm Loan Act 1927, the Veterans' Land Act 1942, and the Farm Improvement Loans Act 1944. The National Housing Act represents the Government's main legislation in the housing field and provides public assistance to private house building mainly through a system of mortgage loan insurance. The Central Mortgage and Housing Corporation, incorporated by Act of Parliament passed in December 1945, is the agency responsible for the provision of most of the public assistance to housing. It administers the present Housing Act and earlier housing Acts and co-ordinates Government activities in the housing field. The Corporation supervises the Department of National Defence program for the construction of married quarters for the Armed Forces.

The National Housing Act 1954.—The National Housing Act 1954 provides assistance to private house building primarily through a system of public insurance of mortgage loans made by private lenders to finance the construction of housing or home conversion. To broaden the potential supply of mortgage funds for these purposes the Act includes provisions which permit lenders, approved under the Act, to sell them to individuals and other investors who are not approved lenders.

Other types of assistance provided in the Act include Federal Government loans for house building undertaken by limited dividend housing corporations and primary producers and by builders in areas where mortgage loans under the Act are not available from private

* Prepared in the Economic Research Department, Central Mortgage and Housing Corporation Ottawa.

lenders. Provision is also made for federal-provincial co-operation in land assembly and development and in the construction and ownership of low rent housing; assistance in housing redevelopment and the clearance of blighted areas; and rental guarantees and guarantees of loans for home improvement and extension.

The insurance of a mortgage loan made under the Act requires that a single fee for the insurance be paid by the borrower at the time the loan is made. This fee is added to the amount of the approved loan and varies between $1\frac{1}{2}$ p.c. and $2\frac{1}{2}$ p.c. of the loan amount, depending upon whether home owner or rental housing is being financed and whether instalment advances are made. The Central Mortgage and Housing Corporation is the underwriter.

In an insurance claim the approved lender is required to complete such legal proceedings as are necessary to transfer the property, with clear title, to the Central Mortgage and Housing Corporation. The regulations under the Act require that the insurance claim be made within 30 days of the time the claimant acquires clear title. The settlement includes allowances for principal, interest and settlement costs. The claimant receives 98 p.c. of the amount owing on the principal at the time foreclosure proceedings were instituted or, where no such proceedings were involved, at the time the property was acquired, less any repayments made by the borrower during proceedings. The payment also includes the full amount of such approved charges as were advanced to the borrower in order to maintain the security of the mortgage, e.g., fire insurance premiums. The allowance for interest payments in default at the time the property is conveyed to the Corporation is 98 p.c. of the amount of such payments due or accrued for the default period up to a maximum of six months, less any repayments made by the borrower during proceedings. An additional amount is paid when the default period is more than six months. For settlement costs the claimant receives \$125 as compensation for the acquisition fee and other approved legal disbursements.

For insured loans on dwellings for home ownership, other than for certified defence workers, the maximum loan-to-value ratio is set at 90 p.c. of the first \$8,000 of the lending value and 70 p.c. of the remainder, subject to a maximum loan of \$12,800 set by regulation. For a duplex the loan is calculated on the same 90 p.c. and 70 p.c. basis for the first half of the lending value with 80 p.c. allowed on the second half of the lending value, subject to a maximum set by regulation at \$15,300. For dwellings for certified defence workers the ratio of the loan amount to lending value is 90 p.c. For farm dwellings loans may be made for \$10,000 or two-thirds of the appraised value of the farm, whichever is the lesser amount.

For rental housing projects insured loans may be made up to 80 p.c. of the lending value of the project and up to a maximum amount of \$7,000 per dwelling for multiple family dwellings. For home conversion insured loans must not exceed the lesser of 70 p.c. of the lending value of the structure, including land, when the alteration is completed, or the cost of the alterations together with the amount necessary to discharge all encumbrances on the title to the land.

The usual term of an insured loan for a dwelling for home ownership is 25 years but loans for shorter periods may be approved at the borrower's request. For rental housing projects the term of the loan may not exceed 25 years and for home conversion the maximum is 15 years.

The maximum rate of interest on insured loans is set by the Governor General in Council. At the time the rate is promulgated it may not exceed the yield on 20 year Federal Government bonds by more than $2\frac{1}{2}$ p.c. On Feb. 17, 1955 the maximum rate on insured loans for home ownership, home conversion, rental housing projects and farm housing was reduced by regulation from $5\frac{1}{2}$ p.c. to $5\frac{1}{4}$ p.c. On May 9, 1955 the Royal Bank of Canada announced that it would approve loans under the Act at an interest rate of 5 p.c. This change was followed by many other approved lenders. For all insured loans the Central Mortgage and Housing Corporation approves the plans and specifications, makes appraisals and undertakes the construction inspections to ensure compliance with approved standards.

To facilitate the development of a secondary market in insured mortgage loans the 1954 Act provides that the insurance policy on a mortgage loan made under the Act may be assigned to the purchaser should the loan be sold, provided that the loan continues to be serviced by an approved lender. As a result individuals and other investors who are not approved lenders may invest in insured mortgages by arranging with an approved lender to service the loan. In 1955 approved lenders had sold approximately \$16,906,000 worth of insured mortgages. The Act also authorizes the Central Mortgage and Housing Corporation to buy and sell insured mortgage loans as well as to make loans to approved lenders upon the security of insured mortgage loans. By endowing the insured mortgage loan with a degree of liquidity and transferability not normally present in the mortgage market the potential supply of mortgage funds is greatly broadened.

The National Housing Act authorizes the Central Mortgage and Housing Corporation to make mortgage loans to limited dividend corporations and to companies engaged in primary industries of logging, lumbering, fishing and mining. Loans to limited dividend housing corporations are made at low rates of interest for the construction of low and medium rental housing units. By July 31, 1955, 48 companies had been formed under the sponsorship of business companies or local groups and the financing of some of them was supplemented by municipal grants or contributions from service clubs. Many of the dwelling units constructed by these companies are occupied by widows and old age pensioners. The Central Mortgage and Housing Corporation is also authorized to make mortgage loans for house building in areas where insured mortgage loans are not available from approved lenders. These loans are made on the same basis as those made by approved lenders under the Act.

The Act provides that, following agreements between a provincial government and the Government of Canada, the Central Mortgage and Housing Corporation may undertake jointly with the province the development of a housing or land assembly project. Capital costs, profits and losses of such projects are shared 75 p.c. by the Federal Government and 25 p.c. by the province. The provincial government in turn may require the municipality concerned to participate in the provincial share.

By July 1955 all provinces except Prince Edward Island had passed complementary legislation and projects were under way or completed in six provinces. Under this legislation, three main types of housing agreement have been involved: (1) the construction of houses for rental on an economic or sub-economic basis; (2) the assembly and servicing of residential lots for sale to builders and prospective home owners; and (3) combined rental housing and land assembly projects where a portion of the land developed is used for housing and the remainder sold. Completed rental housing projects are administered by local housing authorities whose members are appointed by provincial Order in Council. Local authorities have been established in 30 municipalities. By July 31, 1955, 73 projects had been approved—28 for land assembly only, 12 for combined land assembly and rental housing and 33 for the erection of rental housing over the whole site. The 45 rental projects relate to 5,428 rental units, 2,986 of which had been completed. The land assembly projects involve the servicing of 12,211 lots, 3,132 of which had been completed and sold to builders and prospective home owners.

Under the land assembly provisions of the Act lending institutions are guaranteed the recovery of their investment and a return of 2 p.c. on land development projects. These projects involved the development of raw land into serviced lots for residential purposes and their sale at prices considerably below the market price for comparable lots. Little activity has taken place under these provisions in recent years.

The National Housing Act provides that, where a municipality agrees to buy and clear an area of substandard housing with a view to disposing of the site for new rental housing or for other public purposes, a federal grant may be made to the municipality amounting to one-half its net loss on the land transaction. By the end of July 1955 a total of \$3,216,937 in grants had been made to municipalities for the clearance of 75 acres of blighted land.

The rental guarantee plan of the National Housing Act is designed to encourage the construction of rental housing by private builders. Owners of projects built under the plan are guaranteed a return of rent sufficient to pay taxes, operating expenses, debt service and a minimum return of 2 p.c. on their equity. From the plan's inception in 1948 to July 31, 1955 projects were approved involving 21,733 units having an estimated cost of \$164,643,000.

The National Housing Act provides for federal guarantee of loans for home improvement and extension. These loans are secured by promissory notes and require an insurance charge of 1 p.c. of the amount of the loan. Prior to 1955 the guarantee provisions were in force only for loans to borrowers in the Municipal District of Yellowknife, N.W.T. Effective Jan. 1, 1955 these provisions were put into force for veterans under subsisting smallholding contracts with the Director of the Veterans' Land Act and, effective February 1955, the guarantee provisions came into force for all borrowers eligible under the Act. By the end of July 1955 loans for home improvement amounting to \$11,882,065 and involving 10,135 dwelling units had been approved under the Act. All of these loans were made by banks.

The Canadian Farm Loan Act 1927 (R.S.C. 1952, c. 36, amended by c. 309).—This legislation provides for federal longterm loan assistance for housing as well as for other farm purposes. (See pp. 392-393.)

The Veterans' Land Act 1942 (R.S.C. 1952, c. 280).—This Act is administered by the Department of Veterans Affairs and provides a form of loan and grant assistance to veterans for housing and other purposes. (See pp. 310-312.)

The Farm Improvement Loans Act 1944 (R.S.C. 1952, c. 110).—This Act provides for guarantees for intermediate and short-term loans made by approved lending agencies to farmers for housing and other purposes. (See pp. 393-394.)

Statistics of Federal Government Assistance to House Building.—The extent of federal assistance to house building from the passage of the first federal housing legislation in 1935 to 1954 is given in Table 20.

¹ Exclusive of small number of dwellings built by Federal Government Departments as part of their normal operations.

² Newfoundland included from 1949.

³ Includes 7,345 units completed with loans made by private lending institutions and insured by the Federal Government.

In 1954 a total of 106,338 dwellings were completed in Canada. Of these 1,713 were built directly by the Federal Government; 29,758 were built either with Federal Government loans, including joint loans under the National Housing Act 1944 or with loans insured by the Federal Government under the National Housing Act 1954 (see p. 709); and 576 were built with guarantee assistance by the Federal Government.

² Includes 7,345 units completed with loans made by private lending institutions and insured by the Federal Government.

The record volume of house building activity in 1955 was made possible by an ample supply of mortgage funds. Only in the latter part of the year did some tightening take place. For most of the year the ready availability of mortgage money was reflected in a lower level of interest rates. Under the National Housing Act the rate charged on most loans between May and November was 5 p.c., one-quarter of one per cent below the maximum set by regulation. A corresponding decline in conventional rates was also reported.

22.—Net Loans Approved under the National Housing Acts by Province 1951-55

NOTE.—Figures for 1945-50 will be found in the 1955 Year Book, p. 744.

In 1955 institutional lenders approved mortgage loans, of all types, amounting to \$1,171,000,000. This increase comprised a 34 p.c. rise in lending for new housing and a 24 p.c. rise in mortgage loans for other purposes as compared with 1954. Institutional loan approvals for new housing increased from \$635,000,000 in 1954 to \$850,000,000 in 1955. Of this increase \$175,000,000 was under the National Housing Act and the remaining \$40,000,000 on conventional loans, bringing total institutional lending under the Act to \$639,000,000 compared with a total of \$211,000,000 for conventional loans for new housing.

While life insurance companies maintained their over-all position as the main institutional mortgage lenders, the chartered banks became the most active group under the National Housing Act. The banks were responsible for all of the increase in lending under the Act from 1954 to 1955, bringing their share of all such insured lending to 51 p.c. In 1954 when the banks were lending for only part of the year, their share of insured loans was 34 p.c.

The average income of home owners whose dwellings were financed under the Act in 1955 was \$5,207 compared with \$5,065 in 1954. These amounts represent the income of the borrower only and do not include the income of dependants. The average down-payment was \$2,821 compared with \$2,993 in 1954, while the gross debt service, representing monthly payments of mortgage principal and interest and real estate taxes increased from \$918 to \$934. These payments represented, for the average borrower, 18.6 p.c. of income.

Provincial Government Assistance.—As stated previously (*see* p. 711), all provinces except Prince Edward Island had, by July 1955, passed complementary legislation respecting Sect. 36 of the National Housing Act 1954, which provides for joint federal-provincial housing and land assembly projects. In addition separate legislation with respect to housing has been enacted by the Provinces of Quebec and Ontario.

Quebec.—An "Act to improve housing conditions" (S.Q. 1948, c. 6) empowers the Province to pay a subsidy on interest charges in excess of 3 p.c. on new dwellings built between Jan. 15, 1948 and Jan. 15, 1953. An amendment (S.Q. 1951-52, c. 7) extends coverage of the Act to dwellings completed after Jan. 15, 1953. A further amendment (S.Q. 1953-54, c. 7) increases the authorization for expenditures under the Act from \$40,000,000 to \$55,000,000.

Ontario.—The Housing Development Amendment Act 1952 empowers the Province and a municipality to enter into joint housing projects and empowers a municipality to contribute to the cost of a housing project or to issue debentures for the purpose of a housing project without reference to its municipal board or the assent of its electors. For

industries locating in rural areas and in small communities, the Province and municipality may participate with the Central Mortgage and Housing Corporation in the development of joint housing projects, part of the cost of which will be borne by the Corporation. Under certain conditions the Province may expropriate land in municipalities for the purpose of housing projects. The Act came into force Apr. 10, 1952 and amended the Housing Development Act (R.S.O. 1950, c. 174).

Under the Planning Amendment Act 1952 municipalities with an approved official plan may designate an area within the municipality as a redevelopment area and, upon the passage of a bylaw, may acquire land within that area and clear and prepare it for residential, commercial, industrial or other designated purpose. The Act came into force May 1, 1952 and amended the Planning Act (R.S.O. 1950, c. 227).

The Rural Housing Assistance Act 1952 authorizes the establishment of a Crown company—the Rural Housing Finance Corporation—which is empowered to lend and invest mortgage money in order to provide financial assistance in the building of new houses in villages and rural areas. Moreover the Corporation may lend money independently or in co-operation with the Central Mortgage and Housing Corporation or with any approved lending institution. The Act came into force on Apr. 10, 1952.

The Junior Farmer Establishment Act 1952 provides for the establishment of a corporation for the purpose of making loans to assist young qualified farmers in the purchase, development and operation of their farms. The corporation may make loans for the erection and improvement of farm houses. A loan may be secured as first mortgage on farm property and shall not exceed \$15,000, repayable in 25 years. The Act came into force on Apr. 10, 1952.

The Elderly Persons Housing Aid Act 1952 authorizes the Province to make grants to any limited dividend housing corporation approved by a municipality and to which a loan has been made under the National Housing Act. These grants are to assist in the construction and equipment of low rental housing units for elderly persons. The amount of any grant will be based on the lower of \$500 for each dwelling or 50 p.c. of the capital cost of the project to the corporation other than the amount covered by the mortgage loan.

CHAPTER XVII.—SURVEY OF PRODUCTION*

CONSPECTUS

	PAGE		PAGE
SECTION 1. TRENDS IN COMMODITY PRODUCTION.....	717	SECTION 3. PROVINCIAL DISTRIBUTION OF PRODUCTION.....	719
SECTION 2. INDUSTRIAL DISTRIBUTION OF PRODUCTION.....	717	SECTION 4. PER CAPITA NET VALUE OF PRODUCTION.....	722

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

The scope of the Survey of Production is limited to industries chiefly engaged in the actual production of commodities. The activities of such industries as transportation, communication, trade, finance and service are excluded, except for certain of their costs which are indirectly reflected in the value of output of the commodity producing industries; for instance costs of such business services as insurance, advertising, telephone, etc., to the commodity producing industries are included in the selling or gross value of their products. This is in contrast to the widely used Gross National Product series (see Chapter XXV) which encompasses all industries.

In obtaining the "net" value for each commodity industry the cost of materials, fuel, purchased electricity and process supplies (but not other business services) consumed in the production process is deducted from the selling or gross value of output. The resulting net value of production (or value added) is generally considered more significant as a measure of output than gross value of production and is therefore used in the following analyses and tables.

The measurement of value added is similar, although not strictly comparable, to the concept involved in the contribution of each industry to gross national product at factor cost (net income originating plus depreciation). Apart from variations in the statistical structure the main difference is that value added, as computed for each commodity producing industry, includes the cost of business services as described above. In national income accounting the contribution of these services to gross national product at factor cost is classified to the non-commodity industries from which they originate.

One of the major advantages of the commodity production series is that the statistics may be classified by provinces. With the exception of personal income and its major components the geographical distribution of gross national product is not available mainly because profits cannot be allocated according to the provinces in which they are generated by productive activity. A more detailed explanation of the series is given in the current DBS Bulletin *Survey of Production*.

A recent major revision made in the statistics of the construction industry has affected the comparability of the survey of production figures presented here and in the 1955 Year Book and those presented in earlier editions. A description of that revision together with revised data is given in DBS Bulletin *Survey of Production 1948-52*.

*Prepared in the Business Statistics Section, Research and Development Division, Dominion Bureau of Statistics.

Section 1.—Trends in Commodity Production

The net value of Canadian commodity production during 1953 (the latest year for which final figures are available at the time of going to press) amounted to \$14,538,000,000, an advance of nearly 6 p.c. over the 1952 total. The most important expansionary influence in the economy in 1953 was the continued growth of consumer expenditures, reflecting further increases in "real" incomes. Investment in new construction also showed an impressive gain over 1952 particularly in the housing component. Inventory accumulation was quite substantial, reflecting a shift from a position of net liquidation of business inventories in 1952 to one of considerable build-up in 1953. Defence expenditure, which in the preceding two years was one of the key factors in the total expansion of output, rose only moderately in 1953 and the value of exports showed a moderate decline.

Preliminary data for 1954 indicate a decrease in the net value of commodity production for the first time since 1945. A number of factors lay behind this development including: a sharp drop in agricultural production; a turnaround of business inventories from the substantial build-up in 1953 to a position of net liquidation; a decrease in business outlays for plant, machinery and equipment; a decline in exports; a reduction in defence expenditures; and lower demand for consumer durable goods. These downward pressures were partly counterbalanced by continued strong demand for non-durable goods and a considerable increase in outlays for new housing. The advance data by industries indicate that the net value of agricultural output dropped by about 28 p.c. in 1954 while other primary industries advanced—mineral production (in volume terms) by nearly 13 p.c., electric power by more than 5 p.c., the volume of seafish landings by nearly 10 p.c. The forestry industry also showed some gain in output. On the other hand the net value of manufacturing production declined by about 2 p.c., the major decreases occurring in the durable goods industries of iron and steel products and transportation equipment. A moderate increase was recorded by non-durable manufacturing industries despite considerable declines in textiles, clothing and rubber goods. The net value of construction increased slightly as compared with the previous year.

Section 2.—Industrial Distribution of Production

In the five years from 1949 to 1953 inclusive the total net value of commodity production increased by nearly 46 p.c., an advance contributed to by sustained demand for consumer goods both at home and abroad, by the industrial and resource development programs and by the expansion of defence industries. All industrial groups except trapping increased during the period.

The contribution of the primary industries to the total commodity production declined from 33 p.c. in 1949 to 28 p.c. in 1953, almost wholly as a result of the fall-off in the proportion contributed by the agriculture industry from 20 p.c. to 15 p.c. during the period. The net value of agricultural output in 1953 at \$2,241,316,000 was 11 p.c. higher than in 1949 but was well below the record value of \$2,653,678,000 achieved in 1951 and also below the 1952 total. Although the 1953 wheat crop was very large it was considerably smaller than the extraordinary 1952 crop.

Operations in the woods recorded a steady advance from 1949 to 1952 but declined in 1953; the net value of forestry production in the latter year was 46 p.c. higher than in 1949 but about 5 p.c. below the peak of 1952. The fall-off in 1953 was attributable in large measure to a decline in the external demand for pulpwood and mining timber. The value of the primary fisheries industry reached a peak in 1951 and then declined in the next two years; the drop in 1952 was mainly caused by a decline in seafish landings and that in 1953 by lower prices for fishery products. Since 1951 the net value of the trapping industry has been declining.

The net value of the mining industry advanced each year from 1949 to a record high of \$791,000,000 in 1953, a 39 p.c. increase. Fuel production recorded the greatest advance by more than doubling during the period, an increase much more than accounted for by

a 300 p.c. advance in the output of petroleum. The volume output of metals rose steadily from 1949 to 1952 but fell off by about 2 p.c. in 1953 as a result principally of labour disputes in gold mining; over the five year period production of iron ore increased by 77 p.c. Asbestos was the main contributor to the 50 p.c. increase in the output of industrial minerals during the period. The output of electric power increased from 1949 to 1953 by more than 40 p.c. in volume and 66 p.c. in value.

The contribution of secondary production (manufacturing and construction) to the total commodity output advanced during the 1949-53 period from 67 p.c. to 72 p.c., mainly as a result of the very extensive construction activity during the period. In 1953 the construction industry contributed nearly 17 p.c. to the aggregate of net value compared with less than 14 p.c. in 1949 and the manufacturing industry's share rose from 53 p.c. to 55 p.c. in the same comparison.

The net value of manufacturing production increased 50 p.c. in the 1949-53 period—durable manufactures by 65 p.c. and non-durables 38 p.c. Among the durable industries, output of transportation equipment more than doubled in value, that of electrical apparatus and supplies and non-metallic mineral products advanced 70 p.c. and 67 p.c. respectively, and production of iron and steel products gained 50 p.c. In the non-durables sector petroleum and coal and rubber products recorded the highest value increases, the former a gain of 80 p.c. and the latter one of 70 p.c. Leather products, textiles and clothing were among the industries showing moderate increases.

The construction industry recorded the greatest proportionate gain of all major commodity producing industries during the 1949-53 period. The net value increased by 79 p.c. from \$1,371,000,000 to \$2,454,000,000 as building activity and construction costs continued their postwar advances. Investment in non-residential construction rose at a much faster rate than that in housing, following the major advances in industrial and resource development.

1.—Net Value of Production by Industry 1949-53

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process. Data for fisheries and trapping represent total value.

Section 3.—Provincial Distribution of Production

All provinces and territories had a higher net value of production in 1953 than in 1949. Alberta showed the greatest proportionate advance with a gain of 60 p.c. British Columbia, Quebec and Ontario followed with increases of 49 p.c., 48 p.c., and 47 p.c. respectively. Net output in Saskatchewan rose by 38 p.c. and the other provinces recorded more moderate advances.

Newfoundland.—The net value of commodity production in Newfoundland in 1953, exclusive of agriculture, amounted to about \$154,000,000, a little more than 1 p.c. of the Canadian total. In this Province factory output, mainly pulp and paper and processed fish, made up 38 p.c. of the total commodity production. Construction was next in importance, followed by forestry and mining. Primary fisheries represented about 8 p.c. of the provincial output.

Prince Edward Island.—The output of Prince Edward Island was a little more than 10 p.c. higher in 1953 than in 1949. Its net value in the later year made up about 0.2 p.c. of the total Canadian output. The economy of the Province is mainly agricultural, farm output in 1953 accounting for half of the net value of production and consisting mainly of livestock, potatoes and dairy products. Construction and manufactures made up the bulk of the non-farm output.

Nova Scotia.—The net value of production in Nova Scotia advanced 25 p.c. from 1949 to 1953 and represented 2.3 p.c. of the national total in the years 1951-53. In 1953 manufacturing accounted for 39 p.c. of the Province's production, primary iron and steel, shipbuilding, fish processing, pulp and paper and sawmills being the leading industries. Construction's share in the same year was 22 p.c., mining 16 p.c. and agriculture 10 p.c. In recent years coal mining has contributed about 80 p.c. of the value of the mineral output, and livestock, dairy products, poultry and eggs are the principal farm products.

New Brunswick.—The value of commodity output in New Brunswick increased by over 22 p.c. in the 1949-53 comparison and in recent years has accounted for about 2 p.c. of the Canadian aggregate. In 1953 manufacturing made up 46 p.c. of the provincial output, the predominant industries being pulp and paper, sawmilling, shipbuilding and fish processing. Agriculture and forestry, the most important primary industries, accounted for 15 p.c. and 10 p.c. respectively of the net output while construction represented 20 p.c.

Quebec.—The increase in Quebec's commodity production from 1949 to 1953 amounted to 48 p.c. and the Province's total in 1953 made up 26 p.c. of the Canadian output. In that year manufacturing represented nearly 64 p.c. of the provincial production. Pulp and paper was most important among the industries, accounting for 10 p.c. of their output, but highly important also were metal smelting and refining, aircraft, railway rolling stock, clothing and textiles. Agriculture's share of the provincial output was lower in 1953 than in 1949, having decreased from 11 p.c. to 8.5 p.c. but construction on the other hand rose from 12 p.c. to 15.4 p.c.

Ontario.—The net value of commodity production in Ontario increased from \$4,082,000,000 in 1949 to \$5,982,000,000 in 1953 or by nearly 47 p.c. The Province's share of the Canadian total was 41 p.c. in the later year, a proportion little changed during the period. The economy of this Province is dominated by manufacturing which represented 69 p.c. of the output in 1953 as compared with 66 p.c. in 1949. The manufacturing industries that contributed more than \$100,000,000 to the value of output in 1953 included (in order of importance): motor vehicles, pulp and paper, primary iron and steel, metal smelting and refining, aircraft, heavy electrical machinery, rubber products and motor vehicle parts. Agriculture accounted for 9 p.c. of the provincial total and construction for 14 p.c. in 1953.

Manitoba.—In 1953 Manitoba's net value of production, at \$573,000,000, was 19 p.c. higher than in 1949 and accounted for 4 p.c. of the total value for Canada. Manufacturing, dominated by the slaughtering and meat packing industry and the railway rolling stock industry, represented 40 p.c. of the provincial output. The proportion accounted for by agriculture dropped from 42 p.c. in 1949 to 30.5 p.c. in 1953 while that accounted for by construction advanced from 15 p.c. to 21.5 p.c. over the period.

Saskatchewan.—The economy of Saskatchewan is largely dependent on agriculture which normally accounts for about 75 p.c. of the Province's net value of production. The fact that the 1953 wheat crop, although one of the largest on record, was considerably below the high level of 1952 contributed to an appreciable decline in provincial output in the later year. However compared with 1949 the value of production in 1953 was higher by more than 38 p.c. and accounted for 6 p.c. of the Canadian total. Manufacturing activity, consisting mainly of petroleum refining, meat packing, flour mills, breweries and butter and cheese factories represented 9 p.c. of the provincial output. In this Province also construction showed a higher relative increase than other industries in the 1949-53 period and represented nearly 14 p.c. of the provincial output in 1953.

Alberta.—Alberta's commodity output in 1953 represented over 8 p.c. of the national total and was 60 p.c. higher than in 1949. Because of the rapid advance in the value of mineral production and in construction activity, agriculture has progressively declined in relative importance since 1949 when it accounted for 48 p.c. of the provincial total as compared with 36 p.c. in 1953. The net value of the mining industry more than doubled in the five year comparison and in 1953 represented over 19 p.c. of the Province's output. Manufacturing, particularly petroleum refining, meat packing, sawmilling and brewing, also advanced considerably, amounting to 17 p.c. of the 1953 total. Construction stood second among the Province's industries in the five year period and in 1953 accounted for 25 p.c. of the total commodity production compared with 19 p.c. in 1949.

British Columbia.—The net value of output in British Columbia, which represents about 9 p.c. of the national commodity production, increased from \$884,000,000 in 1949 to \$1,320,000,000 in 1953, a gain of more than 49 p.c. It is the third ranking province in value of net output. Manufacturing is the leading industry and accounted for nearly 47 p.c. of the provincial total in 1953, a proportion little changed since 1949. The principal manufacturing industries are sawmilling, pulp and paper, veneers and plywoods, fish processing, fertilizers and shipbuilding. Construction ranked second in value of output in the Province and represented 23.5 p.c. of the total in 1953; forestry accounted for 12 p.c. and mining for 6 p.c. The considerable decline in the mining industry from 9 p.c. in 1952 reflected the sharp drop in the price of zinc and lead, two of the Province's most important metals.

Section 4.—Per Capita Net Value of Production

The advance in the net value of commodity production in the years from 1949 to 1953 was accompanied by a 10 p.c. increase in population and a 7 p.c. increase in the labour force. The national per capita net value of commodity output (exclusive of Newfoundland) increased from \$756 to \$999 during the period, an advance of more than 32 p.c. As wholesale prices rose by only 11 p.c. during this period, a substantial "real" gain in per capita output of goods is indicated.

Ontario has consistently been in first place among the provinces in per capita output, recording an average of \$1,222 in 1953 which was more than 22 p.c. above the national figure. Alberta, also consistently above the national figure, came second in 1953 with an average 17 p.c. higher and British Columbia, with its well diversified economy, ranked third with an average 7 p.c. higher than the national per capita output. Saskatchewan's average fluctuates widely with the size of the crop return and in 1953 was 3 p.c. above the national average after having been 19 p.c. higher in 1952. Quebec's per capita production averaged 10 to 13 p.c. below the Canadian figure in the 1949-53 period and Manitoba's

was also consistently lower, standing 29 p.c. under the national average in 1953. The Maritime Provinces have always been far below the Canadian average in per capita output, being less than 50 p.c. of it in 1953.

6.—Per Capita Net Value of Production with Percentage Variation from the National Average by Province 1949-53

Province	1949		1950		1951		1952		1953

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—The Government in Relation to Labour

Subsection 1.—Federal Labour Legislation

The Federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

The statutory duty of disseminating information concerning labour and industrial matters is now set out in the Labour Department Act passed in 1909. In addition the Minister is responsible for the administration of the following statutes: Conciliation and Labour Act (1906); Government Annuities Act (1908)†; Government Employees Compensation Act (1918); Fair Wages and Hours of Labour Act (1935); Unemployment Insurance Act (1940); Vocational Training Co-ordination Act (1942); Reinstatement in Civil Employment Act (1946); Merchant Seamen Compensation Act (1946); Industrial Relations and Disputes Investigation Act (1948); and Canada Fair Employment Practices Act (1953). (See also p. 122).

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction

* Except as otherwise noted, this Chapter has been revised under the direction of A. H. Brown, Deputy Minister, Department of Labour, Ottawa.

† Statistics and details of administration under this Act are given at pp. 281-283.

contracts are limited to eight per day and 44 per week, except in an emergency or in exceptional circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

*Government Prevailing Rate Employees.**—Twenty-six departments and agencies of Government together employ approximately 38,000 (50,000 in summer) non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and Government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the employment area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour and wage research conducted by the Economics and Research Branch as well as from collective agreements and information supplied by some provincial Departments of Labour.

The Fair Wages Section of the Industrial Relations Branch also recommends rates of pay for 3,700 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing the hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc. for (1) prevailing rate workers generally employed; (2) ships' officers, and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948 revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards

* Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given on pp. 123-132.

in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions which must be observed prior to strike and lockout action are provided for in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, the Canada Labour Relations Board has received 522 applications for certification since Sept. 1, 1948, 317 of which have been granted, 110 rejected, 81 withdrawn and 14 were pending at Mar. 31, 1955. Of the 317 industrial disputes dealt with under the conciliation provisions of the Act, 259 were settled by conciliation officers and conciliation boards, 25 were not settled, 9 lapsed and 24 were pending at Mar. 31, 1955.

Labour-Management Co-operation Service.—During World War II production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management production committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a section of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to approximately 1,100. Their activities are directed towards such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping, and reduction of absenteeism.

Reinstatement in Civil Employment Act.—This Act, which provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons, was passed in 1946 and is administered by the Department of Labour. In 1954, by the Veterans Benefit Act, the Act was made applicable to certain ex-members of the Special Force and to former members of the regular Forces who have served for a period not exceeding three years since July 5, 1950 and prior to July 1 1955.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin, whether practised by employers or trade unions. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see p. 725).

This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies which practise discrimination; and of advertisements or inquiries in connection with employment which express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Subsection 2.—Provincial Labour Legislation

Labour legislation in Canada is mainly a matter for the provincial legislatures as it usually deals with the contract of service between employer and employee, the contract between members of a trade union which forms the basis of the union, or regulates conditions in local workplaces. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the provincial legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province a Department of Labour (in Alberta, the Department of Industries and Labour) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of work of women and young persons and provide for safety and health. Most provinces have minimum wage legislation and maximum hours laws, legislation to ensure freedom of association, to promote collective bargaining and to provide for the settlement of industrial disputes, and legislation dealing with apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan, the Labour Act of Alberta and the Fair Wage Act of Manitoba enable the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned. The Quebec Collective Agreement Act permits collective agreements between employers and trade unions to be made binding on all in the industry. The workmen's compensation laws in each province are administered by a board appointed by the Lieutenant-Governor in Council.

Provincial labour legislation enacted in 1955 is outlined in the following paragraphs:—

Newfoundland.—Because of a shortage of qualified stationary engineers, the *Boiler and Pressure Vessel Act* was amended to permit persons undergoing training approved by the Apprenticeship Board to act as shift engineers.

An amendment to the *Apprenticeship Act* permits an apprentice to be indentured to a trade union or an employers' association as well as to an individual employer.

Prince Edward Island.—The *Workmen's Compensation Act* was amended by increasing the amount allowed for funeral expenses from \$150 to \$200 and by raising the allowance to each child under 16 from \$12.50 to \$15 a week.

Provision was made for the setting up of a Department of Labour and a Minister of Labour was named.

Nova Scotia.—A *Fair Employment Practices Act* was passed, effective Jan. 1, 1956, forbidding discrimination by employers with regard to employment and by trade unions with regard to membership on grounds of race, national origin, colour or religion. Application forms, advertisements and written and oral inquiries in connection with employment which express any limitation or preference as to race, national origin, colour or religion are prohibited. The Act does not apply to non-profit organizations, nor to employers with fewer than five employees. An individual claiming to be aggrieved may make a complaint in writing to a designated officer of the Department of Labour, who will inquire into the matter and try to effect a settlement. If he is unsuccessful the Minister of Labour may appoint a Commission of Inquiry known as an Employment Practices Commission to investigate and make recommendations. The Minister may issue an order requiring the Commission's recommendations which may include reinstatement, with or without compensation for loss of employment, to be carried out. Failure to comply with the order is an offence punishable by a fine on summary conviction.

Amendments to the *Coal Mines Regulation Act* set out more detailed requirements with respect to mine rescue corps and apparatus. Members of mine rescue teams must undergo an annual medical examination. Stricter rules for safety lamps are also prescribed.

New Brunswick.—By an amendment to the *Trades Examination Act*, plumbing and pipe fitting are added to the trades for which Boards of Examiners may be appointed for the examination and certification of tradesmen who wish to qualify for journeyman status. Under a new *Plumbing Trade Act*, proclaimed in force Oct. 15, 1955, regulations governing plumbing installations may be made and applied to specific areas. These regulations may provide that only workmen who hold certificates may engage in the plumbing trade in those areas.

Effective Jan. 1, 1956 the compensation rate under the *Workmen's Compensation Act* is raised from 66 $\frac{2}{3}$ p.c. to 70 p.c. of average annual earnings. Coverage is extended to persons employed by school boards or vocational committees as home economics teachers, industrial teachers, shop teachers, maintenance employees, caretakers and bus operators.

An Act was passed to provide assistance to workmen who contracted silicosis during employment in New Brunswick prior to June 1, 1948, when silicosis was designated as an industrial disease under the *Workmen's Compensation Act*.

Quebec.—The *Workmen's Compensation Act* was amended by increasing the monthly pension to a widow from \$45 to \$55 and the special lump sum payable following the death of her husband from \$100 to \$200, by raising the allowance for each child under 18 years of age from \$10 to \$20 and by increasing the amount allowed for funeral expenses from \$175 to \$200.

Ontario.—The *Trench Excavators' Protection Act* passed in 1954 is declared not to apply to the excavation of a trench for a pipeline if the work is done mechanically. Work may be begun on an excavation in order to make repairs or to prevent injury to persons or damage to property without giving prior notice to the municipal inspector, provided that notice is given as soon as practicable. The Sections governing shoring and timbering are amended to relax the requirements to some extent where it is considered that safety is not endangered. At no time may a person be allowed to work alone in a trench more than 20 feet deep unless another person is on duty outside the trench and near at hand.

The Section of the *Fire Departments Act* which governs collective bargaining and arbitration of disputes between a municipal council and a bargaining committee of the full time fire-fighters is amended to provide for the appointment of a single arbitrator to render a binding decision concerning a dispute arising out of the terms of a collective agreement or an arbitration award or concerning an allegation that the agreement or award has been violated. If the parties cannot agree upon an arbitrator within ten days the Attorney-General is to name one.

Manitoba.—The *Fire Departments Arbitration Act* which provides for arbitration of disputes between a certified union of municipal firemen and a municipality was amended to require bargaining to take place in the autumn of the year and to set time limits on the arbitration procedure.

The *Workmen's Compensation Act* was amended to raise to the current level the monthly compensation payable to children receiving compensation according to previous scales.

Saskatchewan.—In the revision of the *Workmen's Compensation Act* the allowance to a widow is raised from \$60 to \$75 a month and the orphan's allowance from \$30 to \$35. The increases apply to all widows and children receiving compensation. The limit of \$100 formerly placed on the amount allowed for transporting a workman's body for burial, where death occurs away from his place of residence, is removed. A higher minimum is fixed for total disability; for permanent total disability the amount is increased from \$20 to \$25 a week and for temporary total disability from \$15 to \$25 a week or average earnings if they are less than that amount.

The *Trade Union Act* was amended to give the Labour Relations Board authority to vary the expiry dates of collective agreements under certain circumstances.

Amendments to the *Minimum Wage Act* and the *Annual Holidays Act* lay down new requirements with respect to an employee who has been given notice of termination of employment. For the period of notice the employee must be paid the sum which he earned during that week or a week's normal wages exclusive of overtime, whichever is greater. Pay in lieu of notice is to be a sum equivalent to normal wages. An employee may not be required or permitted to take his annual holiday during the notice period and payment of holiday pay is not to be deemed wages in lieu of notice.

The *Wages Recovery Act* was amended to provide for the collection of unpaid wages by the Department of Labour on behalf of an employee without recourse to court action. When an inspector of the Department finds wages owing to an employee an information will not be laid if the employer pays the required amount to the Deputy Minister for transmittal to the employee within two days.

Alberta.—A new *Boilers and Pressure Vessels Act* provides that a steam plant carrying a working pressure of 20 lb. p.s.i. or more must be operated under the general supervision of a person holding a valid certificate qualifying him to act as chief steam engineer of the plant and must be under the continuous supervision of a person holding a certificate qualifying him to act as shift engineer. Four classes of engineer certificates, a fireman certificate and a pressure vessel welder certificate are now provided for, as well as special and temporary certificates. A new feature of the Act is the provision for the appointment of a Board of Advisers consisting of five members to report to and advise the Minister of Labour regarding the formulation of regulations and the administration of the Act generally.

A new *Gas Protection Act* applies to domestic installations and equipment but not to public utilities. The actual standards to be followed are to be set out in regulations. The regulations may prescribe plans and specifications governing the design and construction of equipment, prohibit the advertising, sale and use of any specified equipment until it has been inspected and approved, and indicate the precautions to be taken in the sale of such equipment.

A new *Coal Mines Regulation Act* replaces an Act of 1945 and revises the safety measures of the Act in accordance with mining practices.

British Columbia.—The *Apprenticeship and Tradesmen's Qualification Act*, which replaced an Act of 1935, provides for the certification of tradesmen as well as the training of apprentices.

Employment of persons under 21 years of age in a designated trade is prohibited except under contract of apprenticeship (for which the minimum age is 15 years) or written permit from the Minister of Labour. The Act makes the customary provision for a provincial apprenticeship committee to advise the Minister and for supervision of the apprenticeship system by a director of apprenticeship. The director may, on the written application of an employer and prospective apprentice, approve and register an apprenticeship contract in a trade other than a designated trade.

The trades in which certification may be obtained will be designated by the Lieutenant-Governor in Council. Examining boards are to be appointed to conduct examinations, subject to the standards of proficiency and procedures laid down by regulations. To obtain a certificate of proficiency a tradesman must be able to qualify in examination and to submit proof of having completed the requisite period of practical training.

The *Boilers and Pressure-Vessel Act* was amended to bring refrigeration plants within the scope of the Act. It is now provided that the inspection certificate or interim certificate will serve as registration. A new provision for an interim certificate permits the operation of a boiler until an inspection can be made. The Chief Inspector was given authority to require the owner or operator to provide safety appliances or to make any repairs, modifications or additions which he considers necessary in the interests of safety. Before repairs are undertaken the approval of an inspector must be obtained and the boiler or pressure-vessel may not again be put into operation until the inspector is satisfied that it may be operated safely.

Amendments to the *Workmen's Compensation Act* increased from \$20 to \$25 the allowance payable to each child under age 16 and continued to age 18 if the child is regularly attending school. The increase is applicable to all children receiving compensation regardless of the date of accident. The amount fixed as the minimum payment for total disability was raised from \$15 to \$25 a week or to the amount of earnings, if less than \$25 a week.

Regulation of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Collective Agreement Act.—The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Labour Act of Alberta provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In *Nova Scotia* 12 schedules of hours and wages for individual building trades were in force in 1954, all renewals of previous schedules. In *New Brunswick* five schedules for individual building trades were in force in 1954. One new schedule governing carpenters at Edmundston was made binding for the first time and the schedule governing plumbers at Saint John expired in 1953.

In *Quebec*, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions, established by a collective agreement voluntarily entered into by employers and unions or groups of employees, may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1954, 96 agreements covering 225,681 workers and 21,636 employers had been generalized to apply either throughout the Province or to a certain district. The agreements in force throughout the Province apply to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, ladies' handbags, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry, the elevator construction industry and the structural iron erection industry. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in large urban centres and many rural districts.

In *Ontario* there were 147 wages and hours schedules in force at Mar. 31, 1954. Throughout the Province schedules were in effect for brewery workers, cloakmakers, the men's and boys' clothing industry, men's and boys' hats and caps, the millinery industry and the hard furniture industry. In the construction industry one schedule covered several building trades in one city and 67 schedules, each for a single trade in a single locality, covered one or more trades in 31 localities. In other industries also schedules were in effect only for certain zones. Bakers, soft furniture manufacturing, coal hoisting, and the coal industry each had schedules in one zone, retail gasoline service in four, taxi drivers in one, and barbers had schedules in 64 zones. During 1954, 11 new schedules were made binding, 10 of which applied to the construction industry including one made binding for the first time, and one to the men's and boys' hat and cap industry.

In *Manitoba* the Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hairdressing trades.

In *Saskatchewan* 17 schedules were in effect at Mar. 31, 1954. The schedule for barbers covered the whole Province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, shoe repairers and beauty culture operators in one or more areas.

In *Alberta* 28 schedules were in effect during 1954. These governed, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service station workers, radio service, laundry and dry cleaning employees and barbers. One new schedule was made binding and one was rescinded during the year.

Regulation of Hours and Annual Holidays.—Five provinces—Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is in addition an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described on p. 730 under the Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec the limits imposed by the factories Acts apply only to women and boys under 18 years of age. Several minimum wage Acts give authority for the regulation of hours as well as wages.

In Ontario there is a maximum eight hour day and 48 hour week with certain exceptions. In Alberta the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the Province they are eight and 48. In British Columbia hours are limited to eight in a day and 44 in a week. In these three Provinces the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan the Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly and applies to workers in all industries except agriculture and domestic service. A Manitoba Act covering most industrial workers in the Province requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Six provinces—Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have legislation in effect providing for annual holidays with pay for workers in most industries and New Brunswick has legislation requiring annual holidays in the mining and construction industries. In all these provinces except Saskatchewan, workers are entitled to a week's holiday with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment, in Alberta after two years and in Manitoba after three. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to one day's holiday with pay for every 20 days worked in a month but not more than two weeks' holiday in a year.

Farm workers are excluded from the holiday provisions in all provinces and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act excludes independent contractors and railway and express companies under federal jurisdiction. In addition Quebec exempts forest operations workers, public corporation employees, salesmen, janitors and watchmen, and certain part time workers. Ontario exempts professional workers, salesmen, and funeral directors and embalmers. Manitoba and Saskatchewan exempt ranch and market garden employees, and British Columbia exempts professional workers and horticultural workers.

Minimum Wage Regulations.—In Nova Scotia the minimum wage law applies only to women; in Ontario, though the Act applies to both sexes, Orders apply only to women. In Newfoundland, New Brunswick, Manitoba, Alberta and British Columbia there are separate Orders for men and women but in British Columbia many Orders cover both sexes. In Quebec and Saskatchewan all Orders apply to both sexes.

Table 1 shows the minimum rates in effect in July 1955 for several classes of establishments in the principal cities. In Newfoundland, New Brunswick, British Columbia and, with respect to men in Manitoba, the rates set are for the entire Province. Elsewhere rates vary according to zone. The rates given apply to the hours specified or to the normal work week of the establishment, if less, except at Montreal and Winnipeg.

¹ Rates apply to 48 or 54 hours in factories; 48 hours in offices; 54 hours in laundries, shops, beauty parlours and theatres; 60 hours in hotels. ² Applies only to canning or processing of fish, vegetables or fruit. ³ Cents per hour. ⁴ Cooks, 58 cents; bell boys, 30 cents.

Section 2.—The Labour Force*

During World War II up to date information on the size and characteristics of the labour supply was a necessity and to meet the possibility of disturbed economic conditions in the postwar period a current and periodic analysis of the state of employment in Canada was organized. A labour force survey, on a sample basis, was conducted in the autumn of 1945 and quarterly surveys were carried on until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers about 30,000 households in over 115 different areas of Canada, which include 34 cities having a population of 30,000 or over in 1951 in addition to some smaller urban and various rural areas. The estimates of the labour force are restricted to the civilian labour force; net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity, during the week that precedes the beginning of the survey, and who had jobs or were seeking work during the survey week. These divisions of the labour force are defined as follows:—

- (1) **Persons with jobs.**—This category comprises: (a) *persons at work*—those who did any work for pay or profit or who did unpaid work which contributed to the running of a farm or business operated by a relative; and (b) *persons with jobs but not at work*—those who had jobs but did not work because of illness, bad weather, vacation, industrial dispute or temporary layoff with definite instructions to return to work within 30 days of the time of being laid off. Persons who worked part of the survey week and also looked for work are classed as "persons with jobs".

* Details of the labour force, as defined in the 1951 Census, relative to age, sex and occupation groups are given in the 1954 Year Book, pp. 692-704.

- (2) **Persons without jobs and seeking work.**—This classification includes those persons who were looking for work during the survey week and did not work. Persons who were temporarily away from their jobs during the whole of the survey week seeking other work were considered as without jobs and were included in this category. In addition to those who were actively looking for work, this classification includes persons who would have looked for work, except that they were temporarily ill, were on indefinite or prolonged layoff, or believed that no work was available.

Information relating to the population 14 years of age or over not in the labour force is also collected. Persons not in the labour force include such groups as those going to school or keeping house in their own homes, persons who are permanently unable to work because of old age or other reason, and persons who are retired or voluntarily idle. Persons such as housewives, students and others who worked part time are classed as "persons with jobs" or, if looking for work, they are classed as "persons without jobs and seeking work".

The estimates derived from the labour force surveys are subject to sampling error. In general the percentage error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than that shown below.

<i>Size of Estimate</i>	<i>Sampling Variability</i>
50,000.....	8,000
100,000.....	11,000
500,000.....	25,000
1,000,000.....	33,000
5,000,000.....	54,000

Data in Table 2 for June 1, 1946 to 1955 are compiled from labour force surveys conducted in late May or early June of those years. The information for years before 1946 is taken from estimates based upon 1931 and 1941 Census material rearranged according to the definitional system used in the labour force surveys, the revised census data being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment figures.

¹ Exclusive of persons in institutions and Indians on reserves.
family workers.

² Revised since publication of the 1955 Year Book.

³ Employers, 'own-account' and unpaid
⁴ Newfoundland included from 1950.

Main Characteristics of the Canadian Labour Force 1931-55.*—The civilian population 14 years of age or over (exclusive of persons in institutions and Indians on reserves) increased in the period June 1931 to June 1955 by about 3,216,000 or at a rate of about 134,000 persons a year. The strength of the Armed Services rose very considerably from 5,000 in 1931 and 9,000 in mid-1939 to 779,000 at June 1944 and stood at 117,000 in June 1955. Consequently the civilian population (exclusive of persons in institutions and Indians on reserves) which increased very little from June 1939 to June 1940, declined in size until, in mid-1943, there were 238,000 fewer persons than in 1939. From June 1943 to June 1944 there was a small increase in the civilian population (59,000) as the rate of increase of the Armed Forces levelled off but from 1945 to 1947 the civilian population increased markedly as a consequence of the rapid demobilization of the Forces.

In contrast the civilian labour force maintained its strength notwithstanding large withdrawals to the Forces during the war years. The labour force of June 1942 was 102,000 greater than at June 1941 and that of June 1945 was 66,000 greater owing mainly to replacements from among those who would normally be outside the labour force. The group classed as "not in the labour force" usually represents a fairly constant percentage of the population but during the war years this category reached a low point in 1943 (162,000 persons fewer than the total of 3,437,000 in 1939), increased by 74,000 between mid-1943 and mid-1944 and then moved sharply upward with the decline in wartime employment—by 160,000 from June 1944 to June 1945, and by 355,000 from June 1945 to June 1946.

The number of civilian jobs increased considerably during the War as compared with prewar experience, despite a decline in agricultural employment, and reached a peak of 4,447,000 in June 1943 (372,000 greater than in June 1939). After registering a decline to 4,411,000 during the readjustment period represented by June 1945, the number of jobs continued to increase in postwar years to 5,228,000 in June 1955.

Section 3.—Employment, Payrolls and Hours†

Subsection 1.—Employment and Payrolls by Industrial Divisions

For many years the Dominion Bureau of Statistics has made monthly surveys of employment in the major non-agricultural industries—except for education, health, domestic and personal service, government administration, etc. Statistics are published each month‡ for the following broad industrial divisions and their components: forestry, mining, manufacturing, construction, transportation, storage and communications, public utilities, trade, finance and real estate, and certain services (hotels, restaurants, laundries and dry cleaning plants, etc.). Since 1941 the monthly inquiries have covered the current earnings of those in recorded employment and later a record of weekly payrolls and average weekly earnings was built up on an annual basis for 1939, 1940 and 1941. Since 1944 monthly data on man-hours and hourly earnings have been collected and published. Statistics of the numbers of females employed by the reporting industries have been collected monthly since 1946, replacing the annual and semi-annual surveys which had been conducted since 1942. Following the entry of Newfoundland into Confederation in 1949 the surveys were extended to that Province and separate figures were published from 1950 to 1953. Since then statistics for all ten provinces have been published with 1949 as the base year. In 1953 a special bulletin§ was issued giving historical series (calculated on the 1949 base) for the major industrial groups and geographic regions from 1921 on, and giving detailed information from 1947 on.

Inquiries are limited to establishments usually employing 15 or more persons so that there are variations in the degree to which the surveys cover total employment in different groups. The industrial divisions covered most completely are mining and manufacturing in which 96 p.c. and 89 p.c. respectively of all employment is recorded; the lowest coverage, because of the smaller size of many units, is in services where about 42 p.c. of total employment

* Newfoundland data are available since 1950, but for reasons of comparability with earlier years figures for this Province have been omitted from this analysis.

† Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

‡ DBS Bulletin *Employment and Payrolls*; methods used in preparing current statistics are described therein.

§ DBS Bulletin *Employment, Payrolls and Weekly Earnings, January 1949–June 1953, with Historical Series*.

EMPLOYMENT, PAYROLLS AND AVERAGE WEEKLY EARNINGS 1941-55 (COMPOSITES OF NINE NON-AGRICULTURAL INDUSTRIES)

1949 = 100

in the groups surveyed is in the reporting establishments. There is less variation in the degree to which the provinces are covered but there are some differences partly because of the greater prevalence of small units in some areas. Another factor is the inability of certain large companies to provide an exact distribution of their employees along provincial lines, a fact that tends to exaggerate the apparent coverage in some provinces usually at the expense of the less highly industrialized areas. The province with the highest proportion of employment in reporting establishments is Ontario with 84 p.c. in the industrial groups for which statistics are collected. The lowest coverage, apart from Prince Edward Island which is predominantly agricultural, is in New Brunswick with 67 p.c. The proportion for the ten provinces is 78 p.c.

The postwar period was marked by a rising level of employment in almost all sectors of the economy, an advance which, apart from a few short-run setbacks, was not checked until the last quarter of 1953. Thus 1954 was the first year since 1916 in which industrial employment generally was lower than in the preceding year. The corresponding index figure for payrolls was only slightly below the 1953 level as the decline in employment was almost offset by a continued rise in salary and wage rates.

Although the 1954 index of employment (1949=100) was lower at 109.9 than the 1954 or 1952 indexes of 113.4 and 111.6 respectively, the fall-off did not reflect lessened activity in all sectors of the economy; some industrial divisions showed marked losses in employment and others reported improvement. There were moreover substantial variations in the movements of components of the major industrial divisions. Employment rose in public utility operations, trade, services and in finance, insurance and real estate, but expansion in these divisions was outweighed by curtailment in manufacturing as a whole, construction and transportation, storage and communication. The most marked declines among non-durable manufactures were in the textile products group which, continuing its downward trend of the past few years, reached a figure 20 points below that for 1949, and the clothing group which fell from 101.7 in 1953 to 91.9 in 1954. Among the durables there was a severe contraction in iron and steel products which fell from 111.8 in 1953 to 100.5 in 1954 and in transportation equipment which dropped to 136.2 from 153.0 in 1953. Industrial disputes seriously affected both groups, all subdivisions of which showed lower employment levels. Transportation equipment was also affected by other factors including the levelling off in the defence program, a temporary slump in automobile sales, and decreased demand for railway equipment. The iron and steel group was severely affected by the decline in farm income, reflected in lower demand for agricultural implements, and by decreased demand for capital goods which particularly affected the primary iron and steel sector. Residential construction increased in 1954 but other building work fell off and construction as a whole was well below the 1953 level as a result of the completion of several large industrial and defence projects in the early part of the year.

Employment was quieter in 1954 in every province except Saskatchewan, where the general index rose slightly as a result of substantial increases in construction and trade. The greatest proportionate decrease in employment took place in Newfoundland where declines occurred in logging and construction. Quebec, Ontario and Manitoba also showed considerable reductions. The textile, clothing, wood products and iron and steel industries in Quebec reported important losses as did textiles, transportation equipment, iron and steel products and construction in Ontario and transportation equipment in Manitoba.

5.—Annual Average Index Numbers of Employment by Province 1945-54 and Monthly Indexes 1953 and 1954

NOTE.—These indexes are calculated as at the first day of the month, on the base 1949=100.

¹ Exclusive of Newfoundland prior to 1949. ² The proportion of employees reported in the provinces to the total reported by all employers making returns in Canada (12 month average).

Employment in five of the eight metropolitan areas shown in Table 6 was lower in 1954 than in the preceding year. The declines, as stated on p. 740, were mainly concentrated in iron and steel products, transportation equipment and textiles. Nearly all of the urban centres for which data are published in the monthly reports reported lower employment in 1954 than in 1953.

¹ Proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada (12 month average).

Earnings.—Payroll disbursements in the reporting establishments in 1954 were very slightly below the record figure achieved in 1953 but exceeded those in any earlier year. The decline in employment in the 12 month comparison was almost offset by continued increases in wage and salary rates.

Aggregate wages and salaries were lower in 1954 than in 1953 in those areas where the decline in the level of employment was most marked. Noteworthy losses occurred in construction (6.2 p.c.) and durable goods manufacturing (4.5 p.c.). The reduction in manufacturing as a whole was 1.6 p.c., the trend in establishments producing non-durable goods having been moderately upward. Payrolls were also higher in public utility operations, trade, finance, insurance and real estate and in the service group.

Most of the provinces recorded slight declines in earnings; the greatest were in Newfoundland and Prince Edward Island but Nova Scotia, New Brunswick, Ontario and British Columbia were also lower than in 1953. The most substantial increase was in Saskatchewan, with Alberta and Manitoba next in line.

The over-all average weekly wages and salaries in the establishments covered rose from \$57.30 in 1953 to \$58.88 in 1954, an alltime maximum. Higher per capita figures were recorded in all industrial divisions; the groups showing the largest increases were paper products, electrical apparatus and supplies, chemical products, public utility operations, and finance, insurance and real estate, in each of which average weekly earnings increased by more than \$2. Earnings per employee were higher in most provinces and in nearly all metropolitan areas for which data are segregated.

Man-Hours and Hourly Earnings.—A monthly series of statistics of man-hours, hourly earnings and weekly wages* has been computed since 1944 for those establishments covered by the survey which keep a record of hours worked by their wage earners. Because salaried employees are purposely excluded from the series and also because some establishments do not keep the necessary records, the coverage is lower than in the employment and payrolls inquiry. Monthly data are obtained for over 80 p.c. of the total production workers reporting to the annual Census of Industry and Merchandising which surveys practically all establishments, irrespective of size.

Average hours worked per week by factory wage earners have fallen steadily since the end of the War and showed a further slight decrease in 1954. In some factories the lower figure may be related to a decline in industrial activity resulting in less overtime work and some short time. However average hours were also lower in groups, such as paper products and chemical products, where activity increased during the year, largely because of a reduction in standard hours per week. The only significant advances from 1953 in average hours worked per week were recorded in coal mining and printing, publishing and allied industries.

* DBS Bulletin *Man-Hours and Hourly Earnings with Average Weekly Wages*.

The average hourly earnings of wage earners reported in manufacturing rose from \$1.36 in 1953 to \$1.41 in 1954, the largest increases being in paper products, printing, non-ferrous metal, chemical and petroleum and coal products. The trend in the non-manufacturing divisions for which data are available was also upward; the only group showing a decrease was coal mining which dropped from \$1.50 in 1953 to \$1.48 in 1954 as a result of the employment of relatively more miners in 1954 in areas where average earnings were below the industry average for Canada.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

Subsection 2.—Earnings and Hours of Work of Male and Female Employees in Manufacturing Establishments*

A survey of earnings and hours of men and women wage earners and salaried employees in manufacturing establishments usually employing 15 or more persons is made for the last week of October each year. In addition to the general figures of earnings and hours, more detailed data are obtained in a three year cycle. In 1954 information for office, clerical and related employees was segregated from that for managerial, professional and other salaried employees; in 1953 a distribution of wage earners and salaried employees by amounts

* More detailed information is given in DBS Annual Bulletin *Earnings and Hours in Manufacturing*.

earned in the week surveyed was obtained; and in 1952 wage earners were reported in a given range of hours per week. The annual survey supplements the data obtained in the monthly series on employment, payrolls and man-hours in the same manufacturing establishments and covers almost 90 p.c. of all employees in the industry as reported in the annual Census of Industry and Merchandising.

The co-operating establishments are asked to report for all full time, casual and part time employees paid for the week ending Oct. 31, except homeworkers and persons absent without pay throughout the week. Proprietors, firm members, pensioners and staffs in separately organized sales offices are excluded. The gross earnings, including regularly paid bonuses, overtime and vacation pay for the week, are reported before deduction for taxes, unemployment insurance, pension contributions, etc. The hours include part time, full time and overtime hours worked and hours of paid absence in the reported week.

The upward movement in average earnings, typical of the postwar period, continued in 1954 although the increases were below the average of recently preceding years. In the five years 1950 to 1954 the averages of weekly wages and salaries rose by 26.2 p.c. and 32.5 p.c., respectively. Continuing small declines in the hours of the wage earners resulted in greater proportional increases in their hourly than in their weekly earnings. Table 10 gives the amounts and proportions of the changes in the general figures in the five years.

Table 11 shows the geographical and industrial averages for male and female wage earners and salaried employees for the week ended Oct. 31, 1954 and Table 12 the averages of weekly earnings of general office and clerical employees for the same week.

Industrial and geographical variations in working time as well as year to year changes, as shown in these tables, result from a variety of causes—variation in the length of the standard work week; the numbers of casual and part time workers employed and their hours in the reported week; amounts of overtime worked, and of time lost through absenteeism, labour turnover, industrial disputes, layoffs, etc.; differing occupational requirements and varying proportions of men and women. Women generally average substantially shorter time than men. Their standard work week tends to be lower, as relatively small proportions of women are employed in industries where the work week is above average, and they show a higher frequency of part time work and of absenteeism.

Levels of average earnings are related to the distributions of employees in industries or areas where pay rates are above or below average. They also reflect differences in basic pay rates, in occupational skills, in amounts of bonus, commission and overtime payments, variations in levels of activity in component groups and in particular establishments, and other factors. The averages of salaried personnel are further affected by the incidence of head offices, the type and size of establishments, and varying requirements for highly paid professional and executive personnel, most of whom are men. Women's earnings generally average well below those of men in the same industries, chiefly as a result of pay differentials, occupational variations, a greater incidence of part time work and absenteeism among women, and their higher proportions of younger and less experienced workers. The proportions of women reported in the 1953 and 1954 surveys and the relationship of their earnings to men's earnings are given in Table 13, p. 750.

¹ Includes Prince Edward Island and the Territories.

Data required for the tabulation of the provincial distribution of male and female wage earners and salary earners, classified by earnings group, are secured every third year. The latest figures available (1953 as compared with 1950) are given in the 1955 Year Book at pp. 790-791.

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates and standard hours of labour are compiled by the Federal Department of Labour and published in the *Labour Gazette* (official monthly journal of the Department) and in the annual report *Wage Rates and Hours of Labour in Canada*.

The wage data shown in this Section are different in a number of ways from that contained in previous editions of the Year Book. The number of industries for which indexes are given has been increased and the classification of industries has been brought into closer conformity with the Standard Industrial Classification used by most Government Departments. The base year of the wage rate index has been changed from 1939 to 1949.

The statistics on wage rates apply to the last normal pay period preceding Oct. 1, 1954 and cover some 15,000 establishments. The term "wage rate" is defined as the weighted average of rates paid to either time or incentive workers or both in a given occupation. The averages refer to straight-time earnings only, overtime earnings being excluded. The industry index numbers measure changes in wage rates for non-office employees below the first level of supervision. However they do not provide a basis for comparing the level of wages in one industry with those in another. More detailed information on concepts and methods is given in Department of Labour Annual Report No. 36, *Wage Rates and Hours of Labour in Canada*.

14.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups 1945-54

(1949=100)

NOTE.—Indexes for the years prior to 1949 are conversions of the previous series on the 1939 base. Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates and Hours of Labour in Canada, 1955*.

Wages of Farm Labour.—Farm wages have been increasing steadily during the past few years. In 1952 they were, almost without exception, up from the level of 1951 and the trend continued in 1953. In 1954 however the rates showed a general levelling off or a slight decline in most of the provinces.

The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland.

21.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1951-54

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

SEASONAL UNEMPLOYMENT IN CANADA*

The Canadian economy has long been plagued by the problem of seasonal unemployment, a problem which has recently been receiving serious and increasing attention from governments, industry and labour. Basically, seasonal unemployment in Canada is caused by the climatic conditions of the country though its extent is accentuated by habits of employers and consumers that have become part of the production and marketing picture. Thus it is a natural result of a natural condition which cannot be changed or eradicated but must be dealt with by a concerted effort to devise ways and means of alleviating its effects on both the industries concerned and the workers laid off.

There are of course other types of unemployment. Mass unemployment, such as occurred in the 1930's, may result directly from a lowering of the general level of economic activity in the country. On the other hand there are always people changing jobs and the brief periods of idleness usually involved in such changes are termed "frictional unemployment". The distinguishing mark of seasonal unemployment is its regular recurrence. In Canada many businesses reduce their activities in the winter months or close down altogether because of the cold weather, the ice and the snow. As a result unemployment, usually at a minimum in September, rises sharply to a peak during the winter. For example during the winter of 1954-55 the number of persons without jobs and seeking work reached a peak of 401,000 at Mar. 1 but by July 1 the total had dropped to 150,000. This pattern is repeated to varying degrees each year, as is shown in the Chart opposite.

The extent of seasonal unemployment is, in part, dependent upon the general level of economic activity. During World War II when there was a shortage of manpower the volume of seasonal unemployment was small but, as demand pressures on the economy gradually eased, that volume increased steadily. Also the number of persons employed in the country's seasonal industries has grown year by year in the postwar period so that seasonal unemployment has become a progressively more serious social problem in Canada. This is pointedly illustrated by the fact that there was a significant increase in the volume of seasonal unemployment during the winters of 1953-54 and 1954-55 when the general level of economic activity moderated. It should be remembered moreover that seasonal unemployment, like other types of unemployment, may set up a chain reaction and create still more unemployment. Unemployed persons tend to restrict their consumption which in turn restricts sales and finally affects production and employment.

TYPES AND EFFECTS OF SEASONAL UNEMPLOYMENT

There are two definite types of seasonal unemployment, both of which stem from weather conditions. The most readily recognized type results from the direct effects of climate on the production process. It is obvious that it is either impossible or very difficult to conduct certain production operations in certain seasons. Canadian farmers for instance cannot with the best will in the world plant wheat in February. Ice makes inland navigation impracticable in winter and cold weather causes difficulty for the salt water fisherman. The canning industry must obviously operate largely in the summer and autumn when fruits and vegetables are harvested. On the other hand logging in eastern Canada is an autumn and winter industry since the frost and snow makes transportation in the woods easier and the spring thaw is depended upon to provide high water for the log drives.

The other type of seasonal unemployment occurs in industries in which marketing rather than production is affected by the climate or by the time of year. Because of the buying habits of Canadian consumers retail trade reaches its annual peak from October

* Prepared in the Manpower Analysis Division, Economics and Research Branch, Department of Labour, Ottawa.

UNEMPLOYMENT IN CANADA 1946-55

to December. The clothing industry, strongly influenced by fashion and seasonal requirements, has high points in the spring and the autumn; the demand for agricultural implements is highest in spring and summer.

The total adverse effect of regularly recurring temporary unemployment is impossible to assess. The most serious factor is the waste of manpower involved. Man-hours not used can never be regained. It is estimated that there are 250,000 Canadians seasonally unemployed each winter even in years of generally high employment, but if the economy slows a little the number increases and the loss in man-hours and wages is that much greater.

Another factor to consider is the annual cost of maintaining seasonally unemployed workers. Employers and employees jointly bear most of the cost of unemployment insurance benefits, both regular and supplementary; the Government contributes one-fifth of their total contribution and bears the administrative costs. During the period January to April 1955 the Unemployment Insurance Commission paid out more than \$142,000,000 in unemployment insurance benefits, of which about \$29,000,000 were supplementary payments. Supplementary benefits are paid to certain classes whose benefits have been exhausted or who are not entitled to ordinary benefit during the period Jan. 1 to Apr. 15 each year.

The cost of maintaining those seasonally unemployed not covered by unemployment insurance or supplementary payments falls on public relief funds, charitable organizations, churches and private persons. In addition to such direct assistance there are the intangible personal and social costs which are associated with unemployment, whatever its cause.

Of course not all workers holding seasonal jobs are unemployed for an extended period. This becomes clear when the different groups of people engaged in seasonal work are considered. One group consists mostly of students, housewives, retired people and others who enter the labour force at peak periods but withdraw when their jobs come to an end or school reopens. Another group includes those workers who transfer from one industry to another—for example from farming to logging—as the seasons change. Some shifts are also made by workers from one area to another within the same industry. A third group includes those who work for only a part of the year but who are looking for work for the balance of the year. These are the seasonally unemployed, but they constitute only a portion of the total number of workers affected by seasonality of employment.

SEASONALITY AMONG THE INDUSTRIES

The degree of seasonality varies considerably from industry to industry. The following statement shows the amplitudes of seasonal variations for all non-agricultural industrial groups, together with the months of peak and trough employment, the approximate number of seasonal employees, and the average peak number of employees. The figures quoted are all averages for the years 1947-51. The "amplitude of seasonal employment variations" is defined as the average difference between peak and trough employment when both are expressed as percentages of average employment. The greater the amplitude, the greater the proportion of seasonal employees. Because the data are derived from establishments usually employing 15 or more persons and small firms are omitted, the figures for seasonal employees and average employment are on the conservative side.

AMPLITUDE OF SEASONAL EMPLOYMENT VARIATIONS, MONTHS OF PEAK AND TROUGH EMPLOYMENT, NUMBER OF SEASONAL EMPLOYEES, AND AVERAGE PEAK EMPLOYMENT FOR NON-AGRICULTURAL INDUSTRIAL GROUPS

(All figures are averages for the years 1947-51.)

¹ These figures cannot be interpreted as the number of persons who are likely to be seasonally unemployed at any particular time because not all seasonal employees want year-round jobs and some may transfer from one industry to another (see text on p. 760).

² This figure is not the sum of the figures for component groups because peak employment does not occur at the same time for all groups.

³ The seasonal pattern in this industry is too erratic to establish a definite peak or trough.

The figures for standard classification groups given in the statement do not of course show the extent of seasonality in the individual industries included in those groups; high employment in one component industry within a group often tends to offset low employment in another component industry. The following Charts illustrate the extent to which 18 of Canada's most seasonal non-agricultural industries are subject to seasonal employment variations; the first shows the amplitude of seasonal employment variations in the different individual industries and the second shows the absolute number of seasonal employees in the same industries.

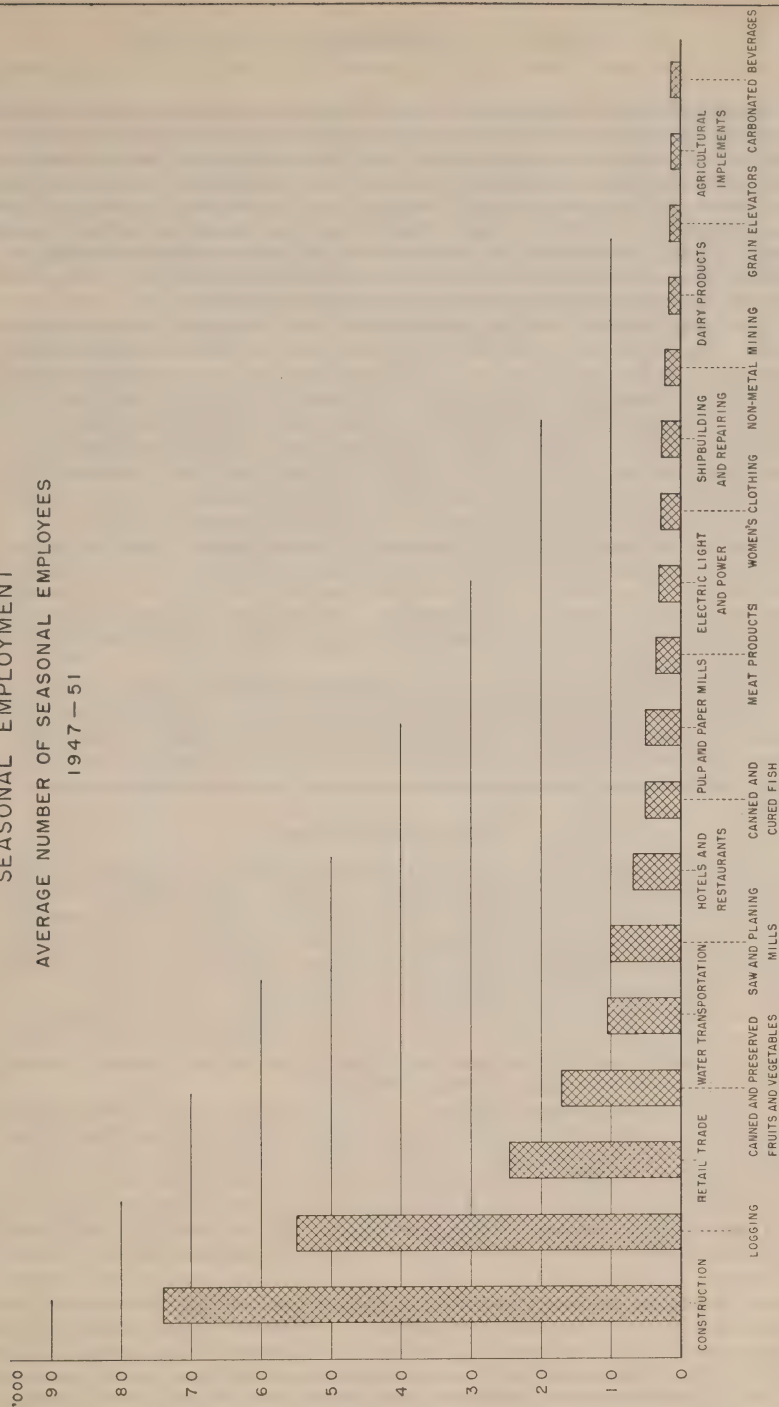

SEASONAL EMPLOYMENT AVERAGE AMPLITUDES OF SEASONAL VARIATIONS 1947-51

SEASONAL EMPLOYMENT

AVERAGE NUMBER OF SEASONAL EMPLOYEES

1947 - 51

Certain industries, although they have large seasonal variations, do not contribute proportionately to seasonal unemployment because their seasonal workers consist largely of students, housewives or other persons who do not in general want year-round jobs. Industries in this group are retail trade, hotels and restaurants, canned and preserved fruits and vegetables, some parts of non-metal mining and some parts of tobacco and tobacco products. On the other hand some industries are so strongly affected by climatic changes that they are virtually unable to conduct their normal activities during the winter months. These include water transportation, construction of highways and streets and, to a lesser extent, shipbuilding and repairing, and grain elevators.

The forest industries—logging, sawmills, and pulp and paper mills—are in a unique position. Employers very often conduct operations in two or in all three of these branches which means that at least a part of their work force can be transferred regularly from logging to mill work or vice versa. In fact seasonal employment variations in sawmills and pulp and paper mills do not present as serious an employment problem as in most other industries because many of the workers seasonally laid off are absorbed in logging in the winter months. And although logging employs a much larger seasonal labour force than sawmills and pulp and paper mills the difference is largely composed of farmers and fishermen who return to these occupations when the logging season is over.

Some industries are affected by seasonal variations in their supply of raw materials or in the demand for their products, or a combination of the two. It is in these industries in particular that constructive action to reduce seasonal variations on the part of employers, unions and consumers may be most effective. The category includes planing mills, meat and dairy products, canned and cured fish, carbonated beverages, women's clothing and agricultural implements.

The building construction industry, of special significance because it accounts for a large part of the seasonally unemployed in Canada, is one in which co-operative planning for the reduction of seasonal employment is particularly important. With regard to this industry however the public must be educated to accept the fact that construction work can be done during the winter—a season traditionally considered impracticable for such activity.

STABILIZATION MEASURES

Many effective steps may be taken to stabilize employment, particularly in the industries falling in the last two groups mentioned above. These include diversification of products, stockpiling of raw materials and finished goods, the levelling of seasonal consumer spending habits, the scheduling of repairs and alterations in the offseason, the transfer of employees between departments of the business, the training of workers for jobs that are available at different seasons and the taking of holidays in the slack season.

However the measures that may be taken to reduce seasonal employment vary considerably from industry to industry. The problem as it exists for three of Canada's most seasonal industries—water transportation, women's clothing and building construction—is examined here as an indication of that variability.

In the *water transportation industry* climatic conditions are the most important cause of seasonal unemployment but coastal navigation is much less affected than inland water transportation. On the Atlantic Coast the ports do more business when the St. Lawrence River is closed, although some do much larger coastal and overseas trade than others. On the Pacific Coast, where there is no competing inland waterway, the water transportation business is more stable. Companies operating on the Great Lakes and the St. Lawrence River however are forced to shut down for several months each year because of ice and storms. Employment in this industry also varies to some extent because of the seasonal fluctuation in demand for service, an indirect result of climatic variations. Although operations are interrupted completely during the winter in a large part of this industry, some companies try to keep part of their crews, particularly officers, busy all the year by using them to do repair and maintenance work in the slack season. A few firms encourage their men to accumulate leave credits so that this leave may be taken with pay when work is not available, thus delaying layoffs as long as possible.

The *women's clothing industry* has two seasonal cycles. Not all clothing firms have the same employment pattern but in general employment is above average in late winter and spring and again in the autumn, and below average in summer and at the end of the year. Annual changes in styles force producers to concentrate manufacturing in a short period of time and demand is affected by the switch from winter to summer garments and back again. Some firms produce only on an order basis—orders follow fashion changes and production follows orders—which results of course in seasonal variations in employment. Seasonal fluctuations in supplies of textiles also affect some women's apparel establishments, particularly dress and suit manufacturers. Materials and colours change with styles and textiles are altered accordingly, putting a premium on speed and tending to compress employment into short periods.

The steps taken to reduce seasonal unemployment in this industry are mainly designed to increase demand in the slack season. Some reductions in employment variations have been made by distributing samples earlier and by encouraging retailers to order earlier in the season. New lines and styles have been added by some firms in order to increase slack season demand and sales are 'pushed' in the offseason by others. In addition the slack season is sometimes used for training unskilled workers and a few firms produce at or near cost during the months when they would otherwise be forced to shut down. Earlier ordering by wholesale and retail buyers, greater diversification of products and the stock-piling of standard garments in the offseason would also help to reduce seasonal employment variations.

The *building construction industry* is busy from spring to late autumn with the peak coming in summer. Winter is the period of greatest unemployment, because excavating, bricklaying, roofing, steel erection and concrete pouring are made more difficult by cold, ice and snow. Another contributing cause is the seasonal fluctuation in the demand for construction work. It is largely a matter of custom to associate construction work with warmer weather even though modern materials and methods permit winter work.

Many techniques are now being used to reduce seasonal unemployment in this industry. The most common is to plan early operations so as to get the building closed in by winter and then, with the use of artificial heat and light, complete the interior during the winter. New methods, such as the use of tarpaulins and the addition of calcium chloride to concrete, and improved equipment such as heaters for sand and gravel have helped to make winter work easier. Also price adjustments have had their effect—lower markups for winter work or no increase in prices for work done in winter even though it may be more costly than work done in other seasons. Further reductions are possible if tenders are called in autumn and winter so that actual construction may begin in early spring. Attempts too are being made to analyze the extent to which construction costs are higher in winter, the specific reasons for this and the possibility of erasing the differential.

The Federal Government has been pursuing research into the problem of seasonal unemployment for some years. In 1953 a detailed study of the question was undertaken at the request of the National Advisory Council on Manpower. The National Employment Committee, through the Regional and Local Employment Committees, questioned more than 600 employers in 18 of the most seasonal industries on the causes of seasonal variations in their employment and on the methods in use or recommended to reduce such variations. An analysis of the replies was made by the Economics and Research Branch of the Department of Labour and published in 1954 in English and French in a pamphlet entitled *Seasonal Unemployment in Canada*. About 24,000 copies of this pamphlet were distributed throughout the country.

During the winter of 1954-55 an active publicity campaign was conducted through radio broadcasts, printed material and talks to employer and union groups and was participated in by 154 local employment advisory committees. Speakers for the broadcasts included the Minister of Labour, employers and industrial and labour organization leaders. Federal Government departments undertaking new construction and maintenance and repair jobs have been arranging to award the contracts for such work in the autumn and early winter

so that more employment will be provided in the winter. Wherever possible procurement of material and supplies has also been timed to provide increased work during winter. Provincial governments have taken similar measures and management, trade and union groups have co-operated in the plans to increase employment in the offseason.

Through action in these fields and through education and publicity, it is certain that governments, employers, workers and the public can contribute substantially toward reduction in the waste of human and other resources caused by seasonal unemployment as well as toward reducing the need for various kinds of assistance for laid-off workers.

Section 5.—Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons except the following: workers in specified industries or occupations such as agriculture, fishing, the Armed Forces, the permanent public service of the Federal Government, provincial governments and municipal authorities, private domestic service, private duty nursing; certain director-officers of corporations; workers on other than hourly, daily or piece rates if earning more than \$4,800 a year and (except by consent of the Unemployment Insurance Commission) technical and professional employees in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a milage rate) are insured regardless of amount of earnings, together with all employees who receive \$4,800 or less per annum under weekly, monthly or yearly rates.

Unemployment Insurance Fund.—Employers and employees contribute to the Unemployment Insurance Fund, the total paid by each group being equal. The Federal Government contributes an amount equal to one-fifth of the combined employer-employee contributions and assumes the cost of administration. From July 1, 1941 to Mar. 31, 1955 employers and employees contributed \$1,400,136,620 to the Fund and the Federal Government added \$280,033,508. Interest and profit on sale of securities amounted to \$172,090,658 and fines of \$219,248 made a total revenue of \$1,852,480,034.

Benefits first became payable on Jan. 27, 1942 and, from then to Mar. 31, 1955, total benefit payments amounted to \$1,011,787,717, leaving a balance of \$840,692,317 in the Fund. Reserves of the Fund are invested in Government of Canada bonds and, as at Mar. 31, 1955, the par value of bonds held amounted to \$840,448,000.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, EFFECTIVE OCT. 2, 1955

\$51.00 to \$56.99.....	56	56	1.12	58 to 60.....	23	30
\$57.00 or over.....	60	60	1.20			

¹ The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained. ² Unemployment insurance stamps combine both employer and employee contributions.

³ Rates calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. Since Oct. 2, 1955 a claimant to qualify for benefit must have at least 30 weekly contributions in the last 104 weeks prior to claim; 8 weeks must be in the last 52 weeks. (These periods of 104 weeks and 52 weeks may be extended under certain circumstances.) ⁴ Employees earning less than \$9 in a week receive one-half of a 32 cent stamp (8 cts. from the employer and 8 cts. from the employee).

The duration of benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 36 weeks. The rate of benefit is determined by the average of the contributions in the past 30 weeks. No benefit is payable in a benefit period until a claimant has served a waiting period equivalent to one full week's benefit.

Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Seasonal benefit is payable in the period Jan. 1 to Apr. 15 to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit.

22.—Persons Insured under the Unemployment Insurance Act by Industrial Group and Sex 1953 and 1954

NOTE.—These figures include only persons who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number, based on a 10 p.c. sample, in insurable employment as at Apr. 1.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act 1940. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941 and added offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

29.—Applications for Employment, Positions Offered and Placements Effectuated by Employment Offices 1945-54 and by Province 1952-54

Note.—Figures by provinces from 1920-51 are given in the corresponding table of previous Year Books beginning with the 1926 edition. Totals for 1920-37 are given in the 1938 edition, p. 766; for 1938 in the 1939 edition, p. 802; and for 1939-44 in the 1951 edition, p. 686.

Section 6.—Vocational Training*

The Federal Department of Labour, under the authorization of the Vocational Training Co-ordination Act 1942, co-operates with the provinces in promoting and developing vocational training in Canada by sharing with the provincial governments the costs of establishing and operating various types of schools and training programs designed to fit trainees for employment.

The federal-provincial program under which all classes and training projects are operated is known as 'Canadian Vocational Training'. In conducting this program, the Minister of Labour receives advice and co-operation from the Vocational Training Advisory Council which consists of representatives of provincial governments, employers, organized labour and other bodies concerned with vocational training in Canada. Problems regarding apprenticeship, including federal participation therein, are referred to the Apprenticeship Training Advisory Committee which reports to the Minister through the Council.

The established procedure is to have all training programs operated by or under the supervision of the appropriate provincial authority and to reimburse the provinces for provincial government expenditures in connection with such projects. Where classes or training programs are operated for Federal Government Departments, the Armed Forces, or other federal agencies, the provinces are reimbursed for the full costs. Otherwise they are reimbursed for one-half of such expenditures subject to the limitation of funds voted for such purpose by Parliament.

There are four federal-provincial agreements governing the nature and extent of the sharable expenditures for different types of training: the Vocational Schools' Assistance Agreement, the Apprenticeship Agreement, the Vocational Training Agreement, and the Vocational Correspondence Courses Agreement.

Assistance for Vocational Schools.—Ten year agreements for vocational school assistance were signed by nine provinces in 1945, by Newfoundland in 1950 and the Northwest Territories in 1954. These agreements expired on Mar. 31, 1955 but were renewed for a period of one year pending decision of the Government regarding future policy and procedure with respect to federal grants-in-aid. The original agreements provided a total of \$20,000,000 to be expended over the ten year period for operational expenses of vocational schools of less than university grade and \$10,000,000 for capital assistance in the building and equipping of such schools. Additional funds were provided for Newfoundland and the Northwest Territories. The new one year agreement provides \$2,070,000 for operational costs to be allotted to the provinces on the basis of a \$10,000 outright grant to each, the balance being divided in proportion to the population in the age group from 15 to 19 years inclusive.

Payments to the various provinces and territories during the fiscal year ended Mar. 31, 1955 were as follows:—

Province	Annual Allotment ¹	Province	Annual Allotment ¹
	\$		\$
Newfoundland.....	66,600	Saskatchewan.....	165,237
Prince Edward Island.....	25,500	Alberta.....	147,600
Nova Scotia.....	121,003	British Columbia.....	140,700
New Brunswick.....	89,800	Northwest Territories.....	3,366
Quebec.....	638,100		
Ontario.....	597,500	TOTALS.....	2,029,522
Manitoba.....	34,116		

¹ Provinces other than Newfoundland and the Northwest Territories used their full capital allotment.

Apprenticeship Training.—Apprenticeship agreements covering a ten year period commencing Apr. 1, 1944 were signed by all provinces except Quebec and Prince Edward Island. Newfoundland signed an agreement in 1950 for the remainder of the ten year

* More detailed information is given in the annual report, *Canadian Vocational Training Branch*, published as a supplement to the annual report of the Department of Labour.

period. These agreements have been renewed for a further ten year period expiring on Mar. 31, 1964. They provide for sharing, on a fifty-fifty basis, in provincial government expenditures on the training of indentured apprentices who are registered with the provincial Departments of Labour under the provisions of the apprenticeship Act of each province. Training is provided on the job and in specially organized classes which may be conducted on a full time basis during the day or as part time evening or day classes. As of Mar. 31, 1955 a total of 14,023 apprentices was registered. Federal Government expenditures for this purpose for the year ended Mar. 31, 1955 were as follows:—

<i>Province</i>	<i>Payment</i>	<i>Province</i>	<i>Payment</i>
	\$		\$
Newfoundland.....	18,281	Alberta.....	207,937
Nova Scotia.....	54,789	British Columbia.....	55,252
New Brunswick.....	44,427	Northwest Territories.....	799
Ontario.....	312,747		
Manitoba.....	67,902	TOTALS.....	839,014
Saskatchewan.....	76,880		

Vocational Training Courses.—Agreements which provide for sharing with the provinces the costs of various types of training projects, other than those regularly conducted in schools assisted under the provisions of the Vocational Schools' Assistance Agreement, have been in operation since 1939. These agreements were consolidated in 1948 and expired in 1954; they have been renewed for a further five year period, except that the provision for sharing the costs of financial assistance to university students and nurses in training is subject to renewal on a year to year basis. The conditions governing financial assistance to the various types of projects are set forth in schedules attached to and forming part of each agreement. These schedules cover special training classes for members of the Armed Forces, the costs of which are borne entirely by the federal treasury; classes for new employees in defence industries for which the Federal Government pays 75 p.c. of the costs; training programs on an individual or class basis for veterans of the Armed Forces for which the provinces are reimbursed 100 p.c.; and special training programs for employees of Federal Government Departments, the full cost of which is also borne by the federal treasury. In addition the costs of the following types of classes are shared equally between the Federal and Provincial Governments: training for unemployed persons who require such training to fit them for available employment; rehabilitation training for disabled persons; short term classes for young people in rural communities; and training programs for supervisors in industrial establishments. Total expenditure from the federal treasury under these vocational training agreements for the year ended Mar. 31, 1955 was \$869,759.

Correspondence Courses.—Under the provisions of the vocational correspondence courses agreement, the Federal Government shares equally with the Provincial Governments in the costs of printing and preparing correspondence courses. These courses, of which there are approximately 100, must be approved by a committee consisting of the provincial officials in charge of correspondence instruction. They are made available to students anywhere in Canada on the same terms as for students in the province where the course has been prepared. The sum of \$125,000 was appropriated in 1950 to provide for such expenditures during a five year period. Payments are made to the provinces only on completion of approved courses and the term of the agreements has been extended for another fiscal year to take care of incompleted courses and needed revisions.

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, departmental correspondents and from press reports.

30.—Fatal Industrial Accidents 1952-54

Industry	Numbers			Percentages of Total		
	1952	1953	1954	1952	1953	1954

Totals.....	1,449	1,359	1,330	100.0	100.0	100.0

Causes of Industrial Fatalities.—During 1954, 346 of the 1,330 fatal accidents to industrial workers were caused by moving objects, 65 by falling trees and branches, 41 by falling or flying objects in mines and quarries, 37 by automobiles and trucks, and 33 by landslides and cave-ins. Collisions, derailments, wrecks, etc., were responsible for 326 industrial fatalities. Automobiles and trucks were involved in 145 of these accidents, watercraft in 70, tractors in 54, aircraft in 28, and railways in 24. Falls and slips were responsible for 255 industrial deaths, of which 243 were falls to different levels including 76 deaths caused by falls into rivers, lakes, seas or harbours, 34 by falls from scaffolds and stagings, 28 by falls into shafts, pits, excavations, etc., 23 by falls from buildings, roofs and towers and 15 by falls from ladders and stairs. There were 93 deaths caused by exposure to dust and gases and 84 deaths caused by workers being caught in, on or between parts of machinery or other agencies. Conflagrations, temperature extremes and explosions caused 73 industrial fatalities, 71 were caused by overexertion and industrial diseases and 64 by contact with electric current.

Subsection 2.—Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days.

* More detailed information is given in the Department of Labour publication, *Workmen's Compensation in Canada, A Comparison of Provincial Laws*

The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act 1946.

In all provinces free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.—The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.—Under each Act, except those of Saskatchewan and Alberta, if a workman is disabled from earning full wages for fewer than a stated number of days, usually called the 'waiting period', he cannot recover compensation for the period of his disability or, in Manitoba and British Columbia, for the first three days of his disability. Where the disability continues beyond the required number of days compensation is payable from the date of the accident. Medical aid is always paid from the date of the accident. In Saskatchewan and Alberta the waiting period is one day, that is, compensation is not payable when the workman is off work only for the day on which the accident occurs. When he is disabled for a longer time compensation begins from the day following the accident. Compensation in fatal accidents is paid as follows:—

Burial expenses—\$250 in Saskatchewan and British Columbia and \$200 in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and Alberta. In seven provinces a further sum is allowed for transporting the workman's body.

To a widow or invalid widower, or to a foster mother as long as the children are under the age limit—a monthly payment of \$75 in Ontario, Saskatchewan and British Columbia, \$55 in Quebec and \$50 in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta. In addition a lump sum of \$200 is paid in Ontario and Quebec and of \$100 in all other provinces.

For each child in the care of a parent or foster mother receiving compensation—a monthly payment of \$25 in Ontario, Saskatchewan, Alberta and British Columbia, \$20 in Nova Scotia, Quebec and Manitoba, \$15 in Prince Edward Island and \$12 in Newfoundland and New Brunswick with a maximum of \$110 to any one family in Prince Edward Island and \$130 in Nova Scotia.

For each orphan child—a monthly payment of \$35 in Ontario and Saskatchewan, \$30 in Nova Scotia, Quebec, Manitoba and British Columbia, \$25 in Prince Edward Island, New Brunswick and Alberta (in Alberta a further amount, not exceeding \$10 a month, may be given at the discretion of the Board) and \$20 in Newfoundland, with a maximum of \$100 a month to any one family in Prince Edward Island and of \$120 in Nova Scotia.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 years if it is considered desirable to continue a child's education. In Quebec the age limit is 18 years and in New Brunswick and British Columbia compensation is paid to the age of 18 years if a child is regularly attending school. In Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia payments to invalid children are continued until recovery, but the other provinces make payments only for the length of time the Board considers that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to \$100 in Ontario, \$85 in Alberta, \$75 in British Columbia and \$60 in Prince Edward Island, Nova Scotia and Manitoba. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is \$75 a month. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to all dependants if the workman dies. In Newfoundland and Nova Scotia the maximum is two-thirds of the workman's earnings, in New Brunswick, Quebec and Manitoba 70 p.c., and in Prince Edward Island 75 p.c. In Ontario and Saskatchewan the average earnings are the maximum amount payable.

Irrespective of the workman's earnings however compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is \$75 a month or \$95 if there is more than one child; in Manitoba the minimum is \$70 if there is a consort and one child and \$90 if there is more than one child; in Saskatchewan the minimum is \$100 a month to a consort and child and \$115 to a consort and two children plus \$10 a month for each additional child. In Newfoundland a widow must receive at least \$50 a month with a further payment of \$12 for each child under 16 years of age unless the total exceeds \$100. In Ontario the minimum payable to a widow is \$75 a month with a further payment of \$25 for each child up to but not exceeding \$150 a month.

Compensation for total disablement in Newfoundland and Nova Scotia is a periodical payment for the duration of the disability equal to 66 $\frac{2}{3}$ p.c. of average earnings; in New Brunswick, Quebec and Manitoba the rate is 70 p.c. of earnings; and 75 p.c. in Prince Edward Island, Ontario, Saskatchewan, Alberta and British Columbia. Except in New Brunswick the Acts fix minimum sums to be paid for a permanent total disability. The minimum is \$15 a week in Prince Edward Island, Quebec and Manitoba and \$25 in Saskatchewan, Alberta and British Columbia. In Newfoundland the minimum is \$65 a month, in Nova Scotia \$85 a month and in Ontario \$100 a month. If however average earnings are less than these minimum amounts, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement compensation is either a percentage of the difference in earnings before and after the accident, the percentage rate being the same as in total disablement, or the amount is determined by the Board according to the diminution of earning capacity. In all provinces except British Columbia, if the impairment of earning capacity is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based are limited to \$4,000 a year in Quebec, Ontario, Saskatchewan and British Columbia, \$3,000 in Newfoundland, Nova Scotia, New Brunswick, Manitoba and Alberta, and \$2,700 in Prince Edward Island. If the workman's earnings at the time of an accident are not considered a proper basis for compensation the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later if it appears that their earning power would have increased had the injury not occurred.

Table 31 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by the Workmen's Compensation Boards in the years 1951 to 1954.

31.—Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards 1951-54

Totals.....	1,026	463,043	76,965,895

¹ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces.

² This includes, except where noted otherwise, payments to compensate for lost earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures), pensions paid (not total pensions awarded) for temporary and permanent disabilities.

³ The Workmen's Compensation Board of Newfoundland commenced operations on Apr. 1, 1951.

⁴ Does not include payments by employers who make direct compensation to their employees; such employers come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts.

⁵ Not including hospitalization costs.

Section 8.—Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table 32 gives figures for the principal industrial groups. The second column of the table shows the number of workers affected by agreements extended under the Quebec Collective Agreement Act (*see* Sect. 1, ss. 2).

Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. A more detailed table and studies of agreements in certain industries are available from the Department of Labour, Ottawa.

32.—Workers Affected by Collective Agreements by Industry 1953

Section 9.—Organized Labour in Canada*

At the beginning of 1955 there were 1,268,207 labour union members in Canada, practically no change from 1954. The individual unions are listed in Table 35 showing their memberships as at Jan. 1, 1955. At that time the majority of these unions were affiliated with a central labour congress, the three largest of which were the Trades and Labor Congress of Canada, the Canadian Congress of Labour and the Canadian and Catholic Confederation of Labour. These organizations are discussed briefly in the 1955 Year Book, pp. 818-819.

At a labour convention held in Toronto, Apr. 23-27, 1956 the union of the Trades and Labour Congress of Canada and the Canadian Congress of Labour was sealed, effective May 1, 1956. The product of this merger is the Canadian Labour Congress which brings into one organization more than 1,000,000 union members, while guaranteeing the existing jurisdictions and established bargaining relationships of all affiliates. The preamble to the CLC Constitution, which sets forth its aspirations, reads as follows:—

“Dedicated to the proposition that Canadian workers as free citizens are entitled to secure and protect their mutual welfare and that of their families by all legitimate means, this autonomous Canadian Labour centre is brought in being.

“Inherent in this proposition is the attainment of its economic, social and legislative objectives through the organization of Canadian workers in free trade unions, the promotion and advancement of their interests in all fields of common endeavour by the utilization of their collective strength, abilities and resources.

“Founded to contribute to the realization of the legitimate aspirations of those who toil for a living, this organization will not deviate from the pursuit of the cause of peace, freedom and security for all peoples.

“It will at all times hold true to the high levels and principles of social justice on which the Labour Movement was founded.

“Unalterably opposed to corruption and totalitarian ideologies in all forms, it will utilize every resource at its command to combat these evils wherever they may be found. It will seek to eliminate tyranny, oppression, exploitation, hunger and fear, as well as discrimination on the basis of race, colour, creed or national origin.

“With a keen appreciation of the tremendous responsibilities which it has assumed, this organization accepts the challenge of the future to foster and defend the principles of democracy in the economic, social and political life of the nation.”

The Constitution of the Congress provides for the establishment of an Executive Committee consisting of the President, the Executive Vice-President and the Secretary Treasurer, an Executive Council comprising the three principal officers and 13 Vice-Presidents, and a General Board which includes the Council plus one principal Canadian officer of each affiliated organization. The biennial convention is the policy making body of the Congress. The Executive Council, which is to meet at least three times a year, officiates between conventions and the General Board functions in a consultative and advisory capacity.

The Executive Council was empowered at the convention to negotiate the terms of affiliation of the Canadian and Catholic Confederation of Labour, the One Big Union and the Canadian membership of the United Mine Workers of America.

* Information concerning unions is published in the Department of Labour annual publication, *Labour Organization in Canada*.

Section 10.—Strikes and Lockouts*

Major issues in strikes and lockouts during 1954 are shown for the first time under three main groups: (1) renewal of agreement; (2) during term of agreement; and (3) no agreement in effect. Although only about one-half of the total number of work stoppages came within the first category, such disputes were by far the most significant in terms of time loss. Disputes arising during negotiations for a new agreement accounted for 53 p.c. of the stoppages, involved 82 p.c. of the workers and caused 95 p.c. of the total idleness; those occurring during term of agreement caused 25 p.c. of the stoppages and involved 14 p.c. of the workers but caused only 2 p.c. of the time loss; and disputes in establishments where no collective agreement was in effect at the time of occurrence accounted for 22 p.c. of the stoppages, involved 4 p.c. of the workers and caused 3 p.c. of the total time loss.

As in the past eight years the demand for wage increases and related questions was the central issue in the majority of stoppages in 1954 and this demand, linked with questions involving union security, changes in hours and conditions of work, was a factor in 59 p.c. of the stoppages which involved 80 p.c. of the workers and caused 96 p.c. of the total idleness. The average for the period 1946-53 was 58 p.c. of the stoppages, 70 p.c. of the workers and 88 p.c. of the total time loss.

Settlement of 72 of the 174 disputes occurring in 1954 was brought about by direct negotiations; provincial conciliation effected settlement in 33 cases and civic mediation in one; two disputes were referred to labour boards and six to arbitration; 40 by return of workers and replacement, the latter being a factor in 12 cases; and 10 were indefinite in result.

* A complete review of strikes and lockouts during 1953 and 1954 is given in Department of Labour reports.

36.—Summary Statistics of Strikes and Lockouts 1945-54

Year	Strikes Beginning during the Year	Strikes and Lockouts in Existence in all Industries during the Year

¹ None reported.² Includes non-ferrous metal smelting.³ Includes erection of all large bridges.⁴ Includes water service.

Section 11.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session held at Montreal, Que., Oct. 2, 1946 and by the United Nations General Assembly on Dec. 14, 1946 the Organization became a specialized agency of the United Nations although retaining its autonomy.

The ILO is an association of 69 Member States, financed by their governments, and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the International Labour Conference; (2) the International Labour Office, and (3) the Governing Body. Since World War II the ILO has extended its field of activities by the establishment of eight tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by the expanded program of technical assistance to aid the development of backward countries in such fields as co-operatives, vocational training, productivity techniques and employment service organization.

The *International Labour Conference* is a world parliament for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the Government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form

of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal: it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders and is not subject to ratification by the Member States.

The *International Labour Office* acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on all subjects concerned with industry and labour. In the operational field it assists Member States by furnishing experts on manpower training and technical assistance. The ILO maintains branch offices in all parts of the world, including the Canada Branch, 95 Rideau Street, Ottawa.

The *Governing Body* of the ILO, by a constitutional amendment adopted in June 1953, consists of 40 members: 20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place, and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body meets three times a year, and has general supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the various Conferences. Canada's representative on the Governing Body is Mr. Arthur H. Brown, Deputy Minister of Labour for Canada, who is Chairman of the Governing Body for the period 1955-57.

There have been 38 Sessions of the International Labour Conference, at which 104 Conventions and 100 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers, unemployment and health insurance, protection of migrant workers, equal remuneration, and many other aspects of industrial and social problems. By August 1955 the ratifications of Conventions by Member States totalled about 1,525.

Canada has ratified 18 ILO Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subject covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official liaison agency with the International Labour Organization, is responsible for forwarding to the ILO Office annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings and accounts of the discussions and the decisions are regularly published in the *Labour Gazette*. The Department also keeps the provincial governments and the major employer and worker organizations informed of ILO activities.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of 15,601,000 (estimate of June 1, 1955). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

The extent of government control over the agencies of transportation is covered in Part I of this Chapter and the following Parts deal, respectively, with the various types of transport facility.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflects to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in

rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, today's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now provide their own transportation, it is evident that a large part of the present competition between common carriers will become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations—retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport. Indicative of this trend is the amendment to the Transport Act passed in 1955, which extends the freedom of the railways to make the contract rates with shippers known as agreed charges.

On Nov. 2, 1936 the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence to form the new Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the Judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954 jurisdiction over interprovincial and international highway transport rests with the Federal Government. Federal and provincial representatives conferred in Ottawa in April 1954 on means of implementing that decision and on June 26, 1954 the Motor Vehicle Transport Act was passed by the Federal Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

Under the Transport Act 1938 the Board of Railway Commissioners became the Board of Transport Commissioners and the Board, in addition to its authority over railways, was given power to regulate certain aspects of water transportation on the Great Lakes and on the Mackenzie and Yukon Rivers.

The Royal Commission on Transportation, in its Report to Parliament in 1951, recommended the more complete co-ordination of transport agencies by the creation of a single Board to take over the functions then discharged by the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission. No action has been taken by Parliament on this recommendation.

The Board of Transport Commissioners for Canada.—The situation that led to the introduction of railway regulation by Commission in Canada, and other information relating to the organization, procedure, judgments, etc., of the Board of Transport Commissioners is dealt with in the 1940 Year Book, pp. 633-635.

The powers of the Board with regard to rail transport cover almost all aspects of railway activities including corporate organization, location, construction and operation of lines, rates and charges. The railways under the Board's jurisdiction include those operating interprovincially, the Canadian portions of United States lines and those incorporated under federal charter. In addition the Board assumes jurisdiction over any railway which,

by Act of Parliament, has been declared to be for the general advantage of Canada. In practice this means that, apart from provincially owned railways in Ontario and British Columbia, all railways in Canada are under the Board's authority.

Once constituted the Board became the logical body to be entrusted with the regulation of other transportation and communication agencies. The list has grown steadily and now includes express companies, telegraph companies, telephone companies, other than those provincially or municipally controlled, international bridges and tunnels, inland shipping and pipelines. Regulation of traffic of water carriers on the Great Lakes-St. Lawrence system is limited to package freight and thus excludes the important bulk traffic in grain, coal and ore.

A review of transportation regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations have been incorporated into amendments to the Railway Act including: the equalization of freight rates between all regions of Canada, affecting chiefly the class and commodity mileage rates; the requirement that, when transcontinental competitive rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental systems in Ontario (between Sudbury, Capreol and Cochrane and between Port Arthur and Armstrong), up to the amount of \$7,000,000 annually, the amounts so received by the railways to be offset by certain reductions in rates between eastern and western Canada; the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways; and the simplification of the capital structure of the Canadian National Railways involving the replacement of Government-held debt by preferred stock. Pursuant to the amendments a uniform scale of mileage loss rates has been prescribed and hearings have been held *re* equalization of commodity rates. Agreed charges were also reviewed by the Hon. W. F. A. Turgeon in 1955 and his recommendations were implemented in amendments to the Transport Act in 1955.

Certain other recommendations of the Commission have been put into effect, or are being studied with a view to putting them into effect at an early date without any legislative amendments. These include the establishment of a uniform carload mixing rule and a general revision of the freight classification.

The Air Transport Board.—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff comprises an Executive Director's Branch including Legal, International Relations, and Traffic Divisions, and a Secretary's Branch including Administrative, Licensing, and Inspection and Enforcement Divisions.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidation, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, published in the *Canada Gazette*, relating to all air services or groups of air services; Board Orders relating to individual air services; and Rules and Circulars for general guidance and information.

Financial and operating statistics are collected under authority of the Board's Regulations by the Economics Division of the Department of Transport, which serves the Board of Transport Commissioners for Canada as well as the Air Transport Board.

The Board is currently devoting special attention to the publication of a uniform charter tariff and to the formulation of basic principles for the guidance of operators in the establishment of their rates and fares. Helicopter operations are under constant review by an economic and technical committee set up for the purpose.

The rapid industrial and commercial advancement of the country has reflected the use of increasingly larger aircraft necessitating further study and possible alteration of the basic policies underlying Air Transport Board regulations in the field of charter operations, both domestic and international.

In the field of international aviation, the Board continues to take an active part in the work of the International Civil Aviation Organization, a member of its staff being the representative of Canada on the Council, and has participated in discussions and negotiations with several countries concerning proposed new bilateral air-transport agreements and amendments to existing agreements.

Canadian Maritime Commission.—By authority of an Act of Parliament (R.S.C. 1952, c. 38) passed in 1947 the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services.

In addition to these duties, the Act empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

PART II.—RAIL TRANSPORTATION*

The treatment of rail transport in this Chapter is divided into three Sections dealing, respectively, with railways, urban transit systems and express companies.

Section 1.—Railways

The railways of Canada have served and will continue to serve as the principal facility of movement because only they have the capacity to supply cheap all-weather transportation in large volume over continental distances. Because of their premier importance in the transport picture, statistics concerning them are much more complete than for other forms of transportation.

Two great transcontinental railway systems operate almost all of the railway facilities in Canada. The Canadian National Railway System, a government owned system, is Canada's largest public utility operating, in addition to its rail network and the multifarious associated facilities, a fleet of coastal and ocean-going steamships, a nationwide telegraph service providing efficient communication between all principal points of Canada with connections to all parts of the world, express facilities in Canada and abroad, a chain of hotels, a scheduled trans-Canada and North American air service and a trans-Atlantic air service. The Canadian Pacific Railway Company, a joint-stock corporation, has, in addition to its farflung railway operations, a fleet of inland, coastal and ocean-going vessels, a north-south airline system which is one of the world's greatest air freight carriers, a transpacific airline service to the Orient and the Antipodes, air service to Mexico and

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. Certain of the financial statistics were compiled in co-operation with the Department of Transport.

Peru and a Polar route from Vancouver to Amsterdam, a chain of year round and resort hotels, a cross-Canada telegraph network, a worldwide express service and a truck and bus transport service.

The statistics of Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book, pp. 840-847.

Subsection 1.—Milage and Equipment

Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-1917), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in the milage of single track line since the 1920's but recently the construction of several large industrial projects in outlying districts has sparked a new phase of railway building. Entirely new districts have been opened up by the construction of the 43 mile Terrace-Kitimat line in British Columbia, the 144 mile Sherridon-Lynn Lake line in Manitoba and the 360 mile Quebec, North Shore and Labrador Railway. A new 80 mile line links Quesnel and Prince George in British Columbia. A 16 mile line connecting the mining community of Nephton with Havelock in eastern Ontario provides easy access to an area producing non-metallic rock. Two branch lines, one from Struthers to Greco and one from Hillsport to Manitouwadge, tap this new mining district of northwestern Ontario, and a line was under construction in 1955 to open up another Quebec mining area from Beattyville to Chibougamau and St. Felicien. In Saskatchewan also, about 29 miles of new track have been completed. While these new lines have added considerably to the single track milage placed in operation in the past few years, other lines have been abandoned because they were unprofitable so that the new milage is not altogether reflected in the totals shown in Table 1.

1.—Railway Track Milage Operated 1900-53

NOTE.—Figures of total milage of single track operated for 1835-1909 are given in the 1941 Year Book, p. 546, or 1911-14 in the 1954 edition, p. 786, and for 1916-24 in the 1955 edition, p. 830.

Rolling Stock.—The figures in Table 2 may be supplemented by the statement that between 1949 and 1953 the average capacity of box cars increased from 43,531 tons to 45,065 tons and of gondola cars from 61,453 tons to 63,747 tons, flat cars from 42,892 tons to 44,127 tons, hopper cars from 58,721 tons to 63,588 tons and of all freight cars from 45,335 tons to 47,526 tons. The average tractive power of locomotives advanced during the same period from 41,923 lb. to 42,741 lb. The gradual changeover to diesel operation is indicated by the decrease in steam locomotives and the steady increase in oil burning and diesel locomotives in operation.

Subsection 2.—Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government owned railways are given separately and in detail in Subsection 4.

Capital Liability and Investment.—The capital liability of the Canadian railways for the years 1934 to 1953 is shown in Table 3. The increase of \$146,547,586 in 1953 over 1952 compares with an increase in investment in road and equipment of \$205,135,829, as shown in Table 4, and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property, and other factors.

* Statistics for individual railways are given in DBS annual report, *Railway Transport*, published in five parts.

3.—Capital Liability¹ of Railways 1934-53

NOTE.—Figures for 1876 to 1925 are given in the 1927-28 Year Book, p. 649; those for 1926-33 in the 1947 edition, p. 662.

Year	Stocks	Funded Debt	Total	Year	Stocks	Funded Debt	Total
	\$	\$	\$		\$	\$	\$

¹ Details given in DBS annual report, *Railway Transport*, published in five parts.

Earnings and Expenses.—The operating ratio, or ratio of expenditure to revenue, of Canadian railways in 1943 reversed a declining trend and began to rise, mainly because of increasing costs for materials and labour. From 1943 to 1953 gross earnings increased 54.8 p.c., but operating expenses increased 96.3 p.c., so that net earnings per mile of line showed a decrease of 48.2 p.c.

5.—Earnings and Operating Expenses of Railways 1944-53

NOTE.—Gross earnings and operating expenses for 1875 to 1914 are given in the 1916-17 Year Book, p. 434; those for 1915-25 in the 1941 Year Book, p. 550; for 1926-39 in the 1942 Year Book, p. 585; and for 1940-43 in the 1951 Year Book, p. 722. Newfoundland included from Apr. 1, 1949.

Employment and Salaries and Wages.—In the ten latest years for which figures are available (1944-53) the number of railway employees increased by 21 p.c. and their salaries and wages by 95 p.c. Maintenance-of-equipment employees, on hourly rates, worked about 14 p.c. fewer hours and were paid 87 p.c. more wages per hour; average hours worked by transportation employees were nearly 15 p.c. fewer and their pay was increased by about 80 p.c. These figures reflect salary and wage increases received in 1950, 1952 and 1953 and the conversion to the five day week in 1951.

7.—Railway Employees and their Earnings 1944-53

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551; for 1940-43 in the 1951 edition, p. 723. Newfoundland included from Apr. 1, 1949.

¹ Includes approximately \$10,000,000 in wages earned in 1943.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way.

As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture

issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the federal or provincial governments since 1939.

During the era of railway expansion before 1918 provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. The only provincially guaranteed railway bonds outstanding at Dec. 31, 1953 were those of the Government of New Brunswick to the amount of \$465,000. Federal Government guarantees at the same date amounted to \$510,248,955; this amount does not include \$3,728,436 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Traffic

Table 8 shows the passenger and freight statistics for all railways for the years 1944-53. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 802-803.

8.—Statistics of Passenger and Freight Services and Revenue Receipts 1944-53

NOTE.—Figures for 1910-43 are given in the corresponding table of previous Year Books.

¹ Includes express, baggage, mail and other cars. ² Duplications included. ³ Newfoundland included from 1950. ⁴ Includes caboose miles but excludes miles made in passenger and non-revenue trains. ⁵ Duplications eliminated; see Table 9 for details of freight carried.

The amount of revenue freight carried on the railways in 1953 was slightly less than that carried in 1952. Of the 156,249,259 tons carried in the later year, mine products accounted for 34.0 p.c., manufactured and miscellaneous products 31.2 p.c., agricultural products 23.2 p.c., forest products 10.4 p.c., and animals and animal products 1.2 p.c. As compared with 1952 agricultural products carried dropped 2.9 p.c., mine products 3.2 p.c., forest products 16.2 p.c., and manufactures and miscellaneous products 0.3 p.c. The animal products group was the only one to record an increase and that increase amounted to 10.3 p.c. The largest increases among the individual commodities carried were shown by meats and other edible packing-house products, sand and gravel, stone, gasoline and petroleum products and automobiles, trucks and parts.

9.—Commodities Hauled as Freight on Railways 1949-53

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

1952.....	2	183	74	7,019	317	707	393	7,909
1953.....	4	181	35	5,917	266	727	305	6,825

¹ Includes trespassers walking along tracks, stealing rides, etc., and persons crossing tracks at level crossings.² Newfoundland included from Apr. 1, 1949.

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

Subsection 4.—The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report, *Canadian National Railways*.

Financial Statistics.—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the Company on its formation in 1923 are described in the special article mentioned above. Briefly the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain

* The Hudson Bay Railway is a direct responsibility of the Federal Government and has been operated by the CNR for the Government since Apr. 1, 1935; statistics relating to the operation of this line are not included in the data for the CNR.

loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act 50 p.c. of the Company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also for a term of ten years ending Dec. 31, 1961 the Railway is not obliged to pay interest on \$100,000,000 of its long term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the Company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.

12.—Capital Structure of the Canadian National Railway System as at Dec. 31, 1945-54

NOTE.—Information given in greater detail in DBS report, *Canadian National Railways*.

¹ Excludes work service.

Section 2.—Urban Transit Systems

The collection of statistical information on urban transportation systems is at present undergoing extensive reorganization. Such drastic changes have been made in recent years in the types of vehicles used for mass passenger movement in urban centres that the statistical series, which began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, has become inadequate.

The new series will cover all transit systems including electric railway, rapid transit or subway, motor bus, motor coach or trolley coach operation carrying passengers (and incidentally freight or express) in urban, suburban or interurban service. A transit system may mean any one of these operations or any combination of them. Table 16 gives currently available summary statistics for all urban transit systems. Tables 17 to 20 give the latest information on electric railway systems, continuing the series presented in previous editions of the Year Book until the new, more comprehensive series becomes available.

Urban Transit Statistics.—There were 4.2 p.c. fewer passengers carried on urban transit vehicles in 1955 than in 1954. The decrease occurred mainly in electric car systems. Vancouver and Winnipeg discontinued electric car operations in April and September 1955 respectively and Montreal, Toronto and Ottawa converted some routes from electric car

to trolley and motor bus operation. There were 35,147,070 passengers carried by the Toronto Subway in 1955, a figure included in the 398,439,820 electric car total for the year. Passenger revenue was down from \$120,238,281 in 1954 to \$120,143,866 in 1955 despite fare increases in Montreal, Vancouver, Winnipeg, Windsor and Saskatoon.

16.—Summary Statistics of Urban Transit Systems 1954 and 1955

¹ Includes 27,690 passengers carried by the Toronto subway in 1954 and 35,147,070 passengers in 1955. ² Includes 4,734,443 miles run by the Toronto subway cars in 1954 and 5,597,500 miles in 1955.

Electric Railway Systems.—The statistics given here cover the urban and inter-urban operations of electric railway systems. Almost all the urban systems are now municipally owned, the largest privately owned system being the British Columbia Electric Railway Company; most of the interurban firms are controlled either by the Canadian National or Canadian Pacific Railways. The number of electric railways declines each year as motor and trolley buses replace electric cars. Of the 22 systems in service in 1953, six operated electric cars, motor buses and trolley buses; nine operated trolley buses and motor buses; three operated electric cars only; one operated electric cars and motor buses; one, trolley buses only; one, motor buses only; and one reported no electric cars, motor buses or trolley buses. The latter two perform switching operations for railways.

17.—Equipment of Electric Railways 1951-53

The financial statistics of electric railways given in Table 18 have been greatly affected by variations in traffic and by changes in mode of local transportation. When electric railways have ceased operation because of decline in traffic or have substituted other types

of rolling stock their figures have been dropped from the tabulation. Despite changing conditions however the gross revenue of electric railways has continued to rise in the postwar years. The ratio of expenses to receipts advanced from 86 p.c. in 1946 to 97 p.c. in 1953. Many systems have changed from private to public ownership in the past few years which accounts for much of the recorded decline in the value of stocks and the increase in funded debt.

18.—Financial Statistics of Electric Railways 1944-53

NOTE.—Figures for 1901-43 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

Year	Capital Liability			Investment in Road and Equip- ment	Gross Earnings	Operating Expenses	Ratio of Ex- penses to Re- ceipts	Em- ployees	Salaries and Wages
	Stocks	Funded Debt	Total

1953.....	4,336,065	181,781,857	186,117,922	283,256,339	107,990,692	105,027,443	97-26	20,408	68,638,778

¹ Decrease from 1951 accounted for by the re-capitalization of the Winnipeg Electric Company; transit facilities of that Company were transferred to the Greater Winnipeg Transit Company.

In 1953 electric cars travelled 66,798,532 miles in passenger service, trackless trolley buses operated by electric railway companies travelled 34,801,515 miles and motor buses 61,176,376 miles. Although most of the urban centres in which transit services operate have greatly extended their populated areas in the postwar years, electric cars and buses travelled fewer passenger miles each year since 1948 and the number of fare passengers carried declined each year since 1946.

The Toronto Underground Electric Railway.—Construction of Canada's first underground electric railway or subway commenced at Toronto in 1949 and the line was put into operation in March 1954. The route of the subway follows the general line of Yonge Street, a distance of about 4.5 miles from Front Street to Eglinton Avenue. Twelve stations are located along the line and a pedestrian tunnel links the Union Station and the Royal York Hotel with the subway. Subsurface sections of the subway are from six to 20 feet underground. Rapid-transit cars, 104 in number, each of 62 passenger capacity are used. The 500 foot platforms at all stations accommodate trains of up to eight cars in length which handle a peak load of 40,000 passengers an hour in each direction.

Section 3.—Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing these services; railway facilities are used by virtue of contracts with the railway companies. Express companies in Canada have always operated in close co-operation with the railways.

Goods are sent by express for quick transit so that express rates do not generally compete with freight rates. The Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave, in its first tariff, a rate of two and one-half times the maximum first class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue and the rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. All express companies are organized under powers conferred by Federal Government legislation and their business consists in the expeditious shipment of valuable livestock and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

Express Company Operations.—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway, Alaska, to points in Yukon Territory. No statistics are available on the volume of traffic carried by express because much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult.

21.—Summary Statistics on the Operations of Express Companies 1945-54

NOTE.—Figures for 1911-44 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

PART III.—ROAD TRANSPORTATION*

In this Part of the Chapter, highways and motor vehicles are treated as related features of transportation. Following an introductory section which summarizes provincial regulations regarding motor vehicles and motor traffic, the entire subject of road transportation is dealt with under the headings of roads and highways and motor vehicles.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The sources of information for detailed regulations for specific provinces and territories are given at pp. 809-810.

General.—The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations that are common to all provinces and territories are summarized under the following headings:—

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and Quebec), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences are also granted to those who have not reached the specified age.

Motor Vehicle Regulations.—In general all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one in the front and one on the back of the vehicle (one only for the back in the case of trailers). In most provinces in event of sale the registration plates stay with the car but in Manitoba the plates are retained by the owner. A change of ownership of the vehicle must be recorded with the registration authority. However exception from registration is granted for a specified period (usually at least 90 days) in any year to visitors' private vehicles registered in another Province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles an hour (60 in Quebec and Alberta; in Manitoba 60 in daytime and 50 at night), are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor vehicles must not pass a tram that has stopped to take on or discharge passengers, except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Penalties.—Penalties ascend in scale from small fines for minor infractions of any of the regulations to suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor vehicle while intoxicated.

Safety Responsibility Legislation.—Each province of Canada has enacted legislation under this heading (sometimes referred to as Financial Responsibility Legislation). In general these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of an offence arising out of a motor vehicle accident,

* Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor vehicle and traffic Acts and Regulations in the individual provinces and territories.

or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed.

Although Safety Responsibility Legislation has not been enacted in either the Yukon Territory or the Northwest Territories, the Motor Vehicle Ordinances of the two Territories require the owner of a motor vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration.

Unsatisfied Judgment Funds.—In recent years a new type of motor vehicle legislation has been enacted in all provinces except Quebec and Saskatchewan. This has usually taken the form of an amendment to the motor vehicle laws of the province and provides for the establishment of an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued, except in British Columbia where the Fund is maintained by insurance companies. This fee does not exceed \$1 per annum. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit and run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In all provinces except Manitoba the limits are \$5,000 for one person, \$10,000 for two or more persons injured in one accident and \$1,000 for property damage. In Manitoba the legal limits for third-party liability were increased in 1955 to \$10,000, \$20,000 and \$1,000 respectively. For 'hit and run' accidents payments are made for personal injuries or death only.

Ontario

Administration.—Motor Vehicles Branch, Department of Highways, Toronto.

Legislation.—The Highway Traffic Act (R.S.O. 1950, c. 167), the Public Vehicle Act (R.S.O. 1950, c. 322) and the Public Commercial Vehicle Act (R.S.O. 1950, c. 304).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (R.S.M. 1954, c. 112) as amended.

Saskatchewan

Administration.—Treasury Department, Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act.

Alberta

Administration.—Motor Vehicle Branch, Department of Highways, Edmonton.

Legislation.—The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) as amended, the Motor Vehicles Accident Indemnity Act (1947, c. 11) as amended, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act and Motor Vehicle Accident Indemnity Act are administered by the Motor Vehicle Branch, Department of Highways.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Motor Vehicle Ordinance (1952, First Session, c. 8) as amended.

Northwest Territories

Administration.—Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Motor Vehicles Ordinance (1950, c. 16) as amended.

Section 2.—Highways and Roads

The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper and mining companies, although these are not generally available for public travel. At the same time great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

As at Mar. 31, 1954 the total mileage of highway and rural roads in Canada was 524,055. This mileage includes all roads under provincial jurisdiction, federal roads including those in the National Parks and the Yukon and Northwest Territories, and local roads under municipal jurisdiction other than the milages in cities and towns. The latter are given separately under the heading "Urban Streets" p. 813.

The 1954 figures are not strictly comparable with those for Mar. 31, 1953; the total of 517,809 miles for the earlier year is divided as follows: portland cement concrete, 1,841; bituminous pavement, 14,820; bituminous surface, 14,070; gravel and crushed stone, 160,265; earth roads, 326,812. New road surveys in Newfoundland and Prince Edward Island and a

reclassification in Manitoba resulted in a considerable decrease in gravelled milages in those provinces in 1954 and therefore in the total for Canada. The changes also contributed to an increase of 4,627 miles in the length of earth roads. The Prince Edward Island survey brought a decrease in reported mileage in that Province from 3,716 to 3,191 miles. Alberta mileage dropped by 227 to 85,489 miles and the Territories remained unchanged. All other provinces reported increases during the year. Federal roads in the ten provinces, including those within federal lands such as the National Parks and the Federal District Commission driveways around Ottawa, measured 1,971 miles including 729 in the North West Highway System of British Columbia. In addition the 2,128 miles of roads in the Yukon and Northwest Territories are all classed as federal roads.

1.—Milage of each Type of Road by Province as at Mar. 31, 1954

NOTE.—The figures for Canada are the sums of the milages so reported. Urban streets are not included.

¹ Includes improved earth roads. ² Includes "long bridges". ³ Includes milages of roads gravelled but details not available. ⁴ Does not include surveyed road allowances not in use. ⁵ Includes all road allowances.

Higher levels of expenditure during the year ended Mar. 31, 1955 brought total expenditures on highways, bridges, etc., in the five year period Apr. 1, 1950 to Mar. 31, 1955 to more than \$1,800,000,000 of which \$1,100,000,000 was on new construction and major reconstruction work. In addition during the same period over \$365,000,000 was spent on roads, bridges, etc., in rural municipalities, more than \$213,000,000 of it on new construction and major improvements. The length of surfaced highways increased from 166,899 miles at Mar. 31, 1951 to 192,616 miles at the end of March 1955 while the length of paved and bituminous surfaces increased by 34.3 p.c. in the five year period. Surfaced roads accounted for 36.8 p.c. of all highways open to traffic at the end of Mar. 31, 1955 and paved highways represented 6.4 p.c. of the total.

Expenditures on roads and highways outside urban areas during the year ended Mar. 31, 1955 were \$429,472,008, about 8.2 p.c. higher than in the previous fiscal year when the outlay was \$397,068,159 and 6.2 p.c. higher than the previous peak year of 1952-53 when \$404,291,421 was expended. This rise was partly accounted for by the inclusion in the Saskatchewan statistics of expenditures in local improvement districts, rural municipalities, villages and towns (less than 1,000 population) not previously reported. Construction work accounted for \$229,087,011 of the total in 1954-55 whereas \$234,334,349 was spent on this phase of road work in 1953-54. Maintenance charges rose 19.3 p.c. from \$149,844,221 to \$178,832,011. The ten provincial governments spent \$355,454,863 in 1954-55 compared with \$341,501,941 in 1953-54 and federal expenditures were up from \$26,759,571 to \$32,775,800.

¹ Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crossings, etc., amounting to \$1,443,009 in 1951-52, \$925,580 in 1952-53, \$712,523 in 1953-54 and \$1,237,237 in 1954-55. ² Includes federal administrative costs re Trans-Canada Highway amounting to \$282,652 in 1951-52, \$298,230 in 1952-53, \$399,834 in 1953-54 and \$431,002 in 1954-55. ³ Federal administrative costs only.

The Trans-Canada Highway System.—An outline of the Agreement on and specifications and construction of the federal-provincial Trans-Canada Highway and a map showing the proposed route in the provinces participating is given in the 1951 Year Book, pp. 631-634. The road will be a hard-surfaced two lane highway, 22 to 24 feet in width, with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, and a load-bearing capacity of nine tons for one axle. Railway grade crossings will be eliminated wherever possible. Eight provinces entered into this Agreement with the Federal Government in 1950 and Nova Scotia became party to it in 1952. The Highway in these nine provinces has a length of 4,580 miles, divided as follows: Newfoundland 610 miles; Prince Edward Island 74; Nova Scotia 310; New Brunswick 388;

Ontario 1,412; Manitoba 305; Saskatchewan 414; Alberta 292; British Columbia 692; and the National Parks 83. Quebec, while not co-operating with the Federal Government on a financial basis, is still providing a highway linking the two ends of the Trans-Canada route in Ontario and New Brunswick.

Contractual commitments for the nine participating provinces with respect to new construction on the Highway during the period Dec. 9, 1949 to Mar. 31, 1955 amounted to \$179,096,584 of which the Federal Government's share was 50 p.c. or \$89,548,291. Federal payments to the provinces during this period for prior, interim and new construction totalled \$65,462,051. On-site labour expended on the Highway up to Mar. 31, 1955 amounted to 3,426,801 eight-hour man-days of employment; off-site employment required for the provision of necessary materials and services is estimated at 5,825,562 man-days. The Highway through the National Parks is being constructed with Federal Government funds and the amount of \$5,500,000 was allotted by Parliament for that purpose for the year ended Mar. 31, 1956.

By August 1955 contracts for 1,835 miles of grading had been approved and the equivalent of 1,554 miles built, contracts for base-course and paving had been approved for 1,357 miles and the equivalent of 1,167 miles completed, and 117 bridges, overpasses and other structures having over 20 foot spans had been completed.

Urban Streets.*—Statistics of streets, sidewalks, bridges and culverts in cities and towns have been collected since 1935. The smaller municipalities are not included but these do not incur much expense for street construction and maintenance and their inclusion would add little to the total. In the year ended Mar. 31, 1954, 317 municipalities reported 15,909 miles of streets, 4,709 miles of which were bituminous pavement, 804 miles concrete pavement, 3,845 miles bituminous surface, 3,689 miles gravel and crushed stone and 72 miles other surfaces. Thus the total length of surfaced street was 13,119 miles and the remainder was earth road. Expenditures on urban streets in 1954 by 317 municipalities amounted to \$93,045,185 as compared with \$82,981,153 spent by 303 municipalities in the previous year. The 13 cities reporting outlays of over \$1,000,000 in the later year accounted for 57.3 p.c. of the total expenditure. The metropolitan city of Toronto alone spent \$6,300,000 or 5.8 p.c. of the total. The major development in urban spending in 1954 was the assumption of responsibility for major thoroughfares in the Toronto area by the Municipality of Metropolitan Toronto whose principal accomplishment during the year was the resurfacing of Yonge Street at a cost of \$1,200,000.

Section 3.—Motor Vehicles

Registration.—Automobiles were registered in Canada for the first time in 1904. Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913; and Yukon Territory in 1914.

In 1905 only 565 motor vehicles were registered in Canada but by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048. With the exception of 1931-33 an annual increase was in evidence until 1941 when 1,572,784 motor vehicles were registered. The number of commercial vehicles continued to increase during the war years but a considerable decline was shown in passenger cars because of the restrictions on manufacture and the rationing of tires and gasoline. However postwar recovery

*Additional information on urban streets is given in DBS annual report, *Highway Statistics*.

was rapid and registrations have risen steadily to a 1954 total of 3,644,589, including 2,688,465 passenger cars and taxis, 908,599 trucks and miscellaneous vehicles, 9,860 buses and 37,665 motorcycles.

3.—Motor Vehicles Registered by Province 1945-54

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given in the 1937 Year Book, p. 668, and those for 1936-44 in the 1948-49 edition, p. 707.

Apparent Consumption of Automobiles.—The apparent consumption of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales in Canada are given in Chapter XXI, Domestic Trade.

¹ Factory shipments since 1952.² Includes Armed Forces vehicles.

Provincial Government Revenue from Motor Vehicles.—The taxation of motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1954 the average cost per motor vehicle for operating taxes and licences was almost \$90. Lower gasoline tax rates in the five provinces from Ontario westward brought the averages for those provinces below the national average. Present gasoline tax rates range from nine cents per gallon in Manitoba to 17 cents in Newfoundland and Nova Scotia.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 6. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXIV, Public Finance.

6.—Provincial Revenue from the Registration and Operation of Motor Vehicles, Years Ended Mar. 31, 1955

¹ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. ² Included with trucks. ³ Included with other motor vehicles.

Sales of Gasoline.—'Gasoline', under the provincial Acts, is considered to include all petroleum oils used as fuel in internal combustion engines, as well as propane gas which is being used to an increasing extent in motor buses.

¹ Estimated net sales for Newfoundland, amounting to 8,842,000 gal. in 1950 and 10,816,000 gal. in 1951, are included in net totals; gross sales for those years are not available.

Motor Carriers.*—Statistics of the 'for hire' segment of the motor carrier industry have been collected since 1941. Until 1946 firms having a gross revenue of \$8,000 or more were included but in 1947 the coverage was extended to include motor carriers having gross revenues of less than \$8,000.

The continued co-operation of provincial authorities, trucking associations and other interested parties has resulted in gradual improvement in the statistical accuracy of these data but much still remains to be done. Little capital is required to enter the trucking business and as a result many marginal operators are associated with the industry. The large turnover and numerous changes in operators each year creates many problems in the collection of statistics. Continued growth of the industry is indicated by the latest figures which, partly through amalgamations, show a smaller number of reporting firms than in 1952 but indicate an increase to \$261,422,465 (1953) from \$233,973,179 (1952) or approximately 11·7 p.c. in gross revenue.

For presentation, motor carriers have been separated into six groups, three freight and three passenger. Freight carriers are grouped as follows: (1) those having revenues of \$20,000 or over; (2) those having revenues between \$8,000 and \$19,999 and (3) carriers grossing less than \$8,000 per year. All city passenger carriers are included in the "city" group while "intercity and rural" passenger operators are divided between group (1), those having revenues over \$20,000 and group (2) which includes the operators with gross revenues of less than \$20,000.

* Statistics are given in more detail in DBS annual report, *Motor Carriers, Freight-Passenger*.

These statistics do not include motor bus operations of street railways except where such services are entirely motorized. Motor bus data for street railways are included under electric railway systems (*see* p. 804). Excluded are operations of vehicle fleets owned and operated by private companies where the vehicles are not available for public service, such as dairies, bakeries, departmental and grocery stores, oil and gasoline distributors, breweries, etc. Operators under almost exclusive contract, such as those engaged in the collection of milk or co-operative owned vehicles, are also excluded as are school buses owned and operated by school boards or municipalities or under contract.

¹ Incomplete coverage.

Motor Vehicle Accidents.—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. The Dominion Bureau of Statistics compiles statistics on all deaths from motor vehicle accidents and these are shown in Table 10. A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has also been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.

Data presented in Table 11 relate to traffic accidents only and consequently may not be compared with Table 10 which includes details of fatalities occurring elsewhere than on public streets or roads.

10.—Deaths Resulting from Motor Vehicle Traffic and Non-traffic Accidents by Province 1945-54

NOTE.—Figures for 1926-35 will be found in the 1941 Year Book, p. 578, and those for 1936-44 in the 1948-49 edition, pp. 712-713.

¹ Reports are for accidents causing property damage estimated at \$50 or over except for the following: Saskatchewan reports \$100 or over; Quebec and Yukon report \$25 or over; Alberta and N.W.T. report \$75 or over. Charlottetown, P.E.I. reports all accidents to Sept. 30, 1954 and \$50 or over thereafter. Ontario reports from \$50 to \$100 with effect Apr. 6, 1954. ² Included with "Drivers" and "Passengers."

PART IV.—WATERWAYS*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated under the Canada Shipping Act (R.S.C. 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

In view of the current interest in the St. Lawrence Seaway project which, when construction is completed, will provide greatly extended facilities for the movement of commodities along its course, a special article is included here giving an account of the present use of the St. Lawrence waterway and the shipping service it now provides.

Following the special article, developments and equipment to facilitate water traffic are classified in Subsections 1 to 4 under the headings of shipping, harbours, canals and aids to navigation. Subsection 5 gives information regarding pilotage service, steamship inspection and personnel shipped and discharged.

TRAFFIC ON THE GREAT LAKES-ST. LAWRENCE SEAWAY†

The Great Lakes-St. Lawrence waterway is one of Canada's most valuable transportation assets. A natural westward extension of the important North Atlantic route penetrating some 2,200 miles into the middle of North America, it has been aptly described as a "great highway leading into the heart of the continent". Along this highway came

* Information and statistics dealing with this subject, except for the special article, have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; part of the financial statistics, by the Department of Public Works; shipping subsidies, by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Prepared by Dr. S. Judek (University of Ottawa) of the staff of the Royal Commission on Coasting Trade. Statistical data have been obtained from the following sources: *Canal Statistics*, DBS, Public Finance and Transportation Division; *The Canals of Canada*, Department of Transport; Annual Report of the Lake Carriers' Association, 1954; *Grain Elevators in Canada, 1953-54*, Board of Grain Commissioners. Most of the figures have been rounded.

explorers to open the country, followed later by settlers seeking new rich lands. As the main route of development this waterway linked the early eastern with the later western settlements and provided those settlements with cheap and easy access to European markets.

Throughout Canadian history this water route has continued to play the same vital role—that of providing low-cost water transportation. This will continue to be a fundamental factor in the economic development of the country. Cheap transport facilities are essential to span the long distances separating the various regions of Canada and the St. Lawrence waterway provides such facilities between the industrial areas of eastern Canada and the primary producing areas of western Canada. Furthermore cheap transportation along the St. Lawrence route from the producing areas to the North Atlantic is an equally important factor in Canada's ability to compete in overseas markets. Canada is the fourth trading nation of the world and is dependent on these overseas markets for the sale of many of its exports, grain, minerals, forest products and some manufactures, and for the supply of many imported consumer and producer goods. In addition for some years past a growing proportion of Canada's external trade has been with the United States and in this north-south trade also the St. Lawrence route is of vital significance.

Contiguous to this great waterway are situated six Canadian Provinces and eight States of the United States, a portion of the continent with a heavy concentration of population and one of the greatest industrial areas in the world. The entire area served by the St. Lawrence system accounts roughly for four-fifths of the iron and steel production of the United States and Canada, the same proportion of cereal grains, two-thirds of general manufacturing, one-quarter of the chemical products and of the oil refining. Low-cost water transportation has been a major factor in the development of this concentration of industry.

The volume of traffic on the Great Lakes amounted in 1955 to nearly 200,000,000 net tons (net ton = 2,000 lb.) per annum, all of which must be transported within a navigation season of about 230 days (from the middle of April to the middle of December). About 40,000,000 tons of this total is carried by Canadian ships and most of the remaining 160,000,000 tons by United States vessels. A small amount is carried by ocean-going ships which are able to make their way up the St. Lawrence canals. The annual traffic through the St. Lawrence canals in recent years has amounted to nearly 10,000,000 tons. A great part of the traffic on the Great Lakes and on the St. Lawrence canals consists of bulk commodities of low unit value, the most important being iron ore, grain, coal, forest products and petroleum products.

WATERWAY AND TRANSPORT FACILITIES

From the water level of Lake Superior, the Great Lakes-St. Lawrence inland waterway falls to sea level in five steps: (1) St. Mary's River between Lakes Superior and Huron, with a drop of 21 feet; (2) St. Clair-Detroit passage joining Lake Huron and Lake Erie, with a drop of 8 feet; (3) Welland Canal from Lake Erie to Lake Ontario, with a drop of 326 feet; (4) upper St. Lawrence River from Lake Ontario to Montreal, with a drop of 225 feet; and (5) long passage from Montreal to the sea, with a drop of 20 feet.

Although the numerous rapids and falls between Lake Superior and Montreal are a valuable asset to Canada as a source of hydro-electric power, they have greatly increased the difficulties of navigation on the Great Lakes-St. Lawrence water route. The construction of canals to bypass these obstacles and to improve navigation has proceeded intermittently for more than a century but much still remains to be done. Of the ocean fleet, only small vessels carrying about 1,500 tons can now sail from the Atlantic Ocean to the head of the Lakes. The total volume of traffic on the Great Lakes-St. Lawrence water route is at present limited by the inadequacy of the navigation facilities between Montreal and Lake Ontario, which divides the route as a whole into three sections.

The eastern section of the route is the deep-water section from Montreal to the sea, including the St. Lawrence Ship Channel extending from Montreal to 30 miles below Quebec City. Canadian Government dredges maintain this channel at a depth of 35 feet,

so that most ocean liners can sail safely up to Montreal. The channel is being widened and straightened to provide for increased traffic after the completion of the St. Lawrence Seaway.

In the centre section—the 120 miles between Montreal and Prescott near the foot of Lake Ontario—the governing depth of the channel is 14 feet, which is the depth of the six canals built in this region to bypass various rapids on the St. Lawrence. These canals are: (1) the Lachine Canal, bypassing the Lachine rapids; (2) the Soulanges Canal, bypassing the Cascades, Cedars and Coteau rapids; (3) the Cornwall Canal, bypassing the Long Sault rapids, where Lock 17 limits the size of vessels to 255 feet in length, 43 feet in width and a draught of less than 14 feet; (4) Farran's Point Canal, bypassing the Iroquois rapids; (5) Rapide Plat Canal, bypassing the Cardinal rapids; and (6) Galop Canal, bypassing the Galop rapids. It is this shallow section which prevents most ocean-going vessels from sailing beyond Montreal and which also keeps the large lake freighters on the inland waters of the Great Lakes.

Seaway construction however will improve navigation facilities by providing a channel of minimum 27 foot depth and by replacing the six St. Lawrence canals and 22 locks with three canals and only seven locks. Ocean-going vessels carrying about 9,000 tons and the largest existing 'Great Lakers' carrying bulk cargoes of about 25,000 tons will be able to pass through this section in much less time than is now taken by the smaller vessels. The average time which will be required to go through the locks of the canals on the upward voyage has been estimated at 18.5 hours and on the downbound trip 16.5 hours as compared with the present requirements of 30.7 hours and 23.7 hours respectively. The resulting increase in the carrying capacity of the waterway is obvious as well as the saving in cost.

In the Great Lakes above the St. Lawrence canals, there is a large mercantile fleet of approximately 750 ships flying Canadian or United States flags. Most of these ships are confined to the Great Lakes by the shallow St. Lawrence channels mentioned. Vessels in this section are limited in size by the smallest lock on the Welland Canal which bypasses the Niagara falls and rapids between Lake Ontario and Lake Erie. This lock takes vessels up to 715 feet in length, 75 feet in width with a draught of 25 feet. Larger vessels may trade in the upper Great Lakes passing from Lake Huron to Lake Superior at Sault Ste. Marie by the McArthur Lock. Four smaller locks, one Canadian and three United States, also bypass the rapids at this point. Channels in the upper lakes now provide a depth of 25 feet for upbound traffic and 21 feet downbound.

The number of Canadian flag vessels of 1,000 or more gross tons operating on the upper lakes and through the St. Lawrence canals in November 1955 was as follows:—

CONFINED TO UPPER LAKES			CAPABLE OF PASSING THROUGH ST. LAWRENCE CANALS		
No.	Gross Tonnage	Deadweight Tonnage	No.	Gross Tonnage	Deadweight Tonnage
Dry cargo.....	69	467,453	152	299,509	441,745
Tankers.....	2	25,233	37	71,969	105,200
Passenger.....	5	13,080	—	—	—
TOTALS.....	76	505,766	189	371,478	546,945

It is claimed that the dry bulk cargo ships on the Great Lakes, because of their special design and large carrying capacity, provide the lowest ton-mile transportation cost in the world. Their deadweight capacity ranges from 5,000 to 25,000 tons for the most recent additions to the fleet. With the exception of two self-unloading colliers which carry their own cargo loading equipment, these ships rely on loading and unloading facilities at the ports. Four of the cargo vessels operating on the Great Lakes are package freighters which carry a wide range of general merchandise, including such commodities as farm implements, automobiles and parts, hardware and electrical equipment. Package freight is of high

value in proportion to size and weight. These vessels usually run on regular schedules; they are faster than bulk carriers and a few carry passengers. Rates charged for package freight are under the control of the Board of Transport Commissioners.

Most of the traffic through the St. Lawrence canals from the Great Lakes to points on the lower St. Lawrence is carried in canallers, special vessels whose dimensions are limited by Lock 17 in the Cornwall canal (*see* p. 823). Of the 189 Canadian canallers at present operating, 17 are package freighters, 37 are tankers and 135 are bulk dry cargo carriers. These bulk ships which have a deadweight capacity of between 2,350 and 3,000 tons carry chiefly grain and also other bulk cargoes such as iron ore and coal, sulphur, pulpwood, etc.

In postwar years direct trade between the Great Lakes and overseas countries has shown a steady increase. In 1954 eleven steamship lines operated regular ocean services to and from the Great Lakes, carrying nearly 800,000 tons of freight. In 1955 this trade showed a further increase, with 17 shipping lines operating regular ocean services on the route. Part of this increase may be accounted for by experimental voyages in anticipation of the opening of the Seaway. It is expected that after completion of the Seaway the direct overseas traffic will increase both in volume and in value. At present most of the freight consists of manufactured goods such as iron and steel products, cars, electrical goods, glass, chemicals, clay and earthenware products, etc. In 1954 six cargoes of grain were carried directly to overseas ports.

PORT FACILITIES

Efficient and economical water transportation depends to a large degree on port and harbour facilities, such as docks, wharves, grain elevators, warehouses, loading and unloading equipment, railway connections, drydock accommodations, etc. Present port facilities in the Great Lakes are, on the whole, adequate for the current volume of traffic. Port Arthur and Fort William, twin ports at the head of the Lakes, have a combined total capacity of over 90,000,000 bu. in their grain elevators. Upon completion of the Seaway and the arrival of ocean-going ships at the Lakehead, new loading and unloading facilities may be required.

At Windsor the main docks are owned by private operators and any increase in traffic will probably necessitate additional construction. At Hamilton also the companies engaged in the handling of bulk commodities like coal, steel and iron ore have their own docks and loading and unloading equipment. The Hamilton Harbour Commission plans considerable expenditure on further developments such as the construction of docks and grain elevators, to handle the increased traffic expected after the completion of the Seaway. In Toronto the capacity of the grain elevators is about 4,000,000 bu. and a new warehouse has recently been constructed. Other Great Lakes and river ports where there are grain elevators of considerable capacities include Midland, Collingwood, Port McNicoll, Goderich, Sarnia, Port Colborne, Kingston and Prescott.

In the lower St. Lawrence the most important port is Montreal, where there are excellent facilities for the handling of general cargo. At the present time however there are no facilities for unloading grain from large Lakers which cannot get through the present canals; this situation is being remedied. In addition the loading and unloading facilities of various grain elevators will need further improvement. As at Dec. 31, 1953 the total capacity of grain elevators at Montreal was nearly 16,000,000 bu. Farther down the River Sorel has a modern 3,000,000 bu. grain elevator and Three Rivers has a 5,000,000 bu. elevator but improvements may be required in grain storage and transfer facilities. The Port of Quebec has a grain elevator capacity of 4,000,000 bu. but its facilities for handling general cargo may need improvement. If, after completion of the Seaway, large Lakers were to move as far east as Quebec City, appropriate elevator facilities for unloading such vessels would have to be installed and loading facilities for ocean-going ships increased. At Contrecoeur, a dock has been constructed for transshipping approximately 2,000,000 tons of iron ore a year from Seven Islands to westbound canallers. There are at the present time no facilities at Seven Islands for storing grain and discharging it into ocean-going ships.

FREIGHT TRAFFIC AND SOME COMMODITY MOVEMENTS

As already mentioned most of the freight traffic on the Great Lakes consists of bulk shipments of commodities. The following figures, published by the Lake Carriers' Association, indicate the steady increase since 1900 in the movement of the four most important of these commodities—iron ore, grain, coal and limestone:—

	<i>Net tons</i>		<i>Net tons</i>
1900.....	35,297,624	1940.....	145,216,410
1910.....	80,014,591	1950.....	177,952,946
1920.....	106,518,531	1953.....	199,696,932
1930.....	112,528,927	1954.....	151,297,789

These shipments reached a record level in 1953. The decline of about 48,000,000 tons in 1954 was partly the result of smaller shipments of industrial products, particularly of iron ore, and partly of smaller movements of Canadian wheat and other grains. Of the 151,300,000 tons shipped in 1954, 68,000,000 tons (45 p.c.) were iron ore, 46,000,000 tons (30.5 p.c.) coal, 12,000,000 tons (8 p.c.) grain, and 25,000,000 tons (16.5 p.c.) limestone. Some indication of the movements of these and other commodities is given in the following statistics of freight movements through the canals in the Great Lakes and the St. Lawrence.* These figures however do not include shipments that do not pass through any of the canals. Most of the limestone shipped on the Great Lakes to the steel industries does not pass through the canals and much of the soft coal shipped from Lake Erie goes to other ports on the Great Lakes between the Welland and Sault Ste. Marie Canals.

Tonnages of commodities moving through the Sault Ste. Marie, Welland and St. Lawrence canals in 1954 were as follows:—

	<i>Sault Ste. Marie¹</i>	<i>Welland</i>	<i>St. Lawrence</i>
	(millions of net tons)		
Wheat.....	6.30	2.86	2.37
Other grain.....	4.40	2.45	1.76
Flour.....	0.10	0.02	0.02
Other mill products.....	—	0.01	0.02
Iron ore.....	62.58	2.30	0.30
Pig iron.....	0.22	0.02	—
Manufactured iron and steel.....	0.22	0.15	0.05
Paper.....	—	0.42	0.23
Wood pulp.....	—	0.05	0.04
Pulpwood.....	0.46	0.52	0.50
Lumber.....	—	—	0.03
Anthracite coal.....	0.05	—	0.01
Soft coal and coke.....	7.39	4.98	1.47
Gasoline.....	0.65	0.37	0.12
Other petroleum.....	0.63	1.93	1.00
Sand, gravel and stone.....	1.22	0.17	0.21
All other.....	1.19	1.26	1.51
TOTALS.....	85.41	17.51	9.64

¹ Including U.S. locks.

The above figures include all traffic passing through the canals, that is, traffic to and from all Canadian and American ports in vessels wherever registered. No tolls are levied for passage through the canals, which are currently available to all vessels able to pass through the locks.

Total cargo tonnage passing through the Sault Ste. Marie, Welland and St. Lawrence canals reached a record level in 1953. The 1954 total marks a decline from 1953 of about 30 p.c. to 101,900,000 tons. Approximately 87,000,000 tons of this traffic was downbound, only 14,000,000 tons moving in a westward direction. (Duplications are excluded as far as possible.) The most striking feature of the freight traffic picture is the volume passing through the Sault Ste. Marie canals compared with that going down the River through the St. Lawrence canals. This emphasizes again the difference in the volume

* DBS Canal Statistics.

of traffic on the Great Lakes as compared with that on the St. Lawrence. Traffic through the Sault Ste. Marie canals in the eight month navigation season is greater than that passing in twelve months through the Panama and Suez Canals combined. Most of the traffic at Sault Ste. Marie passes through the four United States locks. Of the total traffic of 85,400,000 net tons in 1954, only 2,600,000 tons passed through the Canadian lock. Noteworthy also is the predominance of iron ore shipments which amounted to more than shipments of all other products through the Sault Ste. Marie canals. Coal and grain, the latter mostly Canadian, accounted for more than 78 p.c. of the remaining traffic.

Nearly 9,000,000 tons of the 17,500,000 tons of through and way traffic on the Welland canal in 1954 passed from United States to Canadian ports. Soft coal (5,000,000 tons) and iron ore (2,000,000 tons) were the chief items. Canadian coastal shipments accounted for 6,000,000 tons of which 4,500,000 tons were grain, and United States coastal trade for about 1,500,000 tons. Canadian shipments to United States ports (mainly paper and wood pulp) totalled under 1,000,000 tons.

Over two-thirds of the traffic on the St. Lawrence canals—6,600,000 tons—consisted of shipments from Canadian ports; those to Canadian ports accounted for 5,700,000 tons of which wheat and grain from the Prairie Provinces made up nearly 4,000,000 tons. Petroleum and gasoline (1,100,000 tons), pulpwood (279,000 tons), paper (219,000 tons) and iron ore (233,000 tons) were the other main items shipped. Most of the remaining traffic was soft coal shipped from the United States to Canada, amounting to 1,400,000 tons; about 800,000 tons were direct overseas shipments and a small amount, 400,000 tons, moved in United States coastal trade.

Movement of Agricultural Products.—Agricultural products such as wheat, barley, corn, oats, rye, flaxseed, flour and other mill products are the most important group of Canadian commodities moving by way of the St. Lawrence system from the Prairies to eastern parts of the country for domestic and export markets. In 1954, out of nearly 12,000,000 net tons total grain movement on the Great Lakes, 10,700,000 tons went through the Sault Ste. Marie canals; of the latter 6,300,000 net tons were wheat and 4,400,000 tons were other grains. Only 2,100,000 net tons of total wheat shipments came from the United States; this moved from Duluth and Superior mainly to flour mills in Buffalo and in smaller quantities to Oswego, Erie and Cleveland.

Thus Canadian shipments of wheat from Fort William and Port Arthur totalled 4,200,000 net tons. Normally almost half of the Canadian wheat from these Lakehead ports is carried in upper lakes bulk freighters to the Georgian Bay and Lake Huron ports of Midland, Port McNicoll, Collingwood, Goderich and Sarnia; about one-quarter goes to Port Colborne and the remainder to Toronto, Kingston and Prescott. All these ports are trans-shipment points. A small quantity moves also to United States Lake Erie ports. From these trans-shipment points, wheat moves by rail to Montreal or by small canallers through the St. Lawrence canals to the ports of Montreal, Sorel, Quebec City and Three Rivers. Grain may also move directly from the Lakehead ports to the lower St. Lawrence ports. From Georgian Bay ports about four-fifths is carried by rail destined to Ontario and beyond, especially to Montreal, Halifax and Saint John, N.B. From the lower lakes and the upper St. Lawrence ports about two-thirds of the wheat received from the West moves on by water to the lower St. Lawrence ports.

The downbound movement of corn through the Welland and St. Lawrence canals comes from western Ontario and the United States. Canadian grains (other than corn and wheat) are shipped from the Prairies through the Sault canals and then by rail. Somewhat more than one-third comes down the St. Lawrence canals. There is only a small traffic in flour through all the canals concerned as this commodity is mainly moved by rail.

Movement of Iron Ore.—Cheap water transportation of iron ore and limestone by way of the Great Lakes has been a major factor in the development of the steel industries of the United States and Canada. The steel mills of the United States are located principally in the area around Lake Erie and south of Lake Michigan and Canadian mills are located

at Hamilton, Welland and Sault Ste. Marie. These industries still rely chiefly on iron ore from the Mesabi Range in Minnesota supplemented by ore from the Steep Rock and Algoma areas in Ontario.

In 1954 the Lake Carriers' Association reported that total shipments of iron ore from ports on the Great Lakes amounted to 68,100,000 net tons. Nearly 97 p.c. of these shipments were from United States ports on Lake Superior (Superior, Two Harbours, Duluth, Escanaba, etc.) and about 3 p.c. from the Canadian ports of Port Arthur and Michipicoten. Most of the iron ore (96 p.c.) went to the United States steel industry—65 p.c. to the Lake Erie ports of Cleveland, Conneaut, Buffalo, Lorain, etc. The Canadian ports of Hamilton, Port Colborne and Sault Ste. Marie received about 4 p.c.

In recent years the output of the best United States Mesabi ore has passed its peak and the cost of producing iron ore has been increasing. The United States steel industry has, therefore, been seeking new sources of ore to supplement and, perhaps later, to supplant the present supply. In 1954 for the first time in United States history, imports of iron ore were substantial, amounting to about 8,000,000 tons—5,000,000 from Venezuela and 3,500,000 from Canada. Most of the supply from Canada came from Ontario but a small amount, about 233,000 tons, came from the Quebec-Labrador area. These shipments mark the beginning of a new pattern in movements of iron ore. The development of the tremendous reserve in the Quebec-Labrador area and the construction of the St. Lawrence Seaway provide the United States and Canadian steel industries with a new source of iron ore, easily accessible and at a cost competitive with the present prices of ore from the Mesabi Range. It is very likely that, in the not too distant future, shipments of iron ore will be the major item of westbound freight up the St. Lawrence. Only a small amount of pig iron passes through the canals. The traffic in iron and steel products is predominantly eastward, and moves mostly by rail.

Movement of Forest Products.—The forest group of commodities includes principally newsprint, wood pulp, pulpwood and lumber. In proportion to the total tonnage of these products moving in Canadian trade, only very small amounts are shipped by the St. Lawrence waterway. Shipments of pulpwood are the most important—each year about half a million tons move downbound through the Sault Ste. Marie canals and about the same volume moves upbound through the St. Lawrence and Welland canals. About half of the pulpwood goes to the United States and the remainder to Thorold, Ont. A substantial proportion of the pulpwood comes from Franqueline, Que., and other places in that Province and in Newfoundland.

Canadian wood pulp, like newsprint, has a substantial market in the United States but most of it moves by rail. Some wood pulp comes from Ontario and some from Quebec moves up through the St. Lawrence canals from Baie Comeau to the Chicago area. Only about 240,000 tons of newsprint passed through the St. Lawrence canals in 1954, mostly to the United States—a small amount compared with the total export of approximately 5,000,000 tons. Lumber transported from British Columbia and the Maritime Provinces, moving into central Canada and the United States, is largely transported by rail; British Columbia lumber also moves eastward via the Panama Canal.

Movement of Coal.—Most of the coal moving on the Great Lakes comes from the United States Lake Erie ports, though a small amount comes from the port of South Chicago. As already stated the greater part of the coal shipments do not go through canals. Of the total 1954 shipments of over 46,000,000 net tons, only about 7,400,000 tons passed through the Sault Ste. Marie canals, of which 1,500,000 net tons went to Canadian ports. About half of the approximately 10,000,000 net tons of coal imported into Canada each year from the United States comes by water. Most of this goes to ports on Lake Erie and Lake Ontario, but only about 1,500,000 net tons passes down the St. Lawrence canals to Quebec. This Province also receives coal, assisted by the Canadian Government freight subvention, from Sydney, N.S., but only a small amount, 95,000 net tons, moves up the St. Lawrence River as far as Cornwall, Ont. There is also a relatively unimportant downbound traffic through the St. Lawrence canals in coke, which originates in the United States.

Movement of Gasoline and Petroleum.—The Ontario ports of Sarnia, Toronto and Port Credit are the major Canadian distributing centres for gasoline and petroleum products in the Great Lakes region, and Montreal is the major distributing centre for the St. Lawrence region. All shipments of gasoline to Fort William and Port Arthur at Lakehead in 1954 were from Canadian ports—almost half from Montreal and the remainder from Toronto and Clarkson, Ont. The St. Lawrence upbound petroleum traffic of 1,000,000 net tons came almost wholly from Trinidad in the British West Indies to Port Credit, Ont., and a small quantity downbound from western Canada.

Between 1950 and 1954 crude oil from Alberta flowed through a pipeline to Superior, Wisconsin, and from there was shipped by tanker mainly to Sarnia, Corunna and Clarkson in Ontario. Since 1954 however when the pipeline was extended from Superior to Sarnia, waterborne shipments of crude oil have declined markedly and only one or two large tankers now operate on the Great Lakes.

Movement of Sand, Gravel and Stone.—These bulk commodities represent low unit value and are usually carried in scows. They constitute a considerable volume of traffic in the Great Lakes area but are of no practical importance on the St. Lawrence as only small amounts move down from the Oka region of Quebec to Montreal.

Movement of other Cargo.—In addition to the commodities specified above, other commodities moving by way of the St. Lawrence system include some bulk commodities such as cement, gypsum, quartzite, fluorspar, sulphur, fertilizers, etc., which are shipped in relatively small quantities, and general merchandise, such as salt, sugar, fish, packaged freight, etc. Cement is shipped from Belleville to Toronto, Ont., and gypsum is carried from the Maritimes to Montreal, where it is trans-shipped and then taken through the St. Lawrence canals to Belleville. Quartzite is moved from the south shores of Lake Huron to Welland and Cornwall. Fluorspar comes up the River from Newfoundland; sulphur is carried from Sorel in Quebec to Cornwall, Hamilton and Thorold in Ontario; fertilizers move mainly by rail but a small quantity moves through the canals from Sorel to Hamilton. Salt is shipped from Windsor and Sarnia to other ports on the Great Lakes, Cornwall and Montreal. Canal movement of cars and car parts is negligible. General merchandise, which consists of miscellaneous goods of varying size and weight, is of high unit value and provides considerable revenue to the shipowners, particularly in the lower St. Lawrence River.

This review of the traffic of commodities on the Great Lakes and through the St. Lawrence canals illustrates the economic importance of this water route to Canada in general and to the provinces adjacent to it in particular. Parallel advantages accrue to the United States. The economic growth of the two countries however is such that the present waterway is inadequate for the steadily increasing traffic. The construction project now under way has been undertaken to alleviate that inadequacy and to provide the facilities that will enable the waterway to perform in the future the role for which it has been designed. The new Seaway will be completed for use in the navigation season of 1959.

Subsection 1.—Shipping

All waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.—Under Part I of the Canada Shipping Act all ships in excess of 10 tons net register are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 h.p. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate established under and subject to the laws of some part of Her Majesty's Dominions and having their principal place of business in those Dominions.

Under the British Commonwealth Merchant Shipping Agreement all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping.

1.—Vessels on the Canadian Shipping Registry by Province as at Dec. 31, 1952-54

NOTE.—Figures for 1935-51 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Shipping Traffic.—Complete statistics of shipping traffic, comparable with those given for the railways, showing all the freight carried by water, are not available. However there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels trading between Canadian and foreign ports. Each vessel visiting a customs port or outport makes a statistical return which is forwarded to the Dominion Bureau of Statistics. Coastwise cargo has been reported from Jan. 1, 1952.

Reports are not made for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently the data are not on the same basis as data for cargo vessels.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also dry docks but these are dealt with separately at p. 835.

5.—Facilities of the Six Principal Harbours as at Dec. 31, 1954

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

¹ Includes a 3,000,000 bu. grain-storage shed connected with the elevator.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver, and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately \$245,000,000. Current operating revenues and expenditures are given in Table 29, pp. 852-853.

Harbour Traffic.—The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded on and unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coasting vessels is larger. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled at all the ports and harbours of Canada because many of them are small and without the staff necessary to maintain detailed records. However the National Harbours Board prepares an annual report of the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are the principal ports of Canada and the cargo handled at each is shown in Table 6. The figures include freight carried by coasting and inland international as well as by sea-going shipping; they include all cargo loaded and unloaded whether by facilities under the jurisdiction of the Board or at private docks and terminals. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are not included.

6.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at each of the Six Principal Ports 1954 with Totals for 1953

NOTE.—Commodities totalling less than 50,000 tons are not listed.

Dry Docks.—The Department of Public Works of the Federal Government operates five dry docks—one at Kingston, Ont., two at Lauzon, Que., and two at Esquimalt, B.C. The dock at Kingston is under lease to the Kingston Shipbuilding Company. The old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934 and, when commercially required, it will be returned to the control of the Department of Public Works. Each of the large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided for use of small vessels; the larger Lauzon dock cost approximately \$4,500,000 and the larger Esquimalt dock approximately \$7,000,000.

¹ Subsidy payments have been completed.

² 28 ft. over blocks.

³ Over sill (H.W.).

Subsection 3.—Canals*

The canals and canalized waters of Canada, under the jurisdiction of the Department of Transport, comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals may be divided into two classes: (1) the main or primary canals on the St. Lawrence River and the Great Lakes, including the Lachine, Soulanges, Cornwall and Williamsburg Canals on the St. Lawrence River, the Welland Ship Canal between Lakes Ontario and Erie, and the Sault Ste. Marie Canal between Lakes Huron and Superior; and (2) subsidiary or secondary canals including the St. Peters Canal between Bras d'Or Lake, Cape Breton and the Atlantic Ocean, the St. Ours and Chambly Canals on the Richelieu River, the Ste. Anne, Carillon and Grenville Canals on the Ottawa River, the Rideau Canal between the Ottawa River and Lake Ontario and the Trent and Murray Canals between Lake Ontario and Georgian Bay.

During 1954, 30,070,701 tons of freight and 25,292 vessels passed through the canals as compared with 33,373,064 tons of freight and 27,563 vessels during the peak year 1953. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1954 carried 115,014 passengers as compared with 105,366 in 1953.

* A special article on the Canals of the St. Lawrence Waterway appears in the 1954 Year Book, pp. 830-833.

Revenue from canals during the year ended Mar. 31, 1955 amounted to \$1,599,329 of which \$1,144,083 was derived from rentals for hydraulic and land privileges and wharfage. In the previous fiscal year the total revenue was \$1,594,891 with rentals and wharfage amounting to \$1,237,648.

The canals under the jurisdiction of the Department of Transport are listed, with their locations, lengths and lock complement in Table 9. In addition to these the Federal Department of Public Works administers the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 feet) at Selkirk, Man., on the Red River, and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

9.—Lengths of Channels and Dimensions of Locks under the Control of the Department of Transport as at Mar. 31, 1954

¹ Figures for the United States include small amounts of traffic from other foreign countries.

The figures in Tables 11 and 12 include duplications where the same freight passes through two or more canals, but in Table 13 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

Totals, Canal Traffic.....	13,964,044	95,943,092	109,907,136

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available. Canal traffic has varied from 20,484,000 tons in 1932, which was less than the Panama traffic, to 109,907,136 tons in 1954. The dominant traffic from a tonnage aspect is iron ore which has fluctuated from a low of 3,607,000 tons in 1932 to a high of 98,657,591 tons in 1953. The 1954 tonnage was 62,583,469.

Soft coal has usually been second in volume to iron ore, increasing from 8,676,297 tons during the 1949 season to 13,301,048 tons in 1950; succeeding years brought declines to 8,609,598 tons in 1953 and 7,397,623 tons in 1954.

Although wheat ranks third in tonnage, its value over the past quarter-century has been greater generally than that of either iron ore or coal. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

The Panama Canal.—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to the ports of British Columbia, from which vessels leave direct for United Kingdom and other European ports throughout the year. As an alternative route to that of the transcontinental railway lines this water passage is of vital importance in the solution of the larger transportation problems of the Continent. During World War I the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However with the postwar decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. During World War II the volume of Canadian traffic through the Canal was again reduced but has since increased considerably.

Subsection 4.—Aids to Navigation

Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition a pilotage service is maintained in waters where navigation is difficult; this service is described under Marine Services at p. 843. A further aid to safe navigation is found

in the chains of radio signal and direction-finding stations described under radiotelegraphy at p. 883. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

16.—Marine Danger Signals maintained in Canada, Years Ended Mar. 31, 1949-55

NOTE.—In addition to the aids to navigation listed, approximately 9,300 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Type of Signal	1949	1950	1951	1952	1953	1954	1955

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over—particularly in connection with sea-going shipping from Montreal, Que.—and to prevent flood conditions during the spring ice break-up.

St. Lawrence River Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles. About 113 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points and additional anchorage and turning areas. This section comprises about 100 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 13 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Maintenance requirements owing to silting in this dredged channel are relatively minor above Quebec but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys, and the centre by range lights permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, and to alleviate flood conditions in low lying areas.

17.—Seasons of Open Navigation on the St. Lawrence Ship Channel 1936-55

NOTE.—Figures from 1882 are given in the corresponding table of previous Year Books, beginning with the 1934-35 edition.

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection deal with steamship inspection, pilotage service, sea-faring personnel and the operations of the Canadian National (West Indies) Steamships Limited.

Steamship Inspection.—The Steamship Inspection Service, provided for under Part VII of the Canada Shipping Act 1934, is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers. The Service has a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports.

The Board of Steamship Inspection decides on questions arising out of the administration of the Act and takes care of the interests of the Federal Government in schools for marine engineers. A matter of recent concern has been the pollution of the sea by oil, and an international conference of the world's leading maritime nations, at which Canada was represented by the Chairman of the Board of Steamship Inspection, was held at London, England, in April 1954 for the purpose of deciding on measures to deal with this problem. A Convention was drawn up at the Conference and signed by the Canadian delegate, subject to ratification by the Canadian Government.

Pilotage.—Pilotage service functions under the provisions of Part VI of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 42 pilotage districts in nine of which the Minister of Transport is the pilotage authority (see Table 19); in each of the other districts the authority is a local body appointed by the Governor in Council.

19.—Pilotage Service by Districts, Years Ended Mar. 31, 1953 and 1954

In addition there are 21 districts in Newfoundland under local pilotage authority. These districts are administered under Newfoundland statutes which, since the date of union with Canada, come under federal jurisdiction. Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Seamen Engaged and Discharged.—Seamen engaged and discharged at Canadian ports under the provisions of the Canada Shipping Act during the years ended Mar. 31, 1945-54 are shown in Table 20.

20.—Seamen Engaged and Discharged at Canadian Ports, Years Ended Mar. 31, 1945-54

NOTE.—Figures from 1918 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Canadian National (West Indies) Steamships Limited.— In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

At the end of 1954 the Canadian National Steamships owned and operated eight vessels in service between Canada and the British West Indies.

21.—Financial Statistics of Canadian National (West Indies) Steamships Limited 1945-54

NOTE.—Figures for the years 1929-38 are given in the 1942 Year Book, p. 620, and for 1939-44 in the 1950 edition, p. 777.

Subsection 6.—The St. Lawrence Seaway

The St. Lawrence Seaway and the St. Lawrence Power Project were given special treatment in separate articles in the 1955 Year Book, at pp. 885-888 and 549-553 respectively. The following material, giving a brief look at the Seaway project as at the beginning of May 1956, has been extracted from the St. Lawrence Seaway Authority releases.

A little over a year from the time the first blast was set off marking the beginning of work for excavation of 7,600 feet of the Seaway channel and construction of protecting dyke on the south shore of the St. Lawrence River near Montreal, construction contracts valued at nearly \$80,000,000 had been awarded by the St. Lawrence Seaway Authority. The total cost of works undertaken by Canada for Seaway navigation is estimated at approximately \$200,000,000, and that for the United States at about \$100,000,000.

Of the Canadian total, \$122,000,000 in contracts will be awarded in the Lachine Section, for it is there that the major construction works for Seaway navigation facilities will be brought into being.

At present the navigation picture is as follows: (1) from the Gulf of St. Lawrence to Montreal, a distance of 1,000 miles, controlling navigation channels are 35 feet in depth; (2) from Montreal to Lake Ontario, a distance of 180 miles, controlling navigation channels are 14 feet; (3) from Lake Ontario to Lake Erie, a distance of 200 miles, controlling navigation channels are 25 feet; (4) from Lake Erie to the head of the Lakes, a distance of 970 miles, controlling navigation channels are 25 feet downbound and 21 feet upbound.

Between the highly developed inland route through the Great Lakes which has a minimum channel depth of 21 feet and the ocean port facilities of Montreal lies the 114 mile International section of the St. Lawrence River navigable only through a chain of outmoded 14 foot canals capable of handling ships with a maximum capacity of but 3,000 tons. The Seaway project is basically designed to break this bottleneck and to extend deepsea facilities into the heart of industrial North America.

For practical purposes the Seaway has been divided, from Lake Ontario to the Port of Montreal, into five sections: (1) the Thousand Islands section; (2) the International Rapids section; (3) the Lake St. Francis section; (4) the Soulanges section; and (5) the Lachine section. To these may be added a sixth section—from the Welland Canal to Lake Erie. The progress in each of these six sections is given briefly in the following paragraphs.

Thousand Islands Section.—A small amount of dredging is necessary at an approximate cost of \$2,500,000; this work is to be undertaken by the United States.

International Rapids Section.—This key section is in international territory and here \$600,000,000 will be spent, the greater part of it for hydro power installations undertaken jointly by The Hydro-Electric Power Commission of Ontario and the Power Authority of the State of New York. The project consists of: (1) A dam in the Long Sault Rapids and two powerhouses a short distance below the rapids, one on the Canadian side and one on the American side, each capable of developing 1,100,000 h.p. This dam will flood communities on both sides of the River—on the Canadian side for a distance of approximately thirty miles by a width of one to three or four miles. (2) A control dam near Iroquois Point to control the level of the pool and to protect the downriver interests at Montreal. (3) Side canals on the United States mainland to carry navigation around the Long Sault dam and a side canal on the Canadian side to circumnavigate the control dam at Iroquois. (4) Dykes where necessary. The average elevation along the front from Cornwall to Prescott, now 220 feet above sea level, will be raised to between 238 to 242 feet. Therefore when work has been completed 20,000 acres of land will have been flooded, two towns and six villages will have disappeared and 6,500 persons will be established in entirely new towns now rising along the projected shoreline.

The Canadian share in the work in the International section at the present time is the construction, by the St. Lawrence Seaway Authority, of a canal and lock at Iroquois required to bypass the control dam. Work has now been going on for over a year and 40 p.c. of the excavation has been completed. The work is slightly behind schedule. Also near Cornwall, Canada is co-operating with the United States in the construction of a combined railway and highway bridge across the international channel of the St. Lawrence River at Polleys Gut.

Lake St. Francis Section.—In the Lake St. Francis section which includes about 15 miles of river, dredging will be undertaken in three locations at a total cost of \$6,000,000 for the purpose of deepening the channels in these locations to a depth of 27 feet. Thirty per cent of the excavation has been completed and the work is ahead of schedule.

Soulanges Section.—The Soulanges section covers that portion of the River between the upper end of Lake St. Louis and the lower end of Lake St. Francis. The work to be done includes the construction of two locks separated by a three-quarter-mile intermediate

pool and three lift bridges. No. 3 Highway which follows the shore of Lake St. Louis will be carried under the lower lock in a four-lane divided tunnel. A contract has been awarded for the excavation for the main highway diversion tunnel; the Lake St. Louis cofferdam, and the excavation for the Seaway channel and work is getting under way.

Lachine Section.—The Lachine section, covering the reach from Lake St. Louis to Montreal Harbour, is the most costly and most complicated part of the whole Seaway in Canadian territory. Here will be built a 16 mile canal with considerable channel enlargement extending from above Caughnawaga in Lake St. Louis to the entrance to Montreal Harbour. Two locks will be built, one at St. Lambert near Victoria Bridge, the other at Côte Ste. Catherine opposite the Lachine rapids. Three turning basins will be constructed, one in Montreal Harbour and two in Laprairie Basin, to permit the free movement of ships. Four major rail and highway bridges across the St. Lawrence in the Montreal region will have to be modified to provide a minimum of 120 foot clearance over the channel.

Construction is actively under way in this whole area. Nine general contracts amounting to \$45,000,000 have been let and only three others are required to complete the Lachine section. Progress is well ahead of schedule. At the start of this second year of construction work on the Seaway the Lachine section is roughly 10 p.c. completed by dollar value, with two and a half years to go.

Welland Section.—Improvements in the Welland Ship Canal will extend the 27 foot passage into Lake Erie. With its seven locks, 859 feet long, 80 feet wide and 30 feet over the sills, 27 foot navigation is already provided for 17 of its 28 miles. Three excavation contracts have been let and two of them have been completed. Three additional dredging contracts required to finish the work in the Welland section can be performed without interruption of traffic movement.

As the 1956 navigation season opens, the pace of construction steps up. Men and machines are busy night and day on land and water from the harbour of Montreal to the eastern reaches of Lake Ontario and in the Welland district, working toward the completion of this great project by 1958. It will then be possible for large lake carriers to go down to Montreal and for ocean-going vessels to voyage inland to such important lake ports as Toronto, Hamilton, Buffalo, Cleveland, Toledo, Detroit, Chicago and the lakehead ports of Duluth, Superior, Fort William and Port Arthur. The benefits to be derived from adequate navigation and power have unlimited ramifications, not only regional but national and international, which will be reflected in lower unit prices for goods, more purchasing power, development of secondary industry as well as a busier economy and more traffic of every kind throughout Canada and much of the United States.

Section 2.—Financial Statistics of Waterways

The principal statistics available of the cost of water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure is confined almost entirely to terminal or dockage facilities. On the other hand investment in shipping has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those compiled from the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance. It must be realized that

such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works which have been superseded, as for instance, in the first Welland Canals. To this extent such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Table 22 shows that capital expenditure on canals, marine services and miscellaneous water-transport facilities reached the grand total of \$441,853,124 by the end of March 1954, but this must be interpreted with the above qualifications in mind. In Table 23 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1953 and 1954, and are in addition to the capital expenditure of Table 22. Figures in Table 23 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 22 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore more nearly approach the present value of the properties under the administration of the National Harbours Board.

22.—Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities as at Mar. 31, 1953 and 1954

NOTE.—Compiled from annual reports of the Department of Transport and the *Public Accounts*.

Waterway Expenditure and Revenue on Consolidated Fund Account.—

Expenditure under this heading (Tables 25 to 27) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 28.

To facilitate water transportation, the Federal Government expends annually in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board and for mail subsidies and steamship subventions as shown in Table 30. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 29.

PART V.—CIVIL AIR TRANSPORTATION*

Section 1.—Administration and Development

Historical Developments.—Canada's aviation history dates back to 1909 when the *Silver Dart*, piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia), flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in Canada until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and intercity air services. During this period the flying clubs movement received government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War many Service-trained Canadian airmen turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services were inaugurated by the Department of Transport during the War and were turned over to Trans-Canada Air Lines which had come into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949 the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada. Service to Mexico and South America was inaugurated in 1953. Current operations of TCA and CPA are covered on pp. 855-857.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the regulation of commercial air services. Part III deals with matters of government internal administration in connection with the Act.

* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXVIII, Defence of Canada.

Weather Services.—Weather services are provided by the Meteorological Division of the Department of Transport to meet the increasing demands of aviation, agriculture, industry and the general public. The expanding weather services required by the Department of National Defence are a major responsibility of the Division, both in Canada and with Canadian Armed Forces abroad. In 1955 a Central Analysis Office was operated in Montreal together with 47 forecast offices across Canada and four in Europe. Forecast offices are linked by teletype, radio teletype and a national facsimile system. As of July 1, 1955 the Division maintained 246 synoptic stations taking six-hourly observations, a network of 32 radiosonde stations (including five in the extreme Arctic operated jointly with the United States) taking upper air soundings and 69 stations recording upper winds. In addition there were in operation 1,228 climatological stations. One ocean weather station taking weather observations every three hours in the Pacific, 1,000 miles west of Vancouver, is maintained under international agreement.

Air Industries and Transport Association.—Commercial flying schools, which are members of the Air Industries and Transport Association, numbered 45 at the end of 1954. During 1954 the number of students instructed and graduated as private pilots was 567, the number graduated as commercial pilots was 86, and the number of instructional hours flown was 38,999.

Royal Canadian Flying Clubs.—At the end of 1954 there were 37 flying clubs connected with the Royal Canadian Flying Clubs Association. The total membership was 7,588 and the aircraft available for instructional purposes numbered 168. During the year 1,002 students were instructed and graduated as private pilots and 97 as commercial pilots. Instructional hours of flying totalled 74,856.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has its headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appeared in the 1952-53 Year Book, pp. 820-827.

In recent years Canada has been a signatory to agreements concerning civil aviation with Australia and New Zealand; Belgium, Denmark, France, Ireland, Japan, Mexico, the Netherlands, Norway, Peru, Portugal, Sweden and with the United Kingdom and the United States.

Section 2.—Air Services

Air Transport Services.—These services are grouped into two broad classes—Scheduled Services and Non-scheduled Services. The first group provides regular point-to-point service on scheduled advertised routes and the second group includes:—

- (1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
- (2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
- (3) Contract Air Services which operate on one or more specific contracts—these do not operate on a time schedule nor need the contractor take the entire space of the aircraft; and
- (4) Specialty Air Services concerned with large scale forestry and utility surveys according to some specific agreement.

Trans-Canada Air Lines.—During 1954 TCA provided air transportation for 1,438,349 passengers and carried 16,741,568 lb. of freight and 4,762,763 lb. of express over its North American and international routes. Passenger traffic increased 10 p.c. over 1953 and in performing its services TCA flew 15 p.c. more revenue ton-miles. Staff at Dec. 31, 1954 numbered 7,991.

Super-constellation service was introduced by TCA for the first time on transatlantic routes and transcontinentally in 1954. The transatlantic service includes first class and tourist accommodation. Also in 1954 TCA took delivery of its first propeller-turbine

Viscount. This service was inaugurated on scheduled routes on Apr. 1, 1955, establishing the first propeller-turbine service by any commercial airline in North America. Twenty-five *Viscounts* were purchased, 14 of which were delivered and put into operation in 1955.

TCA provides service for passengers, mail and commodity traffic over routes totalling 24,016 miles and serves, in addition to country wide Canadian centres, the United States, England, Scotland, Ireland, France, Germany, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. In the autumn of 1955 an exchange of routes gave TCA services into Quebec and northern Ontario and gave Canadian Pacific Air Lines service to Mexico City.

Canadian Pacific Air Lines Limited.—CPA operates scheduled domestic services over a total of 9,354 route miles. Overseas routes operate from Vancouver to Australia, New Zealand, Honolulu and Fiji on the South Pacific service. The North Pacific serves Tokyo and Hong Kong via the Great Circle route through the Aleutian Islands. Non-stop flights are made from Vancouver to Mexico City and onward to Lima, Peru, and a Polar route from Vancouver to Amsterdam was opened in 1955 with excellent traffic reported on all flights.

In September 1955 CPA took over the Trans-Canada Air Lines Mexico City route in exchange for certain Ontario and Quebec domestic routes formerly operated by CPA. The addition of the Mexico route brought CPA's overseas total to 27,610 miles. Thus its domestic and overseas routes now total 36,964 miles, making CPA the sixth largest carrier in the world airline group.

Domestic routes are flown by *DC-4*, *DC-3* and *Convair 240* aircraft. *DC-6B*'s are used on all overseas routes and orders have been placed for a number of *Bristol Britannia* propeller-turbine airliners, the first of which will be delivered in 1957.

In 1954 CPA flew 198,803,192 revenue passenger-miles and 2,261,920 revenue goods ton-miles and carried 246,965 revenue passengers and 2,983,331 lb. of mail.

Independent Air Lines.—In addition to Trans-Canada Air Lines and Canadian Pacific Airlines Limited, there are four other domestic air lines licensed to operate scheduled services in Canada—Central Northern Airways Limited, Winnipeg, Man., Maritime Central Airways Limited, Charlottetown, P.E.I., Queen Charlotte Airlines Limited, Vancouver, B.C., and Quebecair Incorporated, Mont Joli, Que.

Licensed domestic air carriers operating in Canada held valid operating certificates at Dec. 31, 1954 covering 39 scheduled, 90 flying training and 602 non-scheduled and specialty commercial air services. Non-scheduled services are operated by the majority of the independent airlines. These services provide effective access to sections of Canada that are inaccessible by other means of transportation and act as feeders to the scheduled air lines. They also provide specialty services such as recreational flying, aerial photography and surveying, aerial pest control and aerial advertising.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of December 1954 there were 15 Commonwealth and foreign air carriers holding a total of 19 valid operating certificates covering international scheduled commercial air services operating into Canada, as follows:—

Air France (Compagnie Nationale Air France) operates between points in Metropolitan France and Montreal, Que., Canada, direct or via Shannon, Ireland, Keflavik, Iceland, or the Azores and Gander, Nfld., Canada; and New York, N.Y., and Chicago, Ill., U.S.A.

Airwork Limited operates on the Canadian portion of the route between points abroad and New York, N.Y., U.S.A., serving Gander, Nfld., Canada, and Montreal, Que., Canada, via designated airways and air routes.

American Airlines, Inc. operates between Toronto, Ont., Canada, and New York, N.Y., Newark, N.J., U.S.A., direct or via Buffalo, N.Y., U.S.A.

British Overseas Airways Corp. operates between London, England, and Montreal, Que., Canada, and between London, England, and New York, N.Y., U.S.A., both routes via Prestwick, Scotland, or Shannon, Ireland, and Gander, Nfld., Canada; and between London, England, Gander, Nfld., Canada, and Bermuda.

Colonial Airlines, Inc. operates (a) between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and New York, N.Y., U.S.A., via Burlington, Vt., U.S.A., and (b) between the terminals, Ottawa, Ont., Canada and Montreal, Que., Canada, and Washington, D.C., U.S.A., via Massena, N.Y., and/or Syracuse, N.Y., U.S.A.

KLM Royal Dutch Airlines operates on the Canadian portion of the route between the terminals Amsterdam, Netherlands, and Montreal, Que., Canada; and on the Canadian portion of the route between the terminals Montreal, Que., Canada and Willemstad, Curaçao, Netherlands Antilles.

Northeast Airlines, Inc. operates between Montreal, Que., Canada, and Boston, Mass., U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt., (Lebanon Airport, N.H.) and Concord, N.H., U.S.A.

Northwest Airlines, Inc. operates between Winnipeg, Man., Canada, and Fargo, N.D., U.S.A., and between Minneapolis/St. Paul, Minn., U.S.A., Edmonton, Alta., Canada, Anchorage, Alaska, U.S.A., and beyond.

Pan American World Airways Inc. operates on the Canadian portion of the air route between Seattle, Wash., and Fairbanks, Alaska, and with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada; also on the Canadian portion of the route between U.S.A., Gander, Nfld., Canada and Europe.

Air Traffic Control.—The primary functions of Air Traffic Control Service of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through provision of airport control, approach control and area control services, together with flight information, alerting for search and rescue, customs notification and aircraft identification. These services are described as follows:—

Airport Control is designed particularly to provide air-traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, together with weather conditions and other factors, indicate its need in the interest of safety. The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport. Control is effected by means of direct radio-telephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports. The control towers are located at Patricia Bay and Vancouver, B.C.; Lethbridge, Calgary and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; Lakehead, Windsor, London, Toronto, Toronto Island, Ottawa and North Bay, Ont.; Montreal, Cartierville, Quebec and Seven Islands, Que.; Moncton, N.B.; Sydney, N.S.; and Gander, Nfld. Most of these control towers are in continuous operation but a few provide 16 hour daily service only.

Approach Control is provided by the North Bay and Ottawa approach control towers. This service is in addition to the regular airport control service provided at these locations. Approach control service consists of the provision of standard IFR separation to aircraft operating in accordance with the Instrument Flight Rules within the local approach control area of the airport.

Area Control is designed particularly to provide air-traffic control service to aircraft operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Gander, Nfld. Each centre is connected with the control towers, radio range stations and operations offices within its area by means of an extensive system of local and long-line interphone or radio circuits and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Gander area control centre provides this service within the airspace over approximately one-half of the North Atlantic Ocean. Area control service is provided for approximately 15,000 miles of airways, air routes and control channels.

Flight Information provides advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. Such service is provided by all air-traffic control units but particularly by the seven area control centres—one to a region.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to assist such organizations, as required. Area control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services Branch of this Department or directly with one of the area control centres or control towers.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the United States-Canada boundary. The Air-Traffic Control communications system and units connected therewith forward pilot requests to notify the customs officer at the airport of destination.

Aircraft Identification Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

Air Traffic Control employs 174 airport controllers, 94 area controllers, 14 approach controllers, 75 air-traffic control assistants and a headquarters staff of nine—a total of 366 persons—and operates 22 airport control towers and seven area control centres. The number of controlled operations in Canada during 1954 was 1,693,133, an increase of 9.6 p.c. over the preceding year. Of this total 73.5 p.c. represented civil and 26.5 p.c. military operations.

Summary of Operation Statistics.—The statistics given in Table 4 show the steady increase in recent years in passenger, freight and mail traffic.

4.—Summary Statistics of Civil Aviation 1950-54

NOTE.—Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1924 edition.

Table 5 shows civil aviation figures for 1954 by type of service. A definition of scheduled and non-scheduled carriers is given on p. 855. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "international" and "Canadian" but duplications are excluded from the totals.

PART VI.—OIL AND GAS PIPELINES*

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Information included at pp. 910-911 of the 1955 edition and in the following Section brings pipeline development up to mid-1955.

Section 1.—Pipeline Developments

Prairie crude oil is delivered by pipeline to Ontario and to the Pacific Coast by two great pipeline systems which had their first full year of operation in 1954.

In 1950 the Interprovincial Pipe Line Company constructed its first east-bound pipeline from Edmonton, Alta., to Superior, Wis., U.S.A. Three years later the line was extended 643 miles to Sarnia, Ont., and a loop was added between Regina, Sask., and Gretna, Man. This is the longest pipeline in the world, the route from Edmonton to Sarnia being 1,765 miles in length. During 1954 the system's capacity was enlarged by

* Prepared under the direction of Dr. G. S. Hume, Acting Deputy Minister, Department of Mines and Technical Surveys, by R. B. Toombs, Petroleum Engineer of the Mineral Resources Division.

adding 455 miles of 24 inch diameter pipe in loops parallel to the original line in Canada and 196 miles of 26 inch loop in the United States. In addition a new pumping station was built, eight other pumping stations were enlarged and storage tank facilities of approximately 862,000 bbl. capacity were installed. The total investment in the Interprovincial pipeline system at the end of 1954 was \$224,000,000.

The Interprovincial system in 1955 had daily pumping facilities of 217,000 bbl. between Edmonton and Regina, 193,000 bbl. between Regina and Gretna, 163,000 bbl. between Gretna and Superior, and 147,000 bbl. between Superior and Sarnia. The latter two sections of the system are operated by the Lakehead Pipe Line Company Incorporated, a United States subsidiary of the Interprovincial Pipe Line Company. Pipeline receipts of oil in 1954 totalled 67,600,000 bbl., a 25 p.c. increase over 1953. By mid-1955 the system was receiving 250,000 bbl. daily and deliveries of Prairie crude oil were being made either directly or by spur lines to refineries at Saskatoon, Moose Jaw and Regina in Saskatchewan, Brandon and Winnipeg in Manitoba, Wrenshall, Minn., Superior, Wis., and Sarnia, Ont. From Sarnia some crude oil was moving to refineries at Toronto and Port Credit by lake tanker. In addition, Saskatchewan crude oil from the Swift Current area commenced to move to St. Paul, Minn., via the Interprovincial pipeline and two other lines. Cost of transporting oil from the main Alberta collecting point at Edmonton to Regina is 23½ cents, to Gretna 36 cents, to Superior 44 cents and to Sarnia 64 cents.

Trans Mountain Pipe Line Company Limited completed its 718 mile, 24 inch diameter line between Edmonton and Vancouver in October 1953. During 1954 a 24 mile spur line of 20 inch and 16 inch diameter pipe was constructed from Sumas, B.C., across the International Boundary to Ferndale, Wash., where the General Petroleum Corporation completed its new refinery in October of that year. In 1955 this spur line was extended 36 miles southwestward to the new Shell Oil Company refinery at Anacortes. The Trans Mountain pipeline has installed pumping capacity of 150,000 bbl. daily within four pumping stations; provision for the addition of ten more stations allows for an ultimate daily capacity of 300,000 bbl.

Six major feeder lines supply the Trans Mountain system with Alberta crude oil at Edmonton. Oil is delivered to one refinery at Kamloops, B.C., three near Vancouver, and two in the State of Washington. The 1954 daily average crude oil deliveries amounting to 39,787 bbl. had increased to 70,000 bbl. by mid-1955 and further increases were anticipated. The pipeline tariff per barrel from Edmonton to Vancouver is 45 cents.

Construction work continued on Canada's oil gathering lines which supply the two large cross-country systems. Late in 1954 Pembina Pipe Line Company Limited completed a 72 mile, 16 inch diameter transmission line from a pumping station location near the town of Drayton Valley, Alta., to Edmonton to take delivery of oil from Pembina oil field. Its initial capacity is 115,000 bbl. daily. A gathering system in the Pembina field is being enlarged as new wells are drilled and eventually will collect oil from as many as 4,000 wells. Daily deliveries of the Pembina pipeline averaging less than 10,000 bbl. in 1954 were nearing the 40,000 bbl. mark by mid-1955 and greater increases were anticipated. During 1955 a 106 mile pipeline of 57,000 bbl. daily capacity was built from Sturgeon Lake oil field southward to the Trans Mountain pipeline at Edson, Alta. Canadian Gulf Pipe Line Company constructed a 36 mile line to link the Joffre and Clive oil fields to the main line near Stettler, Alta. The main line takes delivery of oil from Big Valley, Stettler and other fields along a 136 mile trunk line route between Big Valley field and Edmonton.

In Saskatchewan, South Saskatchewan Pipe Line Company constructed a 158 mile, 16 inch diameter pipeline in 1954 from Cantuar, near Swift Current, to Regina for the purpose of transporting medium-gravity crude oil from the Fosterton-Cantuar-Success group of fields to the Interprovincial pipeline. The crude is then transported via the Interprovincial pipeline to Clearwater, Minn., where another new pipeline transports it southward to a refinery near St. Paul, Minn. Present capacity of the \$10,000,000 South Saskatchewan pipeline is 20,000 bbl. daily. Oil shipments were started in June 1955.

The pipeline tariff to St. Paul is 77 cents a bbl. which permits the marketing of Saskatchewan medium-gravity crude oil in the industrial St. Paul area at prices competitive with crude oil produced in the Wyoming fields. The Smiley light gravity oil field in central Saskatchewan was also linked in 1954 to the Interprovincial pipeline by a 30 mile line of 12,000 bbl. daily capacity from the field to the town of Ermine.

In Manitoba a pipeline system was constructed in 1954 to connect the Virden area oil fields with the Interprovincial pipeline at Cromer. Twenty-five miles of transmission line and several miles of gathering line were laid. The system is being expanded as new fields are developed and Manitoba crude oil is thereby finding ready access to market. In Ontario, Imperial Oil Limited raised the capacity of its 195 mile Sarnia Products Pipe Line from 37,000 to 55,000 bbl. daily. A large oil products pipeline was constructed in 1954 over a 625 mile route from Haines to Fairbanks, Alaska. This 8 inch diameter line crosses 293 miles of Canadian territory in British Columbia and the Yukon.

Although Canada's oil pipeline systems have grown rapidly during the past five years and are now adequate for some time to come, pipeline systems planned for the eastward and westward transportation of Alberta and British Columbia gas had not entered the construction stages by mid-1955. Trans-Canada Pipe Lines, Limited received a permit in 1954 from the Alberta Government to export gas at the maximum rate of 540,000 M cu. ft. per day up to a total of 4,350,000,000 M cu. ft. over a 27 year period and in the same year a Federal Government permit was granted to move Alberta natural gas across Canada to eastern markets. Each permit is subject to the establishment of proof that the project can be financed.

In October 1954 a 76 mile, 20 inch diameter gas pipeline was built from Niagara River to Toronto to connect facilities of the Tennessee Gas Transmission Company at the International Boundary with the Toronto distribution system of Consumers' Gas Company. Natural gas deliveries commenced early in 1955.

Westcoast Transmission Company Limited, which had received Canadian approval to construct a pipeline for delivery of Peace River natural gas to Vancouver and United States markets in 1952, failed to gain access to the American markets in a June 1954 hearing before the Federal Power Commission in Washington. Late in 1954 the Company signed an agreement with Pacific Northwest Pipe Line Corporation, which in June had been given the Pacific Northwest States market franchise. The agreement would permit initial deliveries of 300,000,000 cu.ft. of Peace River area gas to the American company's facilities at the International Boundary. In addition Westcoast would make initial daily deliveries of up to 50,000,000 cu.ft. to Vancouver and nearby Fraser Valley communities. During 1955 United States approval of this agreement was being sought, and Westcoast was continuing with preparations for its 650 mile, 30 inch diameter main line and 223 mile gathering system.

In Alberta, Northwestern Utilities, Limited, which supplies natural gas to Edmonton and most towns north of Red Deer, constructed pipelines from two more fields in 1954, bringing its total source fields to seven. A 40 mile, 12 inch diameter line was laid from the Bonnie Glen-Wizard Lake area to Edmonton to provide for the transportation of 15,000,000 cu.ft. of natural gas daily. The Company also tied the Acheson field to its system at Edmonton by the construction of a 6 mile, 6 inch diameter line of 3,000,000 cu.ft. daily capacity. Enlargement and improvement of the Canadian Western Natural Gas Company Limited system serving Calgary and southern Alberta was also under way in 1954 and 1955. These two integrated pipeline systems can together meet daily demands in the order of 500,000,000 cu.ft.

Saskatchewan Power Corporation completed a 101 mile gas pipeline between Brock gas field and Saskatoon in 1953 and in 1954 tied the Brock and Coleville gas fields together with a 30 mile pipeline. In 1955 the Corporation constructed a 116 mile direct line from Coleville field to Saskatoon and a 110 mile line from Saskatoon to Prince Albert. This 1953-55 construction program has provided natural gas service to Saskatoon and Prince Albert and a number of communities in north-central Saskatchewan.

Section 2.—Oil Pipeline Statistics*

There were 23 oil pipelines operating in Canada at Dec. 31, 1954. Pipeline construction programs during 1954 raised the total mileage of Canada's oil pipeline system to 4,656, compared with 3,794 miles at the end of 1953.

Pipeline deliveries shown in Table 1 are made to non-pipeline carriers, foreign pipelines and terminals including refineries and distributing centres. Comparative statistics for years before 1950 are not available but deliveries were relatively small as the system of the Interprovincial Pipe Line Company did not go into operation until the latter part of 1950. Net gathering-system deliveries in Alberta fell sharply after the opening of the Interprovincial system because the new trunk line carried most of the oil formerly moved eastward in railway tank cars. Starting January 1953 the Imperial Pipe Line Company reported operations in Alberta as a gathering system only and for this reason Alberta gathering and trunk deliveries for 1953 are not strictly comparable with those for previous years.

* Statistics of oil pipelines are given in greater detail in the DBS monthly report, *Pipe Lines (Oil) Statistics*.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF COMMUNICATION*

The development and control of radio communication in Canada from the beginning of the century is outlined in the 1945 Year Book, pp. 644-647.

The present phase of national radio broadcasting in Canada was entered upon in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations and the authority to make regulations for the control of any equipment liable to cause interference with radio reception.

Except for those matters covered by the Canadian Broadcasting Act, radio communications are now regulated under the Radio Act and Regulations. In addition all radio communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto and in accordance with such regional agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council dated June 8, 1948 responsibility for telegraph and telephone services formerly operated by the federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communication for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

* Revised in the Telecommunications Division, Department of Transport, Ottawa.

A Crown company, Canadian Overseas Telecommunication Corporation, was created by Act of Parliament (Dec. 10, 1949) to acquire for public operation certain external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth.

Land line telegraph and telephone tariffs and tolls charged by companies incorporated by the Federal Government are regulated by the Board of Transport Commissioners under the provisions of the Railway Act. Similarly tariffs and tolls charged to the public by individuals or companies for radio telephone communications within Canada are regulated by the Board of Transport Commissioners under the provisions of the Railway Act and the Regulations made under the Radio Act.

PART II.—WIRE COMMUNICATIONS*

Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given in the 1934-35 Year Book, p. 778.

Federal Government Telegraph and Telephone Service.†—The services provided by the Federal Government include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and to a number of small islands in the Gulf of St. Lawrence; cable connections with Manitoulin Island in Ontario as well as telephone lines thereon; certain lines to outlying districts in northern Saskatchewan; telegraph lines from Edmonton to the Athabasca and Peace River country in Alberta and an extensive telephone system in the latter area.

At Mar. 31, 1955 the Telegraph and Telephone Service comprised 3,277 miles of pole line, 7,610 miles of wire, 138 miles of submarine cable, and 27 radio stations. It provided telephone service for 2,631 subscribers with telephones of whom 454 were served through lines connected to other company exchanges. The number of telegraph messages handled by this service in 1955 was 275,112. Net revenue from telegraph and telephone sources was \$310,040 and operating expenses amounted to \$544,793.

The Northwest Communication System operates northwesterly from Edmonton to the Yukon-Alaska border and comprises 2,000 miles of pole line, 48,424 circuit-miles for telegraph purposes and 23,256 circuit-miles for telephone purposes. The system provides commercial telephone and telegraph services at airports, settlements and communities in northwest Canada, including Whitehorse, Y.T., and Dawson Creek and Fort St. John, B.C. During 1955 there were 121,758 telephone calls and 62,080 telegraph messages handled. Revenue amounted to \$1,931,077 and expenditure for operating and maintaining the system was \$1,627,650.

Telegraph Systems.—The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world and are operated under great climatic and geographical difficulties.

* Except where otherwise noted, this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. The Division issues annual reports dealing with telegraph and telephone statistics.

† Revised in the Telecommunications Division, Department of Transport, Ottawa.

¹ Excludes commission operators.

² Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations.

³ Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and on the Atlantic Ocean.

Submarine Cables.—Four cable companies operate submarine cables landing in Canada: Cable and Wireless Limited; the Commercial Cable Company; the Western Union Telegraph Company; and the French Telegraph Cable Company. These companies operate to stations in the United Kingdom, Ireland, the United States, Bermuda, Australia, New Zealand, and St. Pierre and Miquelon Islands. The number of cables operating between connected stations and the length of cables are given in the following table.

Section 2.—Telephones

The tremendous growth of Canadian telephone systems in the past ten years has been matched by their technological development. Automation in the Canadian telephone industry began on a large scale about thirty years ago with the introduction of dial telephones and step-by-step equipment for automatic completion of local calls. About 70 p.c. of all telephones in Canada are now served by this method and the proportion is increasing steadily. Crossbar, a type of automatic switching equipment faster and more flexible than step-by-step, is now being introduced in several Ontario and Quebec communities with heavy calling volumes. The same basic type of crossbar switching is employed in the new regional long-distance office opened at Toronto in 1955; a similar installation will soon be placed in service at Montreal. These machines enable operators to dial calls directly to telephones in many distant cities across the continent. Within a few years the extension of this system to most major centres in Canada and the United States, and the addition of automatic call accounting machines, will make it possible for customers themselves to dial a large percentage of long-distance calls.

These developments in the automatic switching of long-distance calls are accompanied by advances in the provision of transmission channels on a trans-Canada basis. The first inter-system microwave radio relay chain, between Toronto and Winnipeg, is under construction by The Bell Telephone Company of Canada and the Manitoba Telephone System. Projected extensions eastward and westward, with Bell's existing Ontario-Quebec chain as a nucleus, aim at coast-to-coast microwave facilities for telephone and television purposes by mid-1958.

Long-distance services make possible the interconnection of practically any telephone across the country with any other, or with any of the 53,000,000 telephones in the United States. Connections are also available with more than 100 other countries and territories. Within Canada, long-distance service is provided by the separate systems and, on a nationwide scale, by seven major systems which constitute the Trans-Canada Telephone System.

More reliable transatlantic telephony, over submarine cable, will become a reality in 1956 with the expected completion towards the year end of cables between Nova Scotia and Newfoundland and between Newfoundland and Scotland. This joint project of Canadian Overseas Telecommunication Corporation, the American Telephone and Telegraph Company and the British Post Office approached the halfway mark in 1955 with the successful laying of the first of two cables linking Clarenville, Nfld., with Oban, Scotland. Many years of intensive research on both sides of the Atlantic have culminated in the design of a repeatered cable that meets the exacting requirements of voice communication and promises to function reliably over a long-service life.

Canadian manufacturing companies produce the greater part of the telephone equipment and materials used in this country. Dependable high quality is maintained and desired uniformity is made possible in operating and maintenance practices across the country.

Telephone Systems.—The 2,788 separate telephone systems, large and small, operating in Canada in 1954 co-operated in providing service across the country; 2,236 of these were small co-operative systems in rural districts and 389 were shareholder-owned companies. The largest of the latter were The Bell Telephone Company of Canada operating in Ontario and Quebec and serving 60 p.c. of all the telephones in Canada, and the British Columbia Telephone Company serving 9 p.c. of the total. Four private companies serve the Atlantic Provinces and three systems operated by the respective provincial governments serve the Prairie Provinces.

Telephone Equipment.—Because of the insistent demand for increased telephone service the number of telephones in use in Canada has more than doubled in the past ten years. At Dec. 31, 1954 there were 3,860,269 telephones in service compared with 1,848,794 in 1945. During 1954 a total of 253,862 telephones were installed, almost equalling the record of 1953, but at the end of the year many thousands of unfilled orders remained for both main service and higher grades of service. The number of residential telephones increased 8 p.c. during the year, business telephones 6 p.c., rural telephones 5 p.c. and pay telephones 7 p.c. Many exchanges were converted to dial operation in 1954 and by the end of the year 72 p.c. of all telephones in Canada were dial, the remainder being operated from manual switchboards. Pole line mileage and mileage of wire continues to increase year by year.

3.—Mileages of Pole Line and Wire and Number of Telephones in Use 1945-54

Note.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems	Pole Line Mileage ¹	Mileage of Wire	Telephones in Use					
				Business	Resi- dential	Rural ²	Public Pay	Total	Per 100 Popu- lation

Telephone Calls.—The major telephone systems make counts of completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, give their total

volume of business. Estimates are included for the small systems which do not count completed calls. The number of completed calls on all systems in 1954 was estimated at 6,347,532,000 compared with 6,084,655,000 calls in 1953, or an average of 1,644 calls per telephone and 418 calls per person compared with 1,687 calls per telephone and 412 per person in 1953.

Extended area service which eliminates toll charges between adjacent communities was introduced in more centres across Canada but, despite this service, long-distance calls increased by 5,862,000 to a total of 137,761,000 for the year 1954.

5.—Local and Long-Distance Calls and Average Calls per Telephone and per Capita 1945-54

¹ Statistics of The Bell Telephone Company for both Quebec and Ontario are included under Quebec.

² Excludes wages and employees for rural systems.

PART III.—RADIO COMMUNICATIONS

Section 1.—Administration*

The administration and regulation of radio communication in Canada is carried out by the Telecommunications Division of the Department of Transport. The radio activities of the Division may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, study of radio wave propagation, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio communication stations and radio aids to marine and air navigation.

National and international radio laws and regulations include: the Canadian Broadcasting Act, the Radio Act and Regulations made thereunder; the International Telecommunication Convention and Radio Regulations annexed thereto; the Inter-American Radiocommunications Convention; the Inter-American Arrangement Concerning Radiocommunications; the North American Regional Broadcasting Agreement; those Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; the Canada Shipping Act and Radio Regulations for Ship Stations issued thereunder, and that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships.

* Revised in the Department of Transport, Ottawa.

Licensing and Operation.—In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister of Transport before being dealt with by the Department of Transport. The Canadian Broadcasting Corporation also controls the linking-up of stations that form networks and in addition the character of programs being broadcast. With these exceptions the control of broadcasting stations is carried out by the Telecommunications Division of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, and the United States and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

The allocation of high frequencies and their efficient utilization requires reasonably accurate information on the transmission properties of the ionosphere which vary with the season, the sunspot cycle and other factors. This information is obtained from hourly measurements of the ionosphere made at some 70 points throughout the world and analysed by the Radio Physics Laboratory, Defence Research Board, Ottawa, and by the United States Bureau of Standards at Washington, D.C. The Canadian measurement stations are located at St. John's, Nfld.; Resolute Bay, Cornwallis Island and Baker Lake, N.W.T.; Fort Chimo, Que.; Churchill and Headingley, Man.; Ottawa, Ont.; and Prince Rupert, B.C. Data from these stations are correlated by the Defence Research Board. Six frequency monitoring stations are maintained at suitable points across Canada to check operating frequencies of all classes of radio stations to ensure that they do not depart from the assigned frequency by an amount greater than that permitted by the international conventions.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and in addition the ship station as a whole is inspected before the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention.

Analogous inspections of aircraft radio stations are carried out. Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. A certificate of airworthiness is granted to manufacturers for each type or model of aircraft radio equipment that has been demonstrated to meet the requirements. Only type-certificated equipment is accepted for use on scheduled airlines although other equipment, if inspected, is acceptable for other aircraft.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be closely adhered to and are particularly essential on ship and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.—Under the Radio Act the use of electrical equipment that will produce harmful interference to broadcast reception is not permitted. The Telecommunications Division of the Department of Transport maintains 53 cars equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 25 cities throughout Canada.

1.—Investigations of Inductive Interference, Years Ended Mar. 31, 1951-54

Item	1951	1952	1953	1954
	No.	No.	No.	No.
Sources Investigated—				
Electrical distribution systems and power lines.....	1,836	2,307	2,191	2,016
Domestic and commercial electrical apparatus.....	7,756	5,022	6,205	5,439

Sources not reported cured.....	2,029	1,287	1,130	385
Sources having no economic cure.....	99	42	119	192

Industrial, scientific and medical apparatus is brought under strict control in accordance with Regulations for Controlling Radio Interference and under the authority of the Radio Act. Regulations require that radiation from such apparatus, which is liable to cause interference to radio communications, must be suppressed either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type tests on diathermy and industrial heating apparatus submitted by manufacturers, and the types that fulfil the requirements of the Department are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

Radio Revenue.—Regulations concerning the rendering and settlement of international accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and inter-station messages handled by Departmental ships and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic via Departmental airway

radio stations, and radio services rendered to aircraft of private airline companies by such stations. The volume of messages and words handled during the year ended Mar. 31, 1955 and the revenue therefrom, together with revenue from licence fees, examination fees, fines and forfeitures, rentals, etc., are given in Table 2.

Section 2.—Radio Stations and Services

Subsection 1.—Radio Stations Operating in Canada

Radio stations operating in Canada and on ships and aircraft registered in Canada are classified by type in Table 3. In addition to the radio services under its own control the Department of Transport is concerned with the regulation of the radio services of other government departments, with special reference to the assignment of suitable frequencies and the application of techniques compatible with frequency planning and with public and private radio services. The Department of National Defence, in addition to stations established for military purposes, operated 13 permanent stations in 1955; the Department of Agriculture 15; the Department of Citizenship and Immigration 4; the Department of Fisheries 14; the Department of Mines and Technical Surveys 62; the Department of National Health and Welfare 12; the Department of National Revenue 2; the Department of Public Works 6; the Department of Northern Affairs and National Resources 112; the National Research Council 16; and the Royal Canadian Mounted Police 994.

3.—Radio Stations in Operation by Type as at Mar. 31, 1955

Class	No.	Class	No.
Department of Transport Stations—		Other Stations—	
Coast stations.....	39	Ship stations (class A).....	4,135
Marine radiobeacon stations.....	56	Ship stations (class B—receiving only).....	6
Radio links.....	9	Limited coast stations.....	18
Lighthouse radiotelephone stations.....	166	Aircraft stations.....	1,626
Canal radiotelephone stations.....	5	Public commercial stations.....	386
Loran stations.....	6	Private commercial stations.....	12,300
Ionosphere stations.....	5	Municipal services stations.....	342
Monitoring stations.....	6	Private commercial broadcasting stations (sound)—	
Ship stations (class A).....	40	Operated by the Canadian Broadcasting Corporation.....	109 ¹
Aircraft stations.....	29	Operated by private owners.....	191
Radio range stations.....	95	Private commercial broadcasting stations (television)—	
Combined radio range and aeronautical communications stations.....	55	Operated by the Canadian Broadcasting Corporation.....	7
Combined aeronautical radiobeacon and communications stations.....	6	Operated by private owners.....	4
Instrument landing installations.....	26	Technical or training schools.....	10
Aeronautical radiobeacons.....	31	Experimental stations.....	180
Aeronautical communications stations.....	7	Commercial receiving stations.....	344
Fan marker stations.....	10	Amateur experimental stations.....	7,340
Weather reporting stations.....	6	Total, All Stations.....	27,595

¹ Includes 54 repeater stations.

The foregoing classes are numerous and complicated by the fact that many of them perform closely related functions. Descriptions of the services provided by different types of government operated stations are given in the 1951 Year Book, pp. 804-808.

Subsection 2.—Federal Radio Communication Services

The Canadian Overseas Telecommunication Corporation.—By virtue of the Canadian Overseas Telecommunication Corporation Act which came into force on Jan. 1, 1950 (R.S.C. 1952, c. 42), the Canadian Overseas Telecommunication Corporation was established to acquire, maintain and operate the external telecommunication facilities in Canada of Cable and Wireless Limited and the Canadian Marconi Company Limited. The Corporation consists of five Directors, one of whom is also President and General Manager of the Corporation.

Since May 1, 1952 the Corporation has been maintaining the said facilities. Headquarters are located at Montreal and overseas cable stations at Bamfield, B.C., Halifax, N.S., and Harbour Grace and St. John's, Nfld. Wireless transmitting and receiving stations are located at Drummondville and Yamachiche, Que., respectively. The functions of the Corporation may be expressed as follows:—

- to establish, maintain and operate in Canada and elsewhere external telecommunication services for the conduct of public communications;
- to carry on the business of public communications by cable, radiotelegraph, radiotelephone or any other means of telecommunication between Canada and any other place and between Newfoundland and any other part of Canada;
- to make use of all developments in cable and radio transmission or reception for external telecommunication purposes as related to public communication services;
- to conduct investigations and researches with the object of improving the efficiency of telecommunication services generally; and
- to co-ordinate Canada's external telecommunication services with the telecommunication services of other parts of the Commonwealth.

Radio Aids to Marine Navigation.—Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. A safety and communications service for shipping is provided covering the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, and Hudson Bay and Strait. Details of these services, outlined below, may be obtained on request from the Department of Transport, Ottawa.

Coast Radio Stations.—Coast stations provide a safety watch and communications service for ships at sea and provide, as well, regularly broadcast weather reports, storm warnings and notices of dangers to navigation. The stations carry out communications by radiotelegraph or radiotelephone, or both, and many of them provide connections to land telephone lines so that ships may communicate directly with any telephone subscriber. At Halifax (CFH) and Vancouver (CKN), shortwave facilities are furnished for worldwide communications. These stations participate in the British Commonwealth scheme.

The coast stations on Hudson Bay and Strait, in addition to the regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions and direction finding bearings.

Direction Finding Service.—Coast radio direction finding stations are operated on the Atlantic and Pacific Coasts and on the Hudson Bay and Strait, which enable ships to obtain a line of bearing from the station. No charge is made for this service.

A chain of automatic radiobeacon stations is also maintained to provide a navigational aid to mariners by transmitting signals on which bearings may be taken by ships. These stations are arranged, where possible, in groups of three, transmitting on a common frequency but in proper time sequence so as to avoid interfering with each other. A navigator may thus obtain three bearings within three consecutive minutes and fix his location. A number of radiobeacons are synchronized with fog alarms at the same point, for distance finding in foggy weather. Ships may also request the transmission of signals from the coast stations for direction finding purposes.

Loran Stations.—Loran is a long-range radio aid to marine and air navigation which provides accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans.

Radar.—It has become general practice to equip merchant ships with radar, a valuable aid to marine navigation, and many important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour.

Miscellaneous Services.—Lighthouses, particularly at locations where they would otherwise be completely cut off from summoning help in case of illness, are provided with low-power transceivers for use in emergencies. Lighthouse radiophone stations are organized into groups working into a control station.

Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge.

Radio and radar equipment used aboard vessels of the federal marine, pilotage and canal services, vessels operated by the Department of Fisheries and the Department of Mines and Technical Surveys and Canadian National Railway ferries is maintained by the Telecommunications Division of the Department of Transport.

Radio Aids to Aeronautical Navigation.—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by many Canadian and foreign air carriers flying over Canadian territory. Trained engineers and technicians are assigned to six District Offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., in order that facilities may be constructed and efficiently operated.

Radio Ranges.—The principal radio aid to air navigation provided by the Department of Transport is the low frequency radio range station, located approximately every hundred miles along airways. It provides specific track guidance to pilots by means of audible signals and the signals may also be used for the purpose of obtaining direction finding bearings. In addition radiotelephone communications are provided between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights.

There are now being constructed a number of very high frequency omni-directional ranges (VOR). Unlike the existing radio range stations this type of facility does not limit the aircraft using the station to one of four distinct courses, but enables the pilot to select at will his desired course. Construction is advancing on facilities to form a six-station omni-range airway between Montreal, Que., and Windsor, Ont., with standard 200 watt installations located at Montreal, Ottawa, Stirling, Toronto, London and Windsor. Work has also started on six additional stations for a high altitude airway from Toronto, Ont., to Winnipeg, Man., and on one isolated station at Gander, Nfld.

Beacons, Markers, etc.—Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers, operating on very high frequencies, are usually placed on an airway so as to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. Station location markers are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at most radio range sites.

Instrument Landing Systems.—Instrument landing systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Twenty-six instrument landing systems are in operation, a new installation having been commissioned during 1955 at Saint John, N.B.

Aeronautical Communications Stations.—To assist in providing communication between aircraft and ground, radio stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication to both domestic and international air carriers. The international communications stations form a major contribution on the part of Canada to international aviation. They may be grouped as follows: (1) communication for Meteorological Services; (2) communication for the Air Traffic Control Services; and (3) communication, for the benefit of the airline operating agencies, with their aircraft and between their despatch offices.

Meteorological Communications Stations.—Six stations whose primary function is weather reporting are located at strategic points throughout the country from coast to coast and into the Far North; some are located in remote areas where radio is the only means of communication.

Supplementing the facsimile wire-line services, the transmission of weather maps is extended by radio to points in northern Canada which cannot be served by wire lines.

Subsection 3.—Other Government and Commercial Radio Communication Services

Provincial Government Radio Services.—Provincial authorities use radio services in many Departments. Table 4 shows the number of stations operated by the Provincial Governments.

4.—Radio Communications Stations Operated by Provincial Governments as at Mar. 31, 1955

Province	Stations	Province	Stations
	No.		No.
Newfoundland.....	36	Manitoba.....	226
Nova Scotia.....	13	Saskatchewan.....	427
New Brunswick.....	30	Alberta.....	302
Quebec.....	414	British Columbia.....	817
Ontario.....	1,128	Total.....	3,393

Commercial Radiotelephone Services.—The North-West Telephone Company operates a radiotelephone service between points in British Columbia not hitherto served by telephone communications. Under licences granted by the Department of Transport, the Company has established a number of permanent public commercial radiotelephone stations in that Province. These stations are authorized to provide communication to private commercial radiotelephone stations located at isolated points in the Province. The Company is also licensed to establish limited coast stations at Lulu Island, Powell River, Vancouver, Nanaimo, Victoria, Harrison Lake, Parksville, Alert Bay, Campbell River, Hardwicke Island, Halberg, Sumas Mountain, and Prince Rupert, B.C., to provide a ship-to-shore service. These stations, used in conjunction with the ordinary telephone exchange, provide a duplex-radiotelephone service to isolated points and to certain ships at sea, and also provide a limited amount of service to stations of the land mobile category.

The North-West Telephone Company is also licensed to provide emergency radiotelephone communication at any point in British Columbia and to carry out tests for extending the existing radiotelephone service throughout the Province.

To provide trans-river communication in the lower St. Lawrence area, the following companies operate stations in the Province of Quebec at La Malbaie, Tadoussac, Rivière-du-Loup, Rimouski, Matane, Montmagny, St. Antoine, Ile aux Grues, Cap Chat, Forestville, Trinity Bay, Seven Islands, Baie Comeau, Clarke City, Gaspé Copper Mines, Mont Louis, Chicoutimi, and Tour à Pica: La Compagnie de Téléphone de Charlevoix et Saguenay, La Compagnie de Téléphone de Kamouraska, the Quebec Telephone Corporation, Gulf of St. Lawrence Telephone Company and La Compagnie du Téléphone Saguenay, Que.

The wire line facilities between Saint John, N.B., and Digby, N.S., between Saint John, N.B., and Halifax, N.S., between Red Head, N.B., and Mount Hanley, N.S., between Lutz Mountain (Moncton), N.B., and Egmont, P.E.I., and between Charlottetown, P.E.I., and New Glasgow, N.S., are supplemented by radiotelephone lines.

The stations at Saint John, Red Head, and Lutz Mountain (Moncton) are operated by the New Brunswick Telephone Company. The terminals at Digby, Halifax, New Glasgow and Mount Hanley are operated by the Maritime Telephone and Telegraph Company. The stations at Charlottetown and Egmont are operated by the Island Telephone Company.

The Bell Telephone Company of Canada provides a land mobile terminal radiotelephone service at numerous points in Ontario and operates a microwave link between Toronto and Ottawa, Ont., and Montreal, Que., which carries television programs and is capable of providing many additional telephone circuits. Radio links are also maintained between Pelee Island and Leamington, Ont., and across the St. Lawrence between Sorel and Joliette, Que.

The Canadian National Railway Company operates an extensive radiotelegraph and radiotelephone service in Newfoundland including links between Table Mountain, Nfld., Cape North, N.S., and New Waterford, N.S. This Company is also authorized to provide a limited coast-station service at Port aux Basques, Nfld.

The Canadian National Railway Company and the Canadian Pacific Railway Company are jointly establishing microwave circuits between Toronto and Windsor and between Montreal and Quebec City.

The Avalon Telephone Company operates public commercial stations in Newfoundland to supplement its wire lines and to provide telephonic communication with isolated communities.

The Manitoba Telephone System operates radiotelephone links involving stations at the following points: Riverton, Manigotagan, Hecla Island, Gimli, Norway House, Bissett, Great Falls, The Pas, Snow Lake and Winnipeg, Man. In addition the System operates stations at Gimli, The Pas and Norway House to provide terminal service for ships operating on Lake Winnipeg.

Norwesto Communications Limited operates a public commercial radiotelephone service consisting of stations located at Kenora, Red Lake, Ball Lake, Sioux Narrows, Dryden, Sioux Lookout, Minaki and Redditt, which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations at isolated points throughout the northwestern part of the Province of Ontario.

The Red Lake Telephone Company operates a public commercial radiotelephone station at Madsen, Ont., to provide a connection between the local wire telephone system and the Norwesto Communications Limited network.

The Okanagan Telephone Company operates a public radiotelephone service between Revelstoke and Arrowhead, B.C., and a public commercial terminal station at Kelowna to provide telephonic communication to privately owned stations at isolated points in the Kelowna area.

Miscellaneous Radio Communication Services.—Radiotelegraphy and radiotelephony are used throughout Canada to provide means of maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

Municipal government departments have steadily increased their use of radio to facilitate operations. This increase is noted in all categories of municipal services using radio as a medium of communication with vehicles, i.e., police, fire, engineering, hydro, etc. In addition the trend toward expansion in the employment of radio for urban land mobile communication has continued and has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in this increase. Public mobile radio relay message services (telephone answering service) have also been licensed to operate in a number of cities including Montreal, Toronto and Edmonton.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have considerably expanded their use of radio in both urban mobile and point-to-point radio fields.

Section 3.—Broadcasting in Canada*

Broadcasting in Canada as it has developed over a period of more than thirty-five years is a combination of public and private enterprise. Under the Canadian Broadcasting Act (R.S.C. 1952, c. 32) authority for broadcasting service is vested in a Board of eleven Governors, appointed by the Governor General in Council and chosen to give representation to the principal geographical divisions of Canada. The Board is directly responsible to Parliament for carrying on a national broadcasting service in Canada and for the policies of the Canadian Broadcasting Corporation. It also administers and supervises regulations pertaining to broadcasting which are observed by both the CBC and privately owned stations.

As of Nov. 1, 1955 there were 22 CBC radio stations and eight CBC television stations; 191 privately owned radio stations and 22 privately owned television stations. All the privately owned television stations and many of the privately owned radio stations operate in partnership with the CBC in helping to distribute national radio and television services over five networks: in radio, the Trans-Canada, Dominion and French networks, and in television, the English and French networks. The networks are operated by the CBC.

The privately owned stations are subject to licensing control by the Department of Transport and to CBC regulations authorized by Parliament. They serve, primarily, the locality in which they are situated with the general purpose of providing community service. Many such stations are located in relatively small urban centres and serve, as well, the larger population located in the surrounding rural areas. Others serve medium-sized and metropolitan cities together with the audiences located in the surrounding towns and rural areas, providing alternative programs to those of the CBC. In sparsely populated areas where privately owned stations would not be economical the CBC provides service through unattended, low-power relay transmitters. Many of the privately owned stations form an integral part of the national networks as outlets for national service programming.

The Chairman of the Board of Governors is required to devote the whole of his time to the performance of his duties under the Act. The Board, whose members are not paid and must take an oath of office disclaiming any personal interests in broadcasting, reviews broadcasting activities in Canada generally in the interests of the country as a whole. Policy is determined and supervised by the Board but day-to-day operations and executive direction of the CBC are conducted by the General Manager. Although the CBC is responsible for the regulations controlling the establishment of networks and the proportion of time that may be devoted to advertising in broadcast programs, it neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of observing regulations rests with individual station management.

The general principles of this system, as established by Parliament, have been approved by 14 Parliamentary Committees and two Royal Commissions.

Radio Broadcasting Facilities.—As stated above, the CBC operates three networks: the Trans-Canada and Dominion networks serving English language audiences from the Atlantic to the Pacific, and the French language network extending from Moncton, N.B., to Edmonton, Alta. As at Nov. 1, 1955 the Trans-Canada network was made up of 26 basic stations—13 CBC owned and 13 privately owned. There were 18 supplementary stations, four of which were CBC owned Newfoundland stations. The Dominion network consisted of 31 basic stations of which 30 were privately owned. Nineteen supplementary privately owned stations also received Dominion network service. The French network had five basic stations, four of which were CBC owned and one privately owned, and 20 privately owned affiliated supplementary stations.

Table 5 presents the broadcasting stations of the Canadian broadcasting radio network.

* Prepared by H. D. Hodgson, Press and Publicity Division, Canadian Broadcasting Corporation, Ottawa. The history of the Canadian Broadcasting Corporation is given in the 1947 Year Book, pp. 737-740.

5.—Broadcasting Stations of CBC Radio Networks as at Nov. 1, 1955

Television Broadcasting Facilities.—As at Nov. 1, 1955 there were 26 television broadcasting stations in operation on the English network (six of which were CBC owned) and four under construction. On the French network, four stations were in operation (two of which were CBC owned) and two were under construction. These stations were located and powered as follows:—

It was estimated that at the end of March 1955 more than 70 p.c. of all Canadians were within reach of the national television system. Although the linking of all Canadian television stations from coast to coast for instantaneous telecasting of programs may take several years because of the distances and difficult terrain involved, microwave facilities had reached Windsor, Ont., on the west and Quebec City on the east by July 1955.

When television broadcasting began in September 1952, 146,000 television sets were in use in Canada. One year later the number had tripled and by July 1955 more than 1,400,000 receivers were in use in Canadian homes.

Canadian Broadcasting Corporation Service.—The CBC is organized in the following divisions: Program, International Service, Engineering, Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury. Head Office is at Ottawa, but in order to present programs at suitable times and to give expression to varying interests across Canada, the CBC maintains regional offices at St. John's, Nfld., Halifax, N.S., Montreal, Que., Toronto, Ont., Winnipeg, Man., and Vancouver, B.C. Production facilities are maintained at St. John's, Nfld., Sydney and Halifax, N.S., Moncton, N.B., Chicoutimi, Quebec and Montreal, Que., Ottawa, Toronto and Windsor, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver and Prince Rupert, B.C.

Domestic Radio Program Service.—During the year ended Mar. 31, 1955, 69,222 programs representing 21,905 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours 86.0 p.c. were devoted to non-commercial and public service programs and the remainder to commercial presentations. Of the total broadcasting hours in 1954-55, 66.7 p.c. was scheduled on the Trans-Canada network, the Dominion network released 7.5 p.c. and the remainder was released on the French network.

The CBC originated and produced 90.2 p.c. of its network broadcasts. Of the remainder, 1.3 p.c. came from private stations and 8.5 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by drama and feature, news, classical, music, talks, variety, agriculture programs, women's programs, semi-classical music, educational broadcasts, children's programs, religious periods, dance music, sports programs, old-time music, symphony music, band music, sacred music, prose and poetry, and opera. Table 7 shows the total time devoted to sustaining and commercial programs in radio and analyses those made up of music as compared with the spoken word. The figures are based on the number of programs presented on the three CBC radio networks as live programs, recorded programs, or programs that were recorded for later presentation. They do not include any program that was repeated to any section of the networks. Actually there were 11,171 programs representing 4,394 hours repeated at various times and over various sections of the networks.

7.—Classification of CBC Radio Programs, Year Ended Mar. 31, 1955

Class of Program	Programs	Hours	Distribution of Hours
	No.	No.	p.c.
Musical	26,806	11,211:20	51.2

Totals	69,222	21,905:45	100.0

Music and Drama.—Music and drama are two of the chief items in the CBC schedules. In the year ended Mar. 31, 1955 music made up more than one-half of the entire network schedule, and those in the "drama and feature" category comprised the largest percentage of time among spoken-word programs. High quality programs of both types are heard frequently at good listening hours. Apart from regular broadcasts by Canadian symphony orchestras much fine music is presented on *CBC Wednesday Night*—an evening of serious programming on the Trans-Canada network—and once a week by the CBC Symphony Orchestra. Chamber music and choral music originating at many Canadian points as well as recitals by Canadian artists, many of international reputation, are important features of the music schedules. Productions by the CBC Opera Company and by the CBC Light Opera Company are heard throughout the season. During the 1954-55 season the CBC Opera Company presented several full scale operatic productions for television.

During the year ended Mar. 31, 1955 the CBC Drama Department was responsible for the production of 307 radio plays, including 254 originals. More than 90 p.c. of the scripts for these plays were written by Canadians. On television CBC presented 33 one hour dramas, of which 11 were Canadian originals and 11 others adaptations by Canadians. Of 58 half hour dramas, 24 were Canadian originals and four were adaptations by Canadians.

On radio the Sunday Night *Stage* series presented 36 plays, 16 of which were originals and all of which were written by Canadians. *Vancouver Theatre* broadcast 48 half hour plays on Friday nights. *Prairie Playhouse* continued from Winnipeg Thursdays with 46 half hour plays, and CBC Halifax presented 30 dramas on the Maritime network Tuesdays. On the French network, under the title *Histoires Extraordinaires*, Jean-Louis Roux adapted about 30 stories and novels by writers of different countries. The two principal television drama series continued to be the one hour plays Tuesdays on the English network and the 90 minute plays Sunday evenings on the French network. Both series are produced with Canadian talent in the CBC's television studios at Toronto and Montreal.

Television.—Regular CBC television broadcasting was begun from Toronto (CBLT) and Montreal (CBFT) in September 1952. Five CBC television stations were in operation for the whole 1954-55 fiscal year. CBHT Halifax began operating in December and presented 716 hours up to the end of March; CBFT Montreal, the CBC's French outlet in that city, presented a total of 1,883 hours; CBMT Montreal, the English outlet, presented 2,681 hours; CBOT Ottawa, with programs both in English and in French, 3,124 hours; CBLT Toronto 3,175 hours; CBWT Winnipeg, which started operations in May, 2,153 hours; and CBUT Vancouver 2,725 hours.

In addition to producing local live programs CBC stations exchanged programs among themselves and also carried programs produced by American networks and the British Broadcasting Company. During 1954-55 CBLT Toronto carried 605 hours of American and BBC programs and 314 hours from CBMT Montreal, CBFT Montreal, CBUT Vancouver, CBOT Ottawa, CBWT Winnipeg, and from the United Nations at New York. CBHT Halifax carried 130 hours of American and BBC programs and 241 from other Canadian stations. CBFT Montreal carried 17 hours of exchange material. CBMT Montreal had 549 hours imported and 1,345 from other Canadian points; CBOT Ottawa 514 imported and 2,221 domestic; CBWT Winnipeg 345 imported and 553 domestic, and CBUT Vancouver 426 imported and 615 from other Canadian stations.

CBC International Service (Shortwave).—The International Service, inaugurated on Feb. 25, 1945, is operated by the CBC on behalf of the Government of Canada. Its principal aims are to tell the people of other countries about life in Canada and to help unify the western world in the defence of freedom. The International Service has been growing over the years to meet the requirements of Canada's expanding interest and influence abroad. The two 50,000 watt transmitters at Sackville, N.B., are linked by approximately 600 miles of land lines to the studios and the program headquarters of the service in the Radio Canada Building at Montreal. Programs are broadcast in 15 languages—English, French, Dutch, German, Italian, Danish, Swedish, Norwegian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian and Polish. In addition regular programs are prepared on tapes and discs for relay over the radio broadcasting facilities of Austria and Greece. Special shortwave broadcasts service Canada's Armed Forces abroad and regular programs are also broadcast to Australasia and the Northwest Territories. A new American Service is also heard in Australia, New Zealand and the Islands of the Pacific.

Over 30,000 letters are received annually from listeners in all parts of the world, attesting to the strength of the International Service signal and to a wide interest in Canada and Canadian radio programs. These letters are answered by the Language Sections and specific requests for information are referred to the departments of government concerned. Technical reception reports are also verified. At regular intervals the International Service mails a program schedule to more than 150,000 listeners in all parts of the world.

These are published in the form of illustrated booklets and contain program notes, times, frequencies and wavelengths. The program schedules—mailed free on request—are printed in 15 languages and each issue deals with some specific aspect of Canadian life.

In addition to broadcasting shortwave programs from Canada for 95 hours weekly, the International Service has developed a liaison with broadcasting organizations in many other countries. An ever increasing number of programs are relayed over the national networks of many lands, thus assuring an even wider audience for the International Service programs.

Transcriptions are produced in the studios of the International Service at Montreal and include a variety of material recorded in all parts of Canada. Distribution is world-wide and is carried out in close co-operation with Canada's Missions abroad. Music transcriptions featuring nearly 150 fifteen minute and thirty minute programs cover a wide range of material from classical to popular music and include Canadian folk songs and works of contemporary Canadian musicians. These programs are currently being used in about 85 countries. Spoken-word transcriptions recording all aspects of Canadian life are available in English, French and Spanish. Catalogues listing the programs are sent to radio organizations in the countries concerned; over 100 radio networks and stations are currently receiving International Service transcriptions.

CBC Finances.—The CBC's financial statement for the year ended Mar. 31, 1955 disclosed a net operating surplus of \$4,267,668 after providing for depreciation and obsolescence. Sound broadcasting and integrated services sustained an operating loss of \$211,753 and television service realized an operating surplus of \$4,479,421.

A decrease of \$899,987 as compared with the previous year in income earned by the sound broadcasting and integrated services was accentuated by an increase of \$595,661 in operating expenses. The increase in operating expenses of the television service was \$804,547 greater than the increase in income.

The sum of \$5,384,027 was expended by the Corporation during 1954-55 in extending and improving broadcasting facilities. Capital expenditures were \$4,390,746 for television and \$993,281 for the sound broadcasting and integrated services. During the year a complete study of depreciation rates was made in conjunction with the Engineering Division. Scientific rates have been established varying from 5 p.c. to 20 p.c. depending upon the type of assets. The capital assets were aged and the new rates applied to ascertain the adequacy of the accumulated reserve for depreciation. It was established that the reserve was \$241,857 in excess of requirements and as a result the amount was credited to surplus. Assets amounting to \$43,712 were written off as obsolete or no longer serviceable.

Since its inception the CBC has continued to extend and improve its broadcasting facilities through operating surpluses, when available, and through loans from the Government of Canada. A fifth loan for the television service amounting to \$3,000,000, authorized by Act of Parliament, is to be amortized by 30 semi-annual instalments commencing Jan. 1, 1961.

The Corporation carries on its books as a separate item the total cost of the Crown's property together with a like sum as a liability to the Government of Canada. Also costs of operating the International Service which are borne by the Federal Government are not considered as chargeable to the CBC because the grants from the Government of Canada and revenue from licence fees are used only to serve listeners within Canada.

In the year ended Mar. 31, 1955 artists, musicians, singers, actors and script writers received nearly \$8,000,000 from participation in CBC programs. This amount was divided almost equally between radio and television. Performers' fees for the combined services totalled more than \$6,000,000, while a total of more than \$1,600,000 was paid for scripts, performing rights and music and musical arrangements. Performers' fees included more than \$85,000 paid to Canadian symphony orchestras for broadcast rights.

Operating expenditures in 1954-55 which exceeded those of the previous year by \$122,306, are shown in Table 8. The value of Crown assets in the custody of the Corporation increased \$50,789 during the year after write-offs amounting to \$2,637.

8.—Income and Expenditure of the CBC, Year Ended Mar. 31, 1955

Item	Sound Broadcasting and Integrated Services		Television Service		Total

Privately Owned Stations.—As stated previously, privately owned broadcasting stations are subject to the Radio Act, the Canadian Broadcasting Act and Regulations made thereunder, and to the provisions of the Radio Regulations annexed to the International Telecommunication Convention and Regional Agreements for the time being in effect in Canada. Since Mar. 31, 1923 private commercial broadcasting station licences have been required by Government regulation and both sound and television broadcasting stations are now authorized by this class of licence.

Any application for a licence to establish a new private station or for an increase in power, change of channel, or change of location of any existing private station must be referred by the Minister of Transport to the Canadian Broadcasting Corporation; the Corporation after giving public notice thereof in the *Canada Gazette* will make such recommendations to the Minister of Transport as it may deem fit. The approval of the Governor in Council must be obtained before any licence for a new private station is issued. Private commercial broadcasting station licences are conditional upon the ownership or control of the stations, and the shares of capital stock of licensed companies in certain instances, may not be transferred without the permission of the Minister of Transport having been first obtained upon the recommendation of the Canadian Broadcasting Corporation. Proof of performance statements showing public service, community service and light activity are filed annually with the Canadian Broadcasting Corporation. Organizational and financial statements are filed annually, on a confidential basis, with the Department of Transport.

The first sound broadcasting in Canada took place when a privately owned communications company in Montreal was authorized to transmit programs on an experimental basis during the latter part of 1918 and in the winter evenings of 1919 over its Station XWA. Under the first licencing regulations in the year ended Mar. 31, 1923, 34 licences were issued. By November 1955 the number had increased to 191, of which 156 were AM standard band stations, 27 were frequency modulated stations and eight were shortwave stations. Of the 156 standard band stations, two were operating with a power of 50,000 watts, five with 10,000 watts, 47 with 5,000 watts, 57 with 1,000 watts, 43 with 250 watts and two with 100 watts.

A privately owned broadcasting station is required to pay to the Receiver General of Canada an annual licence fee based on the gross revenue for licence fee computation for the fiscal year of the station. Because the fiscal years of the privately owned stations end at different dates it is difficult to estimate the gross revenue of all stations for any one year; however the estimated gross revenue for the calendar year 1954 was approximately \$29,500,000. This revenue is obtained from commercial advertising.

The first privately owned television broadcasting station in Canada was authorized to commence scheduled broadcasting on Oct. 20, 1953. It was located at Sudbury, Ont. By Nov. 1, 1955 there were in operation 22 privately owned stations (see Table 6).

International Agreements.—In 1937 a conference was held at Havana, Cuba, for the purpose of reviewing the entire broadcasting situation in the North American region for the purpose of developing a workable plan which would permit the growth of the broadcasting industry. The product resulting from the deliberations of that conference was the treaty known as the North American Regional Broadcasting Agreement which came into effect in 1941 and was extended by an instrument known as the *modus vivendi* or interim agreement signed at Washington in 1946. In 1949 and 1950 conferences were held at Montreal and Washington, and a new North American Regional Broadcasting Agreement was drafted in December 1950 which has been implemented as an administrative arrangement.

The Canadian-United States Television Agreement provides for the assignment and utilization of 82 television channels between 54 and 890 mc/s along the border between Canada and the United States of America, within an area of 250 miles on either side of the boundary. This Agreement provides that all station assignments within its scope shall be made in accordance with the Agreement and shall have an effective radiated signal in any vertical or azimuthal plane not in excess of 100 kw. for Channels 2 to 6, 325 kw. for Channels 7 to 13 and 1,000 kw. for Channels 14 to 83.

PART IV.—THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century before Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Three Rivers and Montreal. In 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851 the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.—The basic task of the Canadian Postal Service is the handling and transmission of postal matter—letters, parcels, newspapers, magazines, etc.—and in discharging this duty it maintains a wide variety of services—post offices and air, railway, land and water transportation facilities.

This basic task involves many associated functions which include the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of COD articles for mail and dispatch; the sorting, making up and dispatching of ordinary and registered mail to other offices; the sorting and delivery of incoming mail of all kinds; and the transaction of money order and Post Office Savings Bank business.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 12,138 were in operation at Mar. 31, 1955 as against 12,202 at the same date in 1954. Postage paid in 1954-55 by means of postage stamps amounted to \$74,583,720 (\$64,546,067 in 1954). Post office money orders are issued for any amount

up to and including \$100 at more than 7,000 post offices, for payment in almost every country in the world as well as in Canada. Orders payable in Canada only, for amounts under \$16, are issued at more than 4,000 additional post offices. Post Office Savings Banks are in operation in all parts of the country and on Mar. 31, 1955 had total deposits of \$36,780,666.

Post offices are established for the transaction of all kinds of postal business wherever the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities there is a main post office and, if size of population calls for extra services, postal stations and sub-post offices are operated. Letter carrier delivery is given in 132 cities and towns by over 5,800 uniformed letter carriers. Postal stations are maintained on the same lines as the main post offices and perform full postal business, including general delivery service and a post office lock-box delivery as well as letter carrier delivery service accommodating the surrounding district.

Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks that include the sale of unemployment insurance stamps, the collection of Government annuity payments, the distribution of income tax forms, Civil Service employment application forms and the display of Government posters.

Organization.—The Canada Post Office includes an Operating Service and Headquarters at Ottawa. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General. There are five Headquarters Branches: Administration, Operations, Transportation, Financial, and Personnel, each under a Director. Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local Postmaster. District office functions relating to services in the district and all inspections and investigations are under District Directors of Postal Services in strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada) to settlements and missions far within the Arctic. Canada's airmail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States airmail system. Since July 1, 1948 all first class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954 this service was extended to first class items up to and including eight ounces in weight. Air stage service provides the sole means of communication with the outside for many areas in the hinterland. There were approximately 30,000 miles of airmail and air stage routes in Canada in 1955 as compared with 29,640 miles in 1954.

The principal means of mail transportation is the railway mail service which operates along about 40,000 miles of track and, in 1954, covered over 47,000,000 track miles. The railway mail service employed a staff of 1,296 mail clerks to prepare the mails for prompt delivery and dispatch while *en route* in the railway mail cars. Like its airmail service Canada's railway mail service is one of the most extensive in the world.

The rural mail delivery organization provides direct postal facilities to residents in the rural sections of the country; approximately 5,322 rural mail routes were in operation in 1955, involving over 125,000 route miles and serving 438,252 rural mail boxes. Rural mail routes are generally circular in pattern and average about 24 miles in length. Considerable progress has been made towards the development of mail service by means of group boxes—a service intended for the more densely populated rural areas and for suburban residents not within the area of letter carrier delivery service. About 4,000 side services were in operation in 1955 to transport mail between post offices, railway stations, steamer wharves and airports, and 2,770 stage services operated to convey mail to and from post offices not located on railway lines. Transportation of mail by motor

vehicle on highways is being developed and over 150 such services are in operation. Many of these services replaced or reduced conveyance by rail. A local exchange of mails between offices on the route is effected by way-mail wallet. In 1955 there were approximately 767 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. In all, about 13,000 land mail service couriers are employed and travel in the neighbourhood of 50,000,000 miles annually. Land mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

The increase in postal business is one of the impressive features of Canada's economic development during the past ten years. Gross revenue for the year ended Mar. 31, 1955 reached an alltime high.

Section 1.—Post Office Statistics

Tables 1, 2 and 3 give the numbers of post offices in operation together with revenue and expenditure for the past few years.

1.—Post Offices in Operation by Province as at Mar. 31, 1952-55

Province or Territory	1952	1953	1954	1955

¹ Less than \$10,000.

Postage.—The gross revenue receipts shown in Table 2 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: \$57,178,573 in 1950-51, \$65,093,099 in 1951-52, \$67,182,548 in 1952-53, \$64,546,067 in 1953-54 and \$74,583,720 in 1954-55. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: \$39,979,297 in 1950-51, \$48,945,565 in 1951-52, \$52,733,682 in 1952-53, \$55,398,788 in 1953-54 and \$65,516,441 in 1954-55.

Section 2.—Auxiliary Postal Services

Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 4 shows the amount of money order business conducted by the postal service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in Chapter XXVI, Currency and Banking.

4.—Operations of the Money Order System, Years Ended Mar. 31, 1946-55

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

PART V.—THE PRESS

About 97 daily newspapers, counting morning and evening editions separately, are published in Canada, with an aggregate reported circulation of nearly 3,800,000—about 83 p.c. in English and the remainder in French. Ten of the papers enjoying circulations in excess of 100,000 account for more than half of the circulation and well over 90 p.c. of all newspaper circulation is in urban centres. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in that Province for over 60 years. Eleven of the 13 French language newspapers published in 1954 were established in Quebec Province, and one each in the Provinces of Ontario and New Brunswick.

Weekly or monthly publications include a considerable variety of foreign language publications including Ukrainian, German, Yiddish, Polish, etc. Weekly newspapers serve more people in rural communities than do the dailies. They cater to a limited local interest but, within the areas they serve, exercise an important influence.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 95 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is in effect a partnership through which each member newspaper provides to its fellow members the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The British United Press, privately owned and affiliated with the United Press, with twelve bureaux, also provides a service of Canadian and world news, news photographs and related features for Canadian newspapers, radio and television stations. There are as well special news services operated by affiliated newspapers and individual newspapers. Several foreign news agencies have representatives in Canada to supply and interpret news of Canadian origin, as have several of the leading United Kingdom and United States newspapers. Most of the latter are located at Ottawa.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements: for these, A.B.C. 'net paid' figures were used. However it is difficult to obtain reliable circulation figures for many weekly newspapers that do not subscribe to the Audit Bureau. Here total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

In compiling magazine circulation, total net paid figures as reported by publishers to the Audit Bureau (including bulk sales) were used. Where such figures were not available—and this was rare—publishers' minimum claims or sworn statements were accepted.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated: it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

Complete coverage of the business of wholesale and retail trades and of service establishments is attempted only as part of the decennial census. The first such detailed survey was taken in connection with the 1931 Census and related to business transacted during the calendar year 1930. Similar detailed records were again secured with the 1941 and 1951 Censuses. The results of the 1930 and 1941 Censuses of Merchandising and

* Prepared in the Merchandising and Services Section of the Industry and Merchandising Division, Dominion Bureau of Statistics.

Service Establishments are contained in Vols. X and XI of the Census reports for those years and the results of the 1951 Census of Distribution in Vols. VII and VIII of the 1951 Census reports. Summary data for 1951 are given in the 1955 Year Book, pp. 953-977.

The information collected at the census is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades—sample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period.

Current information available on the more important phases of the distributive trades is given in the following Subsections. Estimates for the years prior to 1951 have been revised in accordance with the Census base.

Subsection 1.—Wholesale Trade

Wholesale Sales.—Following the completion of the 1951 Census an improved and extended sample of wholesale businesses was selected and estimates of wholesale trade produced. Table 1 covers only the field of wholesalers proper, that is, those firms which perform the function of buying merchandise on their own account for resale and generally warehousing and delivering to customers. Estimated sales shown are subject to possible revision resulting from further refinements in the sample and in estimating procedures.

1.—Wholesale Sales by Kind of Business 1951-54

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

¹ Times per year—cost of goods sold divided by the average of beginning and year-end inventories.**Subsection 2.—Retail Trade**

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply.

The 1951 Census established a new base of retail sales from which estimates for subsequent years are projected and to which the 1941-51 estimated sales are revised. The values of retail sales shown by province for the years 1930-54 in Table 3 and by trade for 1951-54 in Table 4 are not adjusted for price changes.

Retail Chain Stores.—Sales of retail chain stores exceeded \$2,000,000,000 in 1953, continuing the consistent expansion occurring each year. The store employees of the 7,835 outlets were paid \$171,167,000 in salaries and wages. Food and beverage trades with sales of \$1,265,514,000 accounted for more than half of the total chain store business in 1953.

Operating Results of Retail Chain Stores.—The 1953 operating results of the nine selected kinds of chain stores shown in Table 7 indicate a general increase in gross profit ratios but little change in net profit as compared with 1952. Increased operating expenses in most trades offset the gain in higher gross profit ratios. The operating characteristics of food stores as compared with the other specified trades are evident from the following table.

7.—Operating Results of Retail Chain Stores for Selected Kinds of Business 1953

Operating Results of Independent Retail Stores.—This biennial survey is alternated with retail chain stores and wholesale trade, both of which appear in this volume. The 1952 results of twenty trades of the independent store type were shown in the 1955 Year Book, p. 978. The 1954 results will appear in the next edition.

Motor Vehicle Sales.—Sales of new passenger cars decreased from the record year of 1953 but remained at a high level during 1954. Sales of trucks and buses were lower than in any year since 1949.

Farm Implement Sales.—All regions except the Province of Saskatchewan registered a decrease in farm implement and equipment sales in 1953. The decrease was spread over a large variety of equipment. Sales of repair parts, which are not recorded below, amounted to \$31,818,818 in 1953, a small increase over the 1952 figure. Sales by province are shown for 1952 and 1953 in Table 9 and by type of equipment in Table 10.

Sales Financing.—Financing of retail instalment sales decreased in 1954 as compared with 1953, both consumer and commercial and industrial sectors contributing to the drop. Balances outstanding at the close of the year were also lower as is shown in Table 11. Motor vehicle sales and financing are given in Table 12 where it is shown that approximately the same proportion of vehicles were financed in 1954 as in the two previous years.

Retail Consumer Credit.—The 1951 Census provided a new base for credit data and serves three purposes: as the measurement of credit to which previous estimates should be revised; as the benchmark from which to project current estimates; and as a new universe from which to select a new sample of stores. Estimates based on that new sample are in course of tabulation at time of writing. The figures in Table 13 are calculated on the former sample revised to the 1951 Census base and may be revised again depending on the extent to which the new and the old sample trends differ.

Subsection 3.—Service Establishments

Service establishments as defined in the Census of Distribution include all those places of business whose major source of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreational such as motion picture theatres and bowling alleys; personal services such as laundries and dry cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Theatres.—The receipts of motion picture theatres, which had been increasing steadily up to 1953, registered a drop in 1954, most of which was accounted for by lower receipts of regular theatres in Ontario. All other provinces, except Quebec and New Brunswick, reported increases in this comparison. Drive-ins have shown the greatest development among the theatres in recent years. It is interesting to note that, while in 1949 there were 30 such establishments with receipts of \$1,393,760, in 1954 the number had increased to 230 with receipts of \$6,316,947. Community establishments increased from 469 to 645 in the same comparison.

14.—Motion Picture Theatres and Receipts by Province 1950-54

NOTE.—Figures include, in addition to regular theatres, establishments in which motion picture entertainment is provided by community organizations such as churches, lodges, Boards of Trade, etc., as well as drive-in theatres. Halls serviced by itinerant operators are not included. Receipts are exclusive of amusement taxes.

Section 2.—The Marketing of Agricultural Products

The following special article, prepared by the Marketing Service of the Department of Agriculture, covers the general movement of farm-produced foods from producer to consumer, with the exception of the grain trade which is dealt with separately in Subsection 1. Livestock marketings, treated briefly in the article, are covered in greater detail in Subsection 2.

MARKETING FARM-PRODUCED FOODS

A constantly widening choice of farm-produced foods, either fresh, canned, frozen or otherwise processed, is available to the Canadian consumer. Through the medium of research and experimentation in such fields as plant and animal breeding, soil fertilization, insect and disease control, and work methods, producers are able to supply more desirable kinds and varieties of products to meet specific needs and preferences of the fresh market and of processors. Also, improved methods of storage and transport have made the various kinds of farm-grown perishables, in suitable fresh or processed forms, widely available through most of the year. These, together with imports, provide a much steadier supply and a greater variety than in past years.

The marketing trend during the present century has been to shift increasingly difficult procedures from the farmer to the specialist. Well qualified and equipped packing plants, boards, agencies, etc., are today playing a major role in the preparation and distribution of agricultural food products. While this trend may have resulted in higher marketing costs it has also been productive of superior quality products, and costs to the consumer may well be moderate in relation to value received.

The current trend in the collection and centralization of farm products at processing or packing points has often resulted in fewer plants; as exemplified by large dairy plants replacing local cheese factories and creameries and by the establishment of packing plants in commercial production areas. Purchase from farmers on a graded basis is widespread

and the grading is often carried through to the consumer. Many products are moved from farms by truck, rail movement having been largely replaced for such items as milk and cream and for most of the livestock. On the other hand the railways, by the introduction of improved refrigerator cars and faster, more reliable schedules, have met the needs for the rapid and often long haul of perishable fresh and processed products. However they have had to share the growing traffic with refrigerated and other heavy trucks for hauls of all distances, but particularly short and intermediate movements.

A practice closely associated with transportation is pre-cooling of fruits and vegetables to be shipped fresh or to be stored. Of a similar nature is the pre-heating of cars or trucks for winter transport. Optimum temperatures for shipment and storage have been experimentally determined and the practices of shippers modified as necessary. The Canadian climate, with its short growing season and rigorous winter, makes it necessary to store some home-grown farm products and also certain products imported from distant growing areas. The increase in cold storage cubic capacity in the period 1948 to 1953 was about 25 p.c. The rate of growth for freezer space was higher than for cooler space, reflecting the increasing demand for frozen foods in processing and also for home consumption.

The wholesaling of food has been characterized recently by a tendency for integration with retailing and even with processing. That is, chain retailers have provided their own wholesale facilities in each large city—a co-ordinated food receiving and shipping plant. Some of the chains control farm-product processing plants organized to fill the needs of the chain outlets.

The comparatively recent development of the self-service type of retail store has revolutionized retail merchandising and has been responsible directly or indirectly for other trends such as consumer-size packaging and open refrigerated display cases. At one time self-service was generally considered to be impractical for produce and meat departments largely because of the lack of suitable packaging material that would also enable the prospective purchaser to see the contents. The introduction of transparent film in 1924 was a milestone in food merchandising and since then the improvements and refinements in both the material and in packaging techniques have resulted in its application to a great variety of agricultural food products. Further impetus was given to the self-service trend in retail stores by rising wage scales and the shortage of labour in the immediate post World War II years. The large staff required for the maintenance of bulk displays and individual selection and packaging for the customer has been substantially reduced by prepackaging. From the consumer's point of view the prepackaged product facilitates shopping and has established new standards in sanitation and cleanliness. It also enables the purchaser to identify the product by brand or trade name and by grade. Superior quality merchandise properly identified attracts repeat business while inferior quality can be recognized and rejected. Another advantage to the consumer is the fact that many commodities are trimmed and washed and excess parts of the product discarded.

While the self-service principle has been applied primarily by the larger chain organizations it is employed in modified form by many independent retailers and those in smaller communities. It should be mentioned that despite the rapid development of chain stores of various kinds in urban areas in recent years the independents continue to account for the greater volume of sales. The proportion in 1955 was 59 p.c. compared with 67 p.c. in 1949. Credit is not generally available at chains and for this and reasons of convenience the independent retailer continues to be popular.

Steadily increasing population and rising income levels in the war and postwar years have resulted in a greater demand for the constantly widening variety of foods in new forms which producers, processors and marketing agencies have to offer. These population and income considerations, together with technological developments, have made possible a substantial shift in food preparation from the kitchen to the factory. The reduction in time required for home food preparation together with the desire to attain a higher standard of living have induced many married women to secure employment outside the home. Kitchen shortcuts are of obvious value to such families.

DAIRY PRODUCTS

New methods of marketing milk and dairy products have affected the process of marketing from the farm through to the retail store. Today the farmer ships his cans of milk direct to the factory or city milk plant by truck, whereas formerly they were taken from the farm by wagon, perhaps to be transferred later to a milk train if they were to be sent long distances. The latest transportation development relieves the farmer still further by eliminating cans entirely. In a few areas tank trucks visit farms daily and siphon milk directly from large tanks installed by the farmer. Tank trucks have also come into use to move milk between dairy factories.

Improvement in methods of transportation has been one of the major reasons for the increase in the size of dairy factories, permitting them to draw milk from larger areas than formerly. The growth of large centres of population has been a contributory cause, especially in the increase in size of city dairies. Another factor tending to increase the size of dairy factories is that much of the modern manufacturing equipment can be used economically only by factories that receive milk in large quantities. The spray process of drying milk is replacing the older roller process. Spray powder is better for many purposes than roller powder and spray driers usually have a larger capacity than roller driers, so the size of milk powder plants has tended to increase. The continuous butter-making process, by which cream fed into one end of a complex machine emerges as neat one pound prints at the other, has been recently installed in several Canadian factories. The continuous butter-making machines can be used to best advantage only in plants receiving considerable quantities of cream.

Improvement of quality has been an important factor in the modernization of the marketing of dairy products. Pasteurization of fluid milk has been practised more generally over the years. "Flash" pasteurizers have been developed which do not affect milk flavour as did the older types. Quality of butter, cheese and concentrated products has come under close scrutiny by governments and the dairy industry, and government grade designations have become widely accepted as indications of high quality.

In addition to improving the quality of its products, the dairy industry has served the consumer by giving him a greater variety from which to choose. Process cheese, a product made by grinding cheddar cheese and treating it with other ingredients, has become increasingly popular as have cheese spreads which can be applied easily to bread or crackers and double as cheese sauce when heated.

For many years scientists have been looking for products which have all the desirable qualities of fresh milk but which can be more easily transported and stored. Although no completely satisfactory substitute for fresh milk has yet been developed considerable progress has been made. In the past year or so, 'instant' dry skimmed milk products have appeared on the market. 'Instant' powder can be rapidly converted to liquid skimmed milk by adding water and stirring. In the powder form, the product can be stored without refrigeration. Evaporated milk has also shared as a replacement for the fresh product in areas where fluid milk is not readily obtainable and is also widely used for feeding infants. Canadians use more evaporated milk per capita than the people of any other country.

Perhaps the most striking changes of all, from the point of view of the consumer, are those that have occurred in the merchandising of dairy products in retail stores. Gleaming counters filled with light weight disposable cartons of milk, attractively packaged butter, and an assortment of cheeses beyond the imagination of consumers of a decade ago, are a familiar sight and a welcome one to the busy housewife intent on providing her family with a variety of good foods.

LIVESTOCK AND MEATS

Canada continues to produce a plentiful supply of meats, providing for a fairly high domestic consumption with a surplus for export, although the latter is gradually diminishing as the population increases.

Increasing transportation costs and the development of refrigeration have tended to reduce the shipment of live animals to distant markets. It is more economical to slaughter the animals close to the production area and ship the surplus product to deficit areas. The same factors are tending toward some decentralization of the packing industry. There is less country slaughter, more of the meat supplies for small towns and villages being delivered under refrigeration from inspected plants.

Prepackaging of meat before it reaches the retail counter is a trend well under way. The wrapping films now in use have been developed mostly since 1945. A growing proportion of all meats are retailed on a self-service basis but frequently in the same store there is a choice between self-service or butcher service. This type of merchandising is offered mainly in chain stores and in other large city stores. The constantly increasing consumer demand for ready-to-serve foods has resulted in the appearance of a great variety of canned and otherwise processed meat and meat products.

POULTRY AND EGGS

The poultry industry is rapidly assuming the characteristics of a manufacturing business. Improvements in housing, nutrition, breeding and management practices of this industry have reduced the need for poultrymen to tie production to any season of the year. Natural production cycles, peak egg production and hatchings in the spring and the growth of young chickens in summer and autumn still persist, but most commercial poultrymen are now offsetting the marketing disadvantages of these cycles.

Although commercial egg marketings were about the same in 1945 as in 1954, there was a marked difference in the regularity of supply. In 1945 April marketings were four times larger than in October when production was at a seasonal low. In 1954 however marketings were more uniformly distributed throughout the year as illustrated by the fact that production in April was only one-quarter more than in August, which had become the low month.

The poultry meat supply pattern has been levelled out by the development of the broiler business in Canada. Broilers are light weight meat-type chicken marketed throughout the year at the age of ten to twelve weeks, weighing $3\frac{1}{2}$ lb. live weight. White breed turkeys, aged about three months, are also marketed throughout the year and weigh 7 to 8 lb. With the more regular supply of fresh poultry throughout the year, the cold storage holding of poultry and shell eggs is becoming less important and variation in price during the season is less pronounced; both of these trends have consumer appeal. The variation of Grade A Large egg prices has been reduced by more than one-third in recent years, and prices of broilers vary little throughout the year, which in turn tempers the price variation for other kinds of poultry.

Most eggs receive no processing but are sorted for quality and size before being packed in cases or cartons by producers or market agencies and sold as shell eggs. A small portion of these shell eggs intended for cold storage is dipped in a tasteless, odorless oil to help preserve quality but the tendency is for an increasing proportion of the shell eggs to move more directly from producer to the retail outlet through fewer handlers. Fewer storage eggs are reaching retail outlets. Instead surplus eggs are being broken for use as frozen egg and dried egg. Eggs in these forms, used chiefly by bakeries, confectioners and producers of dry cake mixes, enter households in forms unrecognized by consumers.

Changes in marketing poultry meat have been more spectacular than with eggs. Ten years ago poultry was commonly marketed only in the dressed form (blood and feathers removed). Although this form of marketing still dominates the poultry meat industry in Canada the development of the broiler industry is rapidly bringing about a change. Broilers are marketed in the ready-to-cook form either as whole chicken or in parts and as a result increasing quantities of heavy poultry are being sold in the ready-to-cook form. Large numbers of fowl are also being canned whole.

Increased domestic consumption of poultry products in recent years is largely attributable to the changes in production and marketing. Egg consumption has increased on a per capita basis as well as with population growth and the per capita consumption of poultry has gone up slightly more than one-third in the past few years. Poultry in Canada is no longer a Sunday treat but has become an everyday dish.

FRUITS AND VEGETABLES

Marketing of fruit and vegetable crops has been modernized by the use of new techniques in packaging, transportation, refrigeration and processing, particularly by freezing. Rapid movement by rail and truck and occasionally by air, plus temperature control, have enabled highly perishable fresh fruits and vegetables to move from one end of the continent to another at any season of the year. With this development the seasonal supply nature of many crops has virtually disappeared and consumers in the more northerly sections are no longer limited to short local seasonal production. Modern storage and transport facilities also tend to assist in distribution and thus aid in maintaining a balance of supply. This directly benefits the consumer by preventing abnormally high prices in areas or at times when local shortages occur.

The railway refrigerator car has long been important in moving fresh fruits and vegetables to market. Besides icing the bunkers for cool air circulation around the shipment it had been the practice to 'top ice' lettuce and other crops that wilt quickly. A new 'vacuum pack' process now rapidly cools lettuce packed in cartons instead of wooden crates, after which it is promptly placed in refrigerated cars or trucks and requires only regular bunker ice to its destination. In the car that previously took 24,000 lb. of crate lettuce, 30,000 lb. of carton vacuum-packed lettuce may now be carried. Washing and sometimes waxing of fruits and vegetables now contribute to good appearance and keeping qualities.

The most recent and dramatic development in processing has been in fast frozen foods. By this method fruits and vegetables, the latter after a two minute steam blanching, are subjected to temperatures of -30°F. to -40°F. until hard frozen and then immediately placed in storage at 0°F. to -10°F. Fruit may be frozen in its natural state but sugar is usually added to enhance the flavour. This process has gained considerable impetus in recent years with the development of home freezers and food plants together with increased frozen food capacity in newer models of home refrigerators. Frozen products require low temperatures at all stages of distribution, a limiting factor in distribution at the retail level which is rapidly being overcome. Frozen food cabinet space in retail outlets, particularly in the new supermarket type of stores in urban areas, has greatly expanded. Smaller retail stores and those in smaller communities are gradually installing the necessary equipment and the difficulties of delivery in small lots to serve such stores are gradually being overcome. The choice in frozen foods is also being constantly enlarged.

Another aspect of the frozen food industry of indirect concern to the consumer is the extent to which quick freezing is being utilized to store products for eventual use in manufacture. For instance in the manufacture of strawberry and raspberry jams, the use of fruit preserved by the former SO_2 process is no longer permitted; this chemical preservation process has been replaced to a large extent by freezing. In the manufacture of soups, frozen vegetables have entirely replaced vegetables in brine. Production of frozen fruits and vegetables in 1954 for all purposes, plus imports, approximated 20,000 tons or seven times the volume of ten years ago.

Constant improvements are being made in the long established preservation technique of canning. The time lag between harvesting and processing is being steadily reduced by improved mechanical devices and methods. This results in retention of flavour and improvement in appearance of the finished product. The vacuum pack method for corn is typical; the process is quicker and hotter and the product tastier and more attractive to the eye. High temperature flash pasteurization of tomato juice has improved flavour and keeping qualities.

The baby food section of the canning industry has expanded greatly and a wide variety of such products is now available. Production of 26,462 tons of canned infant foods in 1954 was nearly six times the output of ten years earlier. Another interesting development in canning is the increase in production of canned pet foods. The output of canned dog and cat food in 1954 amounted to 42,881 tons compared with only 59 tons ten years ago.

Dehydration, employed quite extensively during the war years for the Armed Forces to reduce bulk, is no longer used to the same extent as a method of preservation for fruits and vegetables. Dehydrated onions, usually in the form of powder, and apples are the

only two products of any importance today, although dehydrated soups continue to be fairly popular. A combination of dehydration and freezing is used for citrus juices sold in frozen concentrated form. Concentrated but not frozen tomato juice is also a new product on the Canadian market.

FOOD CONSUMPTION

In examining levels of food consumption as marketing methods have been improved, it is necessary to look at trends for various kinds of food. The more perishable foods and the so-called 'protective' foods supply proteins and vitamins to the human body. Bulk foods and starchy foods have a necessary place in a good diet but tend to be cheaper. A better diet based on sustained good income and more effective production and merchandising methods might be expected to emphasize meats, fruits and vegetables, and some dairy products while per capita consumption of cereals, potatoes and sugars would tend to decline. National per capita averages of consumption since 1950 moreover do indicate an upward trend for meats, fruits, poultry and eggs. Cereal consumption has declined from year to year, and irregular declines have occurred also for potatoes, sugars and syrups. Milk and cheese consumption has been slightly upward.

Subsection 1.—The Grain Trade

Marketing Problems and Policies 1954-55

Production, marketings and exports of the five major Canadian grains in 1954-55 were down from the unusually high levels of the three preceding crop years. Adverse weather and probably the worst rust epidemic on record in western Canada were largely responsible for the sharp reduction in outturn of the 1954 grain crop. Despite the relatively low yields of western grain crops in 1954 the pressure on Canada's grain storage and handling facilities remained unrelieved during the 1954-55 crop year. Record farm stocks of wheat, barley and rye and next-to-record farm stocks of oats and flaxseed at July 31, 1954 provided an unprecedented farm carryover of old-crop grain for the end of a crop year. As a result of the unusually tight storage position the Canadian Wheat Board had to keep under continuous review the situation with respect to the provision of adequate supplies of the various grains at the right time and in the desired positions to meet both domestic and export commitments. At the same time the Board endeavoured to ensure all producers the opportunity of delivering grain in as equitable a manner as possible. As in recent years, marketing arrangements for wheat, oats and barley in western Canada in 1954-55 continued under the system of compulsory crop-year pools administered by the Board. Other grains in western Canada and all grains in eastern Canada continued to be sold on the open market.

At the beginning of the 1954-55 crop year the Board established an initial delivery quota of 100 units, each being the equivalent of 3 bu. of wheat or 8 bu. of oats or 5 bu. of barley or 5 bu. of rye. As conditions permitted, individual shipping points were transferred from initial to general quotas, under which producers were permitted, as in 1953-54, to deliver a certain number of bushels per 'specified' acre, the specified acreage consisting of the permit holder's acreage seeded to wheat (other than Durum), oats, barley and rye plus his acreage in summerfallow in 1954. General delivery quotas were gradually increased from 2 to 8 bu. per specified acre at individual stations as space became available, with all except 28 closed stations being on the 8 bu. quota by July 27, 1955.

Preliminary data indicate that total marketings of the five major grains in western Canada in 1954-55 amounted to about 524,600,000 bu. compared with 608,300,000 bu. in 1953-54 and the ten year (1944-45-1953-54) average of 561,200,000 bu. Combined exports of the same grains, which include wheat flour, rolled oats and oatmeal, malt and pot and pearl barley in grain equivalent, totalled 370,700,000 bu. as against 441,500,000 bu. in 1953-54 and the ten year average of 380,700,000 bu. Mainly as a result of the smaller 1954 crop, year-end stocks of grains showed a substantial drop from the record July 31, 1954 levels. Combined stocks of the five major grains in all positions at July 31, 1955 were estimated at 694,900,000 bu., a drop of 22 p.c. from the previous year's record 895,200,000 bu. but 89 p.c. above the ten year average of 363,700,000 bu.

² Less than 50,000 bu.

Wheat.—Supply and Disposition.—Stocks of wheat on hand at the beginning of the 1954-55 crop year amounted to a record 601,700,000 bu., representing the sixth consecutive annual increase from the unusually low level of 77,700,000 bu. on hand at July 31, 1948. Total crop-year supplies, consisting of the record carryover, the 1954 crop of 308,900,000 bu. and imports of 200,000 bu., amounted to 910,800,000 bu., the fourth highest on record.

² Less than 50,000 bu.

Price and Marketing Arrangements.—The marketing of western Canadian wheat during the 1954-55 crop year was again conducted by the Canadian Wheat Board on a one year pool basis with the initial payment set at \$1.40 per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. The initial payment for No. 1 C.W. Amber Durum was again established at \$1.50 per bu. No adjustment or final payments had been announced by Nov. 30, 1955 on the 1954-55 pool. However on Nov. 6, 1954 an interim payment of 10 cents per bu. on 1953-54 deliveries of wheat was announced. This payment covered all 1953-54 deliveries with the exception of certain special varieties that had not yet been sold in sufficient quantity to justify an interim payment. The final payment on the 1953-54 pool was announced on May 16, 1955 and averaged 6.384 cents per bu. on farmers' deliveries of 398,000,000 bu. Prior to the deduction of the Prairie Farm Assistance Act levy, the net price realized by producers in the 1953-54 pool for No. 1 Northern wheat, basis in store Fort William-Port Arthur or Vancouver, was \$1.56426 per bu. The corresponding realized price for the 1952-53 pool was \$1.81871 per bu.

Final payments to producers for wheat delivered to the 1954-55 pool will depend on the average prices at which the Board has been able to sell the various grades, as well as the costs incurred by the Board in carrying abnormally heavy stocks over an extended period of time.

The 1954-55 crop year coincided with the second year of the current three year International Wheat Agreement. Under its provisions Canada had an export quota of 152,300,000 bu. for 1954-55 and, according to the final report on the year's transactions, Canadian sales under the agreement totalled 109,200,000 bu. Sales under the Agreement were quite widely distributed, with all but 16 of the 44 importing countries included in the pact purchasing wheat and/or flour from Canada. The larger purchasers from Canada under the Agreement were: the Federal Republic of Germany 21,400,000 bu.; Japan 16,800,000 bu.; Belgium 15,000,000 bu.; and the Netherlands 10,800,000 bu. The greater part of Canada's wheat trade during 1954-55 was carried on in Class II wheat (i.e., wheat exported outside the provisions of the International Wheat Agreement). The leading market for Class II wheat was the United Kingdom, that country accounting for about 89,200,000 bu. of wheat as grain and the equivalent of an additional 12,600,000 bu. in the form of wheat flour. The combined Canadian exports of 251,900,000 bu. of wheat and flour went to 86 countries, territories and colonies during the crop year.

During 1954-55 domestic sales of wheat, with the exception of Durum, were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Throughout the crop year an additional 10 cents per bu. over the IWA price was charged on domestic sales of Durum. During the entire 1954-55 crop year Class II prices for all grades of wheat except Durum coincided with the IWA and domestic quotations. All through the season Class II Durum sold at a substantial margin over Durum sold under IWA or for domestic use.

Exports of wheat and flour (in terms of wheat) during 1954-55 amounted to 251,900,000 bu., about 1 p.c. below the 255,100,000 bu. in 1953-54 but well above the prewar (1935-36—1939-40) average of 182,500,000 bu. The 1954-55 total exports consisted of 211,300,000 bu. of wheat as grain and the equivalent of 40,600,000 bu. of wheat flour. Total domestic (commercial and farm) disappearance of wheat increased from 140,800,000 bu. in 1953-54 to a level of 159,100,000 bu. in 1954-55. This total was also slightly above the 1944-45—1953-54 average of 150,600,000 bu. and surpassed by a wide margin the prewar average of 114,400,000 bu. The upward movement in domestic use during 1954-55 was largely attributable to the substantial increase in the amount of wheat fed to livestock. As a result of lower supplies and increased domestic use year-end stocks of wheat at July 31, 1955 dropped to 499,700,000 bu. but were still substantially above average.

Other Grains.—*Supply and Disposition.*—Preliminary data on supply and disposition of the major Canadian grains for the crop year 1954-55 together with revised and more detailed data for 1953-54 are set out in Table 19. Carryover stocks of wheat, barley and

rye were at record levels at July 31, 1954 but total crop-year supplies of these grains were lower than in 1953-54 because of much smaller crops in 1954. The combined effect of lower carryover stocks and a small crop caused a substantial reduction in total supplies of oats but supplies of flaxseed were only slightly lower than in 1953-54 since the increase in production virtually offset the reduction in carryover stocks.

Total exports of coarse grains in 1954-55 were down considerably from those of 1953-54, although still above the ten year (1944-45—1953-54) average for barley, rye and flaxseed. The sharpest drop occurred in exports of oats (including rolled oats and oatmeal) which fell from 70,700,000 bu. in 1953-54 to 22,200,000 bu. in 1954-55. Exports of barley (including malt and pot and pearl barley in barley equivalent) amounted to 80,900,000 bu., the third highest on record, and nearly double the ten year average of 41,900,000 bu. Rye exports at 9,300,000 bu. were sharply below the record 1953-54 total of 16,800,000 bu. but still slightly above the ten year average. The only increase over 1953-54 was registered by flaxseed exports which at 6,300,000 bu. were the highest since 1943-44. Domestic use of all grains continued at a high level in 1954-55 and this, together with fairly sharp reductions in total supplies, caused a substantial reduction in year-end carryover stocks from the record or near-record levels of July 31, 1954.

Price and Marketing Arrangements.—Marketing of western Canada oats and barley in 1954-55 was again carried on through compulsory crop-year pools administered by the Canadian Wheat Board. Initial payments for both grains were made on the same basis as in 1953-54, i.e., 65 cents per bu. for No. 2 C.W. oats and 96 cents per bu. for No. 3 C.W. 6-Row barley, in store Fort William-Port Arthur. Increases in initial payments of 10 cents per bu. for barley and 7 cents per bu. for oats were made effective on Mar. 14 and Mar. 21, 1955 respectively and made retroactive on all deliveries of these grains since Aug. 1, 1954. Details of final payments on the 1954-55 barley pool were announced on Nov. 21, 1955 while those on the oats pool were made known on Nov. 30, 1955.

Final payments on the 112,428,326 bu. of barley delivered to the 1954-55 pool averaged 5.814 cents per bu. after deduction of payment expenses and the 1 p.c. Prairie Farm Assistance Act levy. Total prices (basis in store Fort William-Port Arthur) realized by producers for representative grades, after deducting carrying charges in country and terminal elevators, Board administrative costs, etc., but before deducting the 1 p.c. PFAA levy, were \$1.10501 per bu. for No. 3 C.W. 6-Row barley and \$1.00652 per bu. for No. 1 Feed barley. Final payments on the 69,581,184 bu. of oats delivered to the 1954-55 pool averaged 5.432 cents per bu. Total prices realized by producers for representative grades, on the same basis as for barley, were \$0.80743 for No. 2 C.W. and \$0.71351 for No. 1 Feed oats.

Preliminary data indicate that about 13,200,000 bu. of rye and 8,800,000 bu. of flaxseed were delivered by farmers in western Canada in 1954-55, both these grains being sold on the open market. In eastern Canada, where commercial grain production is on a much smaller scale, all grain continued to be sold on the open market.

Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—Although the volume of grain handled at eastern elevators in the 1953-54 crop year was sharply below the record total of 1952-53 it compared favourably with the years prior to the unprecedented export movement in the two year period ended July 31, 1953. Receipts and shipments of each of the five major grains in 1953-54 were down from those of the previous crop year, with the greatest decreases in volume being registered by wheat and barley. Total receipts of the five grains in 1953-54 amounted to 367,701,383 bu., a decrease of 45 p.c. from the 1952-53 level, while total shipments at 354,181,460 bu. were 46 p.c. below those of 1952-53.

21.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1950-54

NOTE.—Figures for the crop years ended 1922-49 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

Grain Inspections.—Reflecting the congestion existing in storage facilities the volume of grain inspected by the Board of Grain Commissioners for Canada in the crop year ended July 31, 1954 was about 21 p.c. lower than in the preceding crop year. Inspections of wheat at 349,377,385 bu., and barley at 113,410,889 bu. were down by 27 p.c. and 22 p.c. respectively while inspections of oats at 106,662,848 bu. were up slightly from those of 1952-53. The only other grains registering increases in inspections in 1953-54 were flaxseed, buckwheat, peas and soybeans. Inspections of wheat, oats and barley accounted for 94 p.c. of the total Canadian grain inspected in 1953-54 as against 95 p.c. in 1952-53.

Lake Shipments of Grain.—The 1954 navigation season opened officially on Apr. 20, nineteen days later than the official opening in 1953, and closed on Dec. 14, the same date as in 1953. During the season total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to 292,829,921 bu., down sharply from the 1953 total of 441,983,089 bu. All grains shared in the decrease, with reductions in wheat, oats and barley amounting to 33 p.c., 40 p.c. and 27 p.c. respectively.

¹ Includes following shipments direct to Europe: wheat 251,539 bu. and barley 695,339 bu. and includes 259,524 bu. of wheat lost in shipwreck. ² Includes following shipments direct to Europe: wheat 42,266 bu. and barley 316,216 bu.

Wheat Flour.—After reaching a peak of 28,588,000 bbl. in 1946-47, Canadian wheat flour production dropped to a postwar low of 20,259,000 bbl. in 1949-50. Production in each of the following three crop years was only slightly below the five year (1945-46—1949-50) average of 23,985,000 bbl. A rather sharp drop occurred in 1953-54 however and a further slight decline in 1954-55 when production amounted to 20,717,000 bbl. During the crop year 1954-55, 71.7 p.c. of milling capacity was utilized compared with 70.1 p.c. in 1953-54.

Exports of wheat flour during recent years have followed approximately the same pattern as production, dropping from the 1946-47 peak of 16,896,000 bbl. to 9,003,000 bbl. in 1954-55. The 1954-55 exports of wheat flour amounted to approximately 43 p.c. of production, a slightly smaller proportion than exported during the preceding few crop years.

Subsection 2.—Livestock Marketings*

Marketings of all classes of livestock were greater in 1954 than in 1953. Increases in total movement through recorded commercial channels amounted to 13.3 p.c. in cattle, 10.0 p.c. in calves, 1.6 p.c. in hogs, and 4.3 p.c. in sheep. Slaughter classes of steers sold at stockyards and packing plants increased 7.0 p.c. over 1953 to total 712,881 head. There was a decrease of 3.0 p.c. in the heavier grades over 1,000 lb., but the total of those graded

* For more detailed information, see DBS annual, *Live Stock and Animal Products Statistics*, and the Department of Agriculture publication, *Livestock Market Review*. Statistics of livestock and poultry are given at pp. 428-430 and 436-437 respectively of this volume.

under 1,000 lb. increased by 18 p.c. Heifer gradings increased 19.0 p.c., fed calves 18.0 p.c. and cows 23.0 p.c. over the previous year. Steers constituted a slightly lower proportion of slaughter cattle, 36.7 p.c. in 1954 as compared with 39.1 p.c. in 1953. Feeder cattle shipments from yards and plants and on through-billings to country points in other provinces totalled 264,727, an increase of almost 20 p.c. over 1953. Quality of hogs was again somewhat lower than in the previous year. Grade A hogs constituted 26.0 p.c. of gradings in 1954 as compared with 27.3 p.c. in 1953 and 31.3 p.c. in 1951. The proportion in Grade B1 rose to 44.0 p.c. and Grade C comprised 9.1 p.c. in 1954 as compared with only 4.2 p.c. in 1950. Manitoba and the Maritime Provinces, notably Prince Edward Island with 53.6 p.c. Grade A carcasses, indicated improvement in hog quality. The price differential between Grades A and B1 hogs was increased to \$1 per cwt. on Apr. 12 from the 40 cents per cwt. formerly paid, to offer greater inducement for quality production. Marketings of sheep and lambs showed the third successive annual increase and about 60 p.c. of the 523,625 animals graded alive were 'good' lambs. Movement of feeder lambs at 39,307 was the largest since 1951.

Section 3.—Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold storage methods in the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. At least as some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise all movements into and from such places of storage.

Subsection 1.—Licensed Grain Storage

Total grain storage in Canada licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada at Dec. 1, 1954 amounted to 580,969,000 bu., an increase of 19,464,000 bu. over the level at Dec. 1, 1953. Slightly over 15,000,000 bu. of this increase occurred in western country elevators, reflecting the need for providing additional storage resulting from the cumulative effect of unusually large western Canada grain crops in recent years. Licensed grain storage capacity in Canada reached a peak of 603,000,000 bu., at Dec. 1, 1943 but, following the disposal of heavy wartime stocks, declined to 428,000,000 bu. at Dec. 1, 1947. Since that date capacity has increased each year.

Although the 1954 western grain crop was below average in volume, elevator storage space continued to be at a premium throughout the 1954-55 crop year as a result of the backlog of unusually large farm stocks of old-crop grain. Consequently farmers' marketings of western grain continued to be governed to a large extent by space made available in country elevators as grain moved forward into the domestic and export market. As indicated in Table 27 there was relatively little variation in the proportion of elevator space occupied at Dec. 1, Mar. 30 and July 31 in the 1954-55 crop year. Although information is given in the table for only three dates in the crop year, weekly data on stocks of grain in various commercial positions may be obtained from the *DBS Grain Statistics Weekly*.

* Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

27.—Licensed Grain Storage Capacity and Grain in Store, Crop Years 1953-54 and 1954-55

NOTE.—Because these figures are exclusive of stocks in transit or in eastern mills, they are lower than those shown in Table 15, p. 915.

Subsection 2.—Cold Storage and Storage of Foods

Cold Storage Warehouses.—Under the Cold Storage Act (R.S.C. 1952, c. 52), as amended (R.S.C. 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is open to the public; (2) semi-public, or those which store foods and food products and which, though retaining part of the space for the products of the owner, allot the remainder to the public; (3) private or those which store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and which may in addition cut, process, chill and freeze foods and food products for storage in lockers; and (5) bait depots, having space used solely or principally for freezing and storing bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general those owned and operated by firms trading in the goods stored in the warehouse are considered as private, though most of these places rent space to the public when it is not required for their own purposes.

Though the figures in Tables 28 and 29, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.

Cold Storage of Fish.—The normal seasonal trend in holdings of frozen fish in Canada was followed in 1954. Stock levels generally reflect the pattern of production. A net movement out of storage takes place during the period between November and April when adverse climatic conditions in the fishing areas result in decreased production. Storage stocks increase from May to October principally because that is the period of accelerated production. A considerable proportion of the fish frozen for holding in Canadian cold storages is destined for export to the United States where the pattern of production for these and similar species is much the same as in Canada. The accumulation of frozen fish in storage in Canada therefore occurs during the same period in which stocks increase in the United States. Canada's domestic consumption of frozen fish in general does not vary a great deal from season to season. The storage stocks of frozen fish held in Canada during 1954 were somewhat lower than in 1953 until the last three months of the year when they rose above the level of the corresponding period in the previous year.

There was a marked increase during 1954 in production of the principal groundfish species caught in Atlantic waters. The United States market for these species in the form of frozen fillets to be processed into fish sticks increased during the year. Stocks of groundfish fillets also exceeded 1953 levels during the second half of 1954 but stocks of frozen freshwater species were somewhat lower. Similarly holdings of frozen Pacific halibut, which is an important storage item, were lower throughout most of 1954.

31.—Storage Stocks of Fish by Month and Type 1953 and 1954

NOTE.—Stock totals are as at the beginning of each month; stocks of individual products are monthly averages.

Cold Storage of Dairy Products.—Cold storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres. Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses. Milk is placed in storage as soon as it is bottled and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Apples and Potatoes.—Cold storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extension of the marketing season generally, and increased production in some areas. The trend has followed the curtailment in shipments to traditional markets in the United Kingdom and other European countries after World War II. There has been an increase recently in the construction of both private and co-operatively owned storages, particularly in the Province of Quebec.

Potatoes are not ordinarily held in cold storage but recently there has been an increase in the construction of potato storage houses and warehouses, particularly in the commercial producing areas.

Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, usually on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

Subsection 4.—General Warehousing

Public Warehouses.—The summary statistics of the warehousing industry in Canada presented in Table 33 cover the operations of the majority of firms offering warehousing and storage facilities to the public. The 1954 statistics include returns from 185 operators as compared with 173 reporting in 1953. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Many public warehousing companies also operate a local moving and cartage service and others a motor carrier business, including long-distance moving. For some firms revenues from motor carrier activities represent a large percentage of total receipts. Small food lockers are not included except where they may be part of a general warehousing business.

Customs Warehouses.—Warehouses for the storage of imported goods are known as customs warehouses. These are divided into eight classes, as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others, or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air, those operated by railway companies and those operated by express companies; (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than purebred mares; (7) warehouses for the storage of animals not including horses for racing, and articles for exhibition or competition for prizes; (8) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

Subsection 5.—Bonded Warehousing and Storage of Wines

Bonded Warehousing.—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses there are those in which no manufacturing or production is carried on but which are being used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table 34 shows the quantities of distilled liquor, tobacco, cigars, and cigarettes in bond in recent years. In addition the year-end inventories of beer in breweries increased from 24,572,714 gal. in 1954 to 24,876,958 gal. at the end of 1955.

¹ Duty has been paid herein on the malt.² Duty solely on gallonage basis since 1954.

Storage of Wines.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.

Section 4.—Co-operative Organizations*

Co-operative enterprise has played and continues to play a considerable role in the marketing and service sectors of the Canadian economy. It is particularly important in the agricultural field where it has been prominent in the marketing of grain and is becoming increasingly so in the marketing of dairy products, livestock and tobacco and in the purchase of feeds, fertilizers and spray material, food products, petroleum products and automobile accessories, etc. It is estimated that co-operative associations marketed over 30 p.c. of all agricultural products entering commercial trade channels in the crop year ended July 31, 1954.

Altogether there were in operation in Canada at the end of July 1954, 2,590 marketing and purchasing, service, and fishermen's co-operatives (insurance co-operatives excluded). This was a decline of 182 in number as compared with the previous year but the membership reported at 1,366,002 in 1954 remained almost the same.

The total business of all marketing and purchasing co-operatives in 1954 amounted to \$986,300,000. The value of farm products marketed was \$733,000,000. Most of the decrease of \$141,700,000 as compared with 1953 may be traced to the lower volume of grain sold in western Canada and to a slightly reduced grain price. Sales value of farm products in British Columbia, Ontario and Quebec did not vary greatly from 1953. Sales of farm supplies and merchandise in 1954 amounted to \$234,600,000. Decreases in Alberta, Quebec, New Brunswick and Nova Scotia were not quite offset by small increases in the other provinces.

Total assets of co-operative marketing and purchasing associations, including the four large western grain marketing organizations, at July 31, 1954 amounted to \$418,887,674. Members' equity was \$182,894,163, made up of liabilities to members in the form of loans and deferred patronage dividends amounting to \$73,572,237 and of the net worth of \$109,321,926 including share capital, reserves and unallocated surplus. Liabilities to the public amounting to \$236,000,000 consisted mainly of short term bank loans obtained by the western grain marketing co-operatives to finance grain inventories held for delivery to the Canadian Wheat Board at guaranteed prices. For all other marketing and purchasing co-operatives the members' equity in 1954 amounted to \$119,700,000, or 67 p.c. of the total assets of \$179,300,000.

* Prepared under the direction of the Deputy Minister of Agriculture, by P. G. Muller, Economics Division, Marketing Service.

¹ Duplication exists in this column as some associations market produce as well as handle supplies. Some associations market more than one product and some handle many of the supplies listed.

Service co-operatives (other than life, fire and casualty insurance) numbered 418 in 1954 and reported a membership of 157,897 and services rendered to the amount of \$11,064,702. Such co-operatives provide housing, medical insurance, transportation, recreation facilities, telephone, printing, custom grinding, seed cleaning, and trucking facilities and there are some co-operative restaurants and boarding houses. In Saskatchewan over 200 community service co-operatives reported functions such as recreation, curling, skating and maintaining community halls but statistics covering these activities are not included with those of other service co-operatives because no business is transacted.

Co-operatives marketing fish and fish products operate in every province except Alberta and Manitoba. In 1954, 86 fishermen's co-operatives reported a membership of 11,679, sales of fish at \$14,915,246 and sales of supplies at \$2,771,827. Co-operatives handled about 9 p.c. of the total commercial fish marketings in Canada in 1954. The largest volume of business was handled by co-operatives in British Columbia, followed by Nova Scotia and Quebec.

Eleven co-operative wholesales operated in Canada in 1954, most of them engaged in supplying merchandise to their local co-operative members. In the eastern provinces, from Ontario to the Maritimes, they also act as central marketing agencies for farm products such as livestock, dairy products and wool but do very little processing or manufacturing, except of dairy products. In the west, co-operative wholesales operate coal mines, oil refineries, grease and oil blending plants and lumber mills but do not act as central marketing agencies for farm products. In the crop year ended July 31, 1954 they sold farm products valued at \$51,907,365 and supplies and merchandise amounting to \$96,850,083.

Farmers' mutual fire insurance companies today play an important role in the insurance field in Canada. In 1953 there were 402 of these in operation, having a net amount of insurance at risk of \$3,264,000,000. Co-operative life insurance is offered by at least three organizations and others specialize in automobile insurance, mutual benefit, fire and casualty insurance, hail insurance, fidelity and guarantee bonding, and marine insurance. In addition medical insurance is offered by 42 co-operatives, data for which are included in the service co-operative category.

Noteworthy in 1954 was the considerable amount of interest shown in the Canadian co-operative movement by other countries. Trainees from Egypt, Jamaica, Pakistan, Burma, India and Indonesia studied co-operation in Canada under the auspices of the Colombo Plan and the Food and Agriculture Organization of the United Nations. Of interest also were the important developments in co-operative manufacturing and processing which took place during the year. Co-operative wholesale associations reported the purchase of a chemical plant, the completion of an enlarged modern refinery, the acquisition of an abattoir and the building of a new warehouse. In New Brunswick the operations of a textile mill were taken over by the workers of a textile union.

Section 5.—Interprovincial Freight Movements*

Statistics on interprovincial trade are difficult to collect because there are no controls or barriers to it. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. Railway traffic is segregated into 99 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. Freight can however be imported by rail and exported by water, as with western grain which may be moved to the Ontario ports of Fort William and Port Arthur. Consequently the statistics of Table 40 must not be taken as a measure of total interprovincial trade: these figures indicate interprovincial movement of railway freight which is one aspect only of that trade.

* Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

¹ Figures for freight originating and freight terminating do not agree because freight that originates within a certain year does not all terminate within the same year.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the postwar period, the elaborate system of government control of trade that the war effort made necessary was gradually relaxed (*see* the 1948-49 Year Book, pp. 837-841) until, by the beginning of 1949, only those measures to protect domestic requirements and prevent the forcing upward of prices in the Canadian market remained; since then even these have practically disappeared.

Section 1.—Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners, which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect of grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that were taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period the Government acquired a considerable quantity of wheat and, in the 1935 session of Parliament, legislation was passed to serve the dual purpose of disposing of the holdings so acquired and at the same time arranging for the marketing of new crops.

An account of the organization and functions of the Board of Grain Commissioners appears in the 1941 Year Book, pp. 481-482. An article on the operations of the Canadian Wheat Board is commenced in the 1939 Year Book, pp. 569-580, and concluded in the 1947 edition.

Section 2.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end the legislation seeks to eliminate certain practices in restraint of trade, which serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

The first federal legislation in this field, enacted in 1889, is still effective in amended form as Sect. 411 of the Criminal Code and is the mainstay of Canadian anti-combines legislation. Generally speaking this Section forbids suppliers (manufacturers, wholesalers, retailers) to arrange among themselves to eliminate competition over a substantial part of any market by limiting production, restricting distribution or fixing prices.

Sect. 411 of the Criminal Code and the Combines Investigation Act (R.S.C. 1952, c. 314) are complementary pieces of legislation. The latter was enacted in 1923 and amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952. It repeats in Sects. 2 and 32 some of the substance of Sect. 411 but, while the latter relates chiefly to arrangements among separate firms, the former embraces any "merger, trust or monopoly", relating to a commodity, which has operated or is likely to operate to the detriment or against the interests of the public.

The Combines Investigation Act, in Sect. 34, also forbids a supplier of goods from prescribing the prices at which they are to be resold by wholesalers and retailers, i.e., the practice of "resale price maintenance". The supplier may, however, suggest resale prices as long as he does nothing to induce or require the trade to adhere to them.

* Revised by T. D. MacDonald, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

Sect. 412 of the Criminal Code deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with each other, by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; and it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the purpose or effect of his actions is to lessen competition substantially or eliminate a competitor.

These provisions, Sects. 411 and 412 of the Criminal Code and Sects. 2, 32 and 34 of the Combines Investigation Act, contain the substantive law relating to restrictive trade practices. The other provisions of the Combines Investigation Act relate to investigation and enforcement.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement; and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general enquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides that the courts, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention. The constitutionality of the Section providing for restraining orders, which was enacted in 1952, has been upheld by the Supreme Court of Canada.

In the years 1951-55 the following reports of enquiries under the legislation have been published:—

- (1) Manufacture, Distribution and Sale of Mechanical Rubber Goods; Tires and Tubes; Accessories and Repair Materials; Rubber Footwear; Heels and Soles; Vulcanized Rubber Clothing.
- (2) Distribution and Sale of Bread and Other Bakery Products in the Winnipeg Area, Manitoba.
- (3) Manufacture, Distribution and Sale of Fine Papers.
- (4) Distribution and Sale of Coarse Papers in British Columbia.
- (5) Purchase of Maple Syrup and Maple Sugar in the Province of Quebec.
- (6) Manufacture, Distribution and Sale of Electrical Wire and Cable Products.
- (7) Resale Price Maintenance in the Sale of Soap and Soap Products in the Montreal District.
- (8) Price Discrimination between Retail Hardware Dealers in North Bay, Ont.
- (9) Resale Price Maintenance in the Sale of Certain Household Supplies in the Chicoutimi-Lake St. John District, Que.
- (10) Distribution and Sale of Gasoline at Retail in the Vancouver Area.
- (11) Resale Price Maintenance in the Sale of China and Earthenware.
- (12) Resale Price Maintenance in the Distribution and Sale of Television Sets in the Toronto District.
- (13) Manufacture, Distribution and Sale of Wire Fencing in Canada.
- (14) Distribution and Sale of Coal in the Timmins-Schumacher area of the Province of Ontario.
- (15) Loss Leader Selling.

- (16) Manufacture, Distribution and Sale of Beer in Canada.
- (17) Manufacture, Distribution and Sale of Asphalt and Tar Roofings and Related Products in Canada.
- (18) Resale Price Maintenance in the Distribution and Sale of certain Household Appliances.
- (19) Manufacture, Distribution and Sale of Transmission and Conveyor Equipment and Related Products.

These reports are obtainable from the Queen's Printer or from the office of the Director of Investigation and Research, Ottawa.

Section 3.—Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Exportation of Power and Fluids and Importation of Gas Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.—On Nov. 26, 1949 Parliament passed the National Trade Mark and True Labelling Act (R.S.C. 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments for example has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act 1946 (R.S.C. 1952, c. 215) commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act (R.S.C. 1952, c. 292) prescribes the legal standard of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed towards the elimination of sales by short weight or short measure. The number of inspections made in the year ended Mar. 31, 1955 was 454,796 compared with 478,227 in 1953-54. The more important inspections comprised the following: weighing machines, including scales of all kinds, 228,243; measuring machines for liquids 78,033; weights 127,114; other measures 21,406. Total expenditure was \$726,001 in 1954-55 compared with \$688,425 in 1953-54 and total revenue \$670,147 compared with \$658,466.

Electricity and Gas Inspection.—Responsibilities of the Standards Division under the Electricity Inspection Act (R.S.C. 1952, c. 94) and the Gas Inspection Act (R.S.C. 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 174. During the year ended Mar. 31, 1955, 1,154,438 electricity and gas meters were tested as compared with 1,079,711 in the preceding year. Revenue derived from the testing amounted to \$856,354, and expenditure to \$691,031.

* Prepared by R. W. MacLean, Director, Standards Division, Department of Trade and Commerce, Ottawa.

1.—Electricity and Gas Meters in Use, Years Ended Mar. 31, 1946-55

1955.....	4,175,534	420,432	486,768	536	907,736

¹ Newfoundland included from 1950.

The Exportation of Power and Fluids and Importation of Gas Act (3-4 Elizabeth II, c. 14) was passed in 1955 to replace the Electricity and Fluid Exportation Act which came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada, nor gas be imported into Canada, without a licence. Total exports of electric energy during the year ended Mar. 31, 1955 amounted to 3,390,329,790 kwh. There was also a small export of natural gas and crude oil.

Section 4.—Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act, (R.S.C. 1952, c. 203) effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1951-55

Item	1951	1952	1953	1954	1955
Applications for patents..... No.	14,324	15,448	16,405	18,565	19,448
Patents granted..... " "	8,461	9,516	9,700	9,414	10,282
Granted to Canadians..... " "	627	708	742	606	570
Caveats granted..... " "	391	253	243	288	337
Assignments..... " "	11,437	11,621	12,525	13,127	20,062
Fees received, net..... \$	661,069	728,241	756,714	847,874	1,086,278

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 10,000 for the past ten years. Of the 10,282 granted in 1954-55, 7,719 or 75 p.c. were to inventors resident in the United States, 570 to Canadian residents and 1,009 to residents of the United Kingdom or other Commonwealth countries. Residents of France obtained 190, of Switzerland 166, of the Netherlands 191 and of other countries 437.

Printed copies of patents issued from Jan. 1, 1949 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Korea and Brazil.

* The material relating to patents and copyrights was revised by J. W. T. Michel, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by the Copyright Act (R.S.C. 1952, c. 55) in force since 1921. Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada ...in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol ...or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the Canadian *Patent Office Record*.

3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1951-55

Item		1951	1952	1953	1954	1955

Trade Marks.—The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Trade Marks Act (1-2 Elizabeth II, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954 former legislation enacted under the Unfair Competition Act, the Industrial Design and Union Label Act and the Shop Cards Registration Act. All correspondence relating to an application for registration of a trade mark or for the use of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

A *Trade Marks Journal* is published weekly giving particulars of every registration of a trade mark and every registration of a registered user, as well as other advertisements and rulings required under the Act. The required fee payable on application for registration of a trade mark is \$25 and for registration of a person as a registered user of a trade mark, \$20.

4.—Trade Marks Registered, Years Ended Mar. 31, 1951-55

Section 5.—Subventions and Bounties on Coal*

The major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 25 years, were designed to further the movement of Canadian coals to some portions of central Canada by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. Subventions have been regulated by Orders in Council as it has not been considered practicable to fix the assistance by statute owing to the frequent changes in the competitive situation.

The Canadian Coal Equality Act (R.S.C. 1952, c. 34—formerly known as the Coke Bounty Act) implemented one of the recommendations of the Royal Commission on Maritime Claims and was approved by Parliament on May 30, 1930. The bounty is paid on Canadian coal converted to coke and used in the manufacture of Canadian iron and steel and places the coal on a basis of equality with imported coal.

Bounties paid under this authority for the years 1950-54 were as follows:—

Section 6.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1954 provincial government liquor control authorities operated 674 retail stores.

Table 6 shows revenue from administration of liquor control by provincial and territorial governments. Further details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (fiscal year ended Mar. 31, 1954).

* Prepared by H. H. Harris, Administrative Officer, Dominion Coal Board, Ottawa. Additional information on subventions and bounties, summarized from the *Report of the Royal Commission on Coal, 1946*, is given in the 1947 Year Book, pp. 770-771.

6.—Provincial Revenue from Administration of Liquor Control, Year Ended Mar. 31, 1954 and Totals for 1953

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenues of the liquor authorities, but exclude general sales tax.

¹ Collections on liquor imported for blending purposes are included with import duty.

² Abolished.

³ Other than malt beer.

Value of Sales of Alcoholic Beverages.—The figures in Table 8 do not represent the final retail selling price of alcoholic beverages because when sold to licensees, only the selling price to the licensee is known. Furthermore these sales figures should not be construed as representing the amount spent by individual Canadian consumers because sales to non-residents visiting Canada and sales to businesses, governments and foreign embassies in Canada are included.

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures and the statistics presented in each Section are not comparable with those given in the other Sections.

Section 1 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section however gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in Sections 2 and 3.

Section 2 on the other hand is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but not failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wage earners. For recent years separate data are shown for insolvencies by wage earners as distinct from industrial and commercial mortalities. The figures of assets and liabilities are estimates made by the debtor and because they are not made uniformly should be accepted with reservations.

The statistics given in Section 3 are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information and their statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiff's sales, landlord's seizures, etc., when loss to creditors results. On the other hand the statistics do not include assignments of individuals, so that as a rule the totals run lower than those in Section 2. Since between the years 1875 and 1919 this agency was the only source of figures of commercial failures their statistics have an added value because they present a historical series back to 1915 though the basis of classification was changed after 1933 (see text preceding Table 7, p. 955).

Section 1.—Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act 1949 (R.S.C. 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (R.S.C. 1952, c. 111), the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2 therefore do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act and, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

The Bankruptcy Act 1949, under which the Bankruptcy Act 1919 and amendments thereto is repealed, restores to all insolvent persons the right to make a proposal prior to bankruptcy. The summary administration provisions of the Act enable insolvent persons, other than corporations, having limited assets to obtain the benefit of the Act. A new principle has also been established in regard to the discharge of bankrupts and the Act provides that "the making of a receiving order against, or an assignment by, any person except a corporation operates as an application for discharge" unless a waiver is filed in court and served upon the trustee within the prescribed delays.

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy, first appointed in 1932, with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.

* Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

1.—Assets, Liabilities, Assets Realized and Cost of Administration under the Bankruptcy Act by Province 1954

NOTE.—This series began with the year 1951; figures for 1951 are given in the 1954 Year Book, p. 955, and those for 1952 and 1953 in the 1955 edition, p. 1019. The former series of statistics collected on estates closed under the Bankruptcy Act 1919 are given in the 1947 Year Book, p. 846, and the 1952-53 edition, p. 915.

¹ Includes summary administration provisions of the Bankruptcy Act.

² In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately \$5,404,104 in 1953 and \$4,789,413 in 1954.

Summary statistics of estates closed under the Farmers' Creditors Arrangement Act are available in previous editions of the Year Book beginning with the 1947 edition. From the time the Act first came into effect on Sept. 1, 1934 to the end of 1949 there were 885 assignments and 39 receiving orders, or a total of 924 estates closed. No assignments or receiving orders were reported under the Act in 1951 or 1952 but one case was completed during 1952. During the year 1954 two new estates were reported but none of the cases under administration were completed.

Section 2.—Returns under the Bankruptcy and Winding-Up Acts as Compiled by the Dominion Bureau of Statistics

As stated on p. 950, the figures in this Section cover only the bankruptcies and insolvencies under federal legislation—the Bankruptcy Act and the Winding-Up Act—and include assignments of individuals such as wage earners.

Under the Bankruptcy and Winding-Up Acts (R.S.C. 1952, cc. 14 and 296), certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. A statistical series began with 1923 except for the analysis by branches of business which began in 1924. However changes in the administration of bankruptcies introduced by the Bankruptcy Act of 1949 (see p. 951) affected the comparability of the series. In that Act provision was made for proposals from insolvent persons and, since July 1950, agreements made under this method are not included with the statistics of bankruptcies. In Table 2 the number of proposals are shown so as to give a general impression of the trend.

Section 3.—Statistics of Industrial and Commercial Failures from Private Sources

A table showing commercial failures by class for the years 1915 to 1935 (and for Newfoundland for the years 1915-32) is given in the 1936 Year Book, p. 969. In 1936 Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing, and a new class for commercial service. Real estate companies, holding and other financial companies, and agents of various kinds were omitted. These changes had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities were reduced more in proportion to the number of failures, since the companies eliminated usually ran high in indebtedness. This series extends back to 1934.

¹ Newfoundland included from Apr. 1, 1949.

In 1954 Quebec accounted for 59 p.c. of the total failures and 48 p.c. of the liabilities; Ontario had 26 p.c. of the failures and 35 p.c. of the liabilities.

According to Dun and Bradstreet, Incorporated, commercial failures during World War II decreased steadily year by year and failures in the retail trade group, in which the majority of failures took place before the War, also decreased. After the end of the War however the total number of failures increased again. Those in the retail trade group in 1954 accounted for one-half of the total.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during the period 1953-55, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

PART I.—REVIEW OF FOREIGN TRADE*

In 1954 and 1955 world trade recovered from the mild recession that followed the end of the Korean war. The value of trade in 1954 was almost 4 p.c. greater than in the trough year 1953, and a further substantial advance is indicated for 1955. The volume of world trade had actually turned upward in 1953 but, until the general level of prices stabilized in 1954, falling prices more than offset the rise in trade volume.

Widespread readjustments occurred in world economic activity after the boom year 1951 but did not affect all countries equally or simultaneously. First to be affected were the raw material producers, especially those of southeast Asia and Australasia whose principal exports suffered from falling prices and reduced demand. In the latter part of

*Prepared in the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

1952 and the early months of 1953 many exporters of manufactured goods faced restricted markets, especially for textiles but also for some other classes of manufactures. Finally in the latter part of 1953 and the early months of 1954, a mild recession affected the North American economies. However by the latter half of 1954 trade and economic activity were expanding in most countries and this condition continued to prevail in 1955.

The value of Canada's trade in 1954 was exceeded only by that of the United States, the United Kingdom and the Federal Republic of Germany. German trade was slow in reviving after World War II but in 1949 it started to grow rapidly and in 1954 reached almost three times the value recorded for 1949, regaining its normal prewar rank of third world trading nation; it seems certain that this position was retained in 1955.

On a per capita basis, Canada's trade is much greater than that of most other leading trading countries; in 1953 it was greater than that of any other major world trader and in 1954 was exceeded only by the per capita trade of New Zealand. The trade of both Canada and New Zealand is based primarily on the exploitation of plentiful natural resources by a small labour force. For the Netherlands, Belgium, Sweden and the other countries shown in Table 1 with a high level of per capita trade, foreign trade is based on processing imported materials with plentiful capital and labour and on the very intensive use of more limited domestic resources.

² Excludes China, the Union of Soviet Socialist Republics, and the communist countries of eastern Europe (except Yugoslavia).

Canadian Trade 1953-55.—During the second half of 1953 Canadian foreign trade declined sharply and in 1954 it showed only a moderate degree of recovery. In the first quarter of 1955 however the growth of exports and imports again accelerated; in the third quarter both exports and imports exceeded their highest previous seasonally adjusted level, and trade remained at a high level in the fourth quarter. The value of imports in 1955 reached a total of \$4,700,000,000, higher than ever before, and exports at \$4,350,000,000 were almost a record. Both exports and imports were substantially greater in volume than in any previous year.

The decline of exports in 1953 and their continued low level in 1954 was caused almost entirely by developments affecting two types of commodity. Canada's grain exports had been raised to unprecedented heights in 1952 and 1953 because of poor crops in many other countries in the period 1950-52. In the following years, crops in many consuming countries were well above normal and adequate supplies were available in competing exporting countries as well as in Canada. As a result Canada's grain exports declined after the middle of 1953 and somewhat more sharply than did total world grain trade because competition had also returned to normal. Grain exports stabilized during 1954 at a level that was low by 1951-53 standards but close to normal by the standards of other years.

The other major focus of the 1953-54 decline in exports was automotive products. Until 1953 total world production of motor vehicles was well below world effective demand and in 1952, with the Canadian market somewhat restricted by credit controls, Canadian manufacturers sold automotive products to the value of \$111,000,000 in the export market. During 1953 demand for Canadian automobiles in many markets showed some decline and in addition there was a return to more normal market allocations among Canadian and United States plants of certain international manufacturers. By 1954 Canadian exports of automobiles, trucks and parts had fallen to \$27,000,000 but they recovered to \$39,800,000 in 1955.

When the sharp decline in exports of grains and motor vehicles finally ceased, the upward trend of Canadian exports which has characterized most of the postwar period again asserted itself. Most other major exports had either continued to expand in 1953-54 or had showed only moderate declines in 1953 in keeping with the mild recession which affected most overseas countries in that year. Exports of forest products and non-ferrous metals showed especially large advances in 1955 and some of the important postwar developments in Canada began to be reflected in export statistics. New production of iron ore from the Quebec-Labrador pits raised total exports of this commodity to a record \$100,000,000 in 1955, exports of crude petroleum from Canada reached a record \$36,000,000, and new productive capacity helped boost exports of primary and semi-fabricated aluminum to \$210,000,000.

The import recession in 1954 was general rather than concentrated and affected most of the leading commodities normally purchased abroad. Reduced economic activity in Canada was accompanied by a generally lower demand for industrial materials and many finished goods, and the effect of these declines on imports was sometimes accentuated by attempts to reduce inventories. This was especially true of textiles. Poor weather in the first half of the year hampered construction and this, together with the recession, influenced the substantial cut in spending for new industrial machinery and equipment. The drop in grain exports and prices reduced farmers' cash incomes and demand for agricultural implements fell. Personal expenditures on durable consumer goods also declined in 1954, but total personal incomes continued to rise and expenditure on non-durable goods and on services gained substantially, providing a sharp check to the recessive tendencies in the economy.

In 1955 imports increased very rapidly in keeping with the general upswing in the Canadian economy. Especially large increases were shown by automobile parts and fibres and textiles, imports of which had shown above-average declines in 1954. The recovery of investment and construction in Canada led to larger purchases of most capital goods and construction materials, and purchases of consumer goods, both durable and non-durable, continued to rise with consumers' incomes. Almost all of Canada's leading imports shared in the expansion of import trade with the notable exception of coffee, which was depressed by lower prices and market uncertainties, and of anthracite coal, which continued to be reduced by the growing use of oil for home heating. Imports of pipes, tubes and fittings also fell because of a pause in oil and gas pipeline construction.

One noteworthy feature of trade in recent years is the persistent tendency towards an import balance which has prevailed since 1950. Except for the year 1952 when grain exports were particularly high and when an extremely steep drop in import prices caused the value of imports to fall in the face of a rising volume of purchases, an import balance has resulted in each year of the 1951-55 period. The capital goods and consumer goods required to support the program of heavy investment spending and development activity of those years have in large measure had to be imported. On the other hand the new production for export and domestic use, which will be the end result of the investment and development program, has become available more gradually. Import balances have also characterized earlier periods of rapid economic development both in Canada and in other countries.

¹ Pre-1954 peak.

Also noteworthy has been the strength of the Canadian dollar on world markets throughout the period of the import balances. Because a substantial proportion of the investment program in Canada (especially in the field of resource development) has been financed by imported capital, there has been a prevailing demand for Canadian dollars for this purpose which has contributed to the strength of the Canadian dollar since it was freed from exchange controls in October 1950. Since February 1952 the Canadian dollar has remained almost continuously at a premium over the United States dollar, although the amount of this premium was reduced in the later months of 1955.

Changes in the Structure of Trade.—In almost every postwar year, Canada's foreign trade has reached or approached record levels and domestic economic activity has expanded with few interruptions. To find a similar pairing of high domestic prosperity and active foreign trade it is necessary to look back to the latter part of the 1920's. Since that time however the changes in the structure of Canada's trade have been pronounced. During the 1926-29 period more than half of Canada's exports were products of farm origin. Wheat accounted for 28 p.c. of total exports (half of the exports of farm produce), and wheat flour for an additional 5 p.c. No other main sector of industry originated as great an amount of exports as did the wheat farms of western Canada. The economy of the country at that time was directly dependent on international demand for wheat, as became evident in 1929 when demand for wheat began to fail.

In recent years exports of almost every important category of goods have reached higher total values than in any previous period, and in most of them the volume of shipments has also expanded. But the relative changes indicated in Table 4 are marked indeed. Although their absolute value has increased, exports of farm origin accounted for only 28 p.c. of the total in 1951-54, less than either the forest origin or the mineral origin categories. Exports of wheat were 45 p.c. greater in value than in the calendar years 1926-29 and exports of wheat flour were up by almost 69 p.c., but the share of these commodities in Canadian exports fell to 12 p.c. and 3 p.c., respectively. There was no significant difference in the quantity of wheat and flour exported from Canada in 1926-29 and 1951-54 though exports of other farm products taken together showed a small gain in volume.

The growth of Canada's forest and mineral industries to first and second places as sources of exports reflect the great diversification of the Canadian economy since the 1920's. The newsprint industry of North America is today much more highly concentrated in

Canada than it was then, partly because of Canada's wealth of raw materials and hydro-electric power, and partly because the tariffs of the United States and many other countries prevent the development of a large export market for fine papers while permitting the growth of newsprint exports. Wider uses of wood pulp in the textile and chemical industries as well as in the paper industry have led to a very sharp gain in exports of this commodity. Also the international postwar building boom has raised exports of lumber—the original base of Canada's forest industry—to unprecedented heights. However none of these leading forest products rival the position of dominance among Canadian exports that was held by wheat in the 1920's. During 1951-54 newsprint accounted for only 15 p.c. of exports and lumber and wood pulp for 7 p.c. each.

The expansion of exports of mineral origin reflects the discovery of more mineral deposits in Canada—western oil and Quebec-Labrador iron ore are the most spectacular postwar examples—together with a tendency to refine or further manufacture more of these metals before export. In this connection it should be noted that growth in the mixed origin group also reflects the increase of manufacturing activity in Canada. Today a very important part of Canada's mineral exports is actually produced from non-Canadian ores—aluminum, the leading export metal, is entirely produced from non-Canadian ores. Here again the diminished commodity concentration of Canadian exports is evident. Aluminum accounted for only 4 p.c. of exports in 1951-54, and lead, the fifth-ranking metal, for 1 p.c.

A smaller but still significant change is evident within the marine origin group of exports. The development of rapid transport and improved refrigeration has altered the nature of fish exports from chiefly salted, dried or canned in the 1920's, to chiefly fresh and frozen in the 1950's. Thus this important export industry has held its own in a period when the quality of food demanded in most countries was generally rising.

Changes in the industrial origin of imports are considerably less pronounced but still highly significant. As in the case of exports the importance of imports of farm origin has been sharply reduced. Although their absolute value more than doubled from 1926-29 to 1951-54 their share in total imports fell from two-fifths to little more than one-fifth. The sharpest relative gains have come in the manufactured goods categories of the mineral origin and mixed origin groups, reflecting the great importance of capital goods and consumer durables in Canadian expenditure in the postwar period, and also the rise of the chemical industries and the parallel substitution of synthetics for many natural materials.

Other important trends have affected imports of raw materials of mineral origin. The rise of the aluminum industry in Canada during the past twenty years has tended to increase the value of imports in this category. So for a time did the general expansion of industry in Canada and the growing use of automobiles and aircraft requiring increasing amounts of fuels. However new discoveries of oil and gas in Canada in the postwar period and the consequent switch from coal has braked the growth of this category of imports. Though still increasing in absolute value, imports of raw materials of mineral origin have declined from 14 p.c. of total imports in 1946-49 to less than 11 p.c. in 1951-54, a trend that may be expected to continue for some time.

Another development clearly illustrated in Table 4 is the more rapid growth of both exports and imports of partly and fully manufactured goods as compared with trade in raw materials. In the fiscal years 1926-29 raw materials accounted for about 47 p.c. of exports and 25 p.c. of imports, but by the calendar years 1951-54 these ratios had fallen to about 31 p.c. and 21 p.c. respectively. However despite the decline in the proportion of exports shipped in unprocessed form, the basis of Canada's trade still remains in the exchange of plentiful natural resources for the labour and capital embodied in foreign manufactures.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

Quantities and Values.—In all tables of imports and exports the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.—"Canadian produce" exported (domestic exports) includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.—"Foreign produce" exported (re-exports) consists of foreign merchandise that has previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. These countries are not necessarily the countries of actual origin of the goods, since goods produced in one country may be imported by a firm in another country and later re-sold to Canada. In such cases the second country would be the country of consignment to which the goods would be credited.

There is one exception to this rule. An attempt is made to classify by country of actual origin imports produced in Central and South America but consigned to Canada from the United States. The effect of this procedure, which has been in force since 1946, is to reduce slightly imports credited to the United States and to increase those credited to Central and South American countries. (See Table 5.)

Exports are always credited to the country to which they are consigned.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Among the chief factors contributing to these discrepancies are:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. However as gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

NEW GOLD PRODUCTION AVAILABLE FOR EXPORT (NET EXPORTS OF
NON-MONETARY GOLD) BY MONTH 1948-55

¹ Less than \$500.² Southern Rhodesia only.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average *ad valorem* rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries, or in the average *ad valorem* rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Pipes, tubes and fittings (iron and steel).....	2,340	8,411	57,261	58,327	59,680	50,290
Rubber, crude and semi-fabricated.....	12,860	10,013	29,287	26,408	24,267	44,110
Refrigerators and freezers.....	1,189	5,201	43,891	55,530	38,863	43,935
Parcels of small value.....	4,185	14,460	33,691	32,396	40,637	41,639
Synthetic plastics, primary forms.....	2,506	15,386	23,020	32,498	34,893	41,072
Apparel (except hats) of all textiles.....	6,941	12,222	26,091	35,672	33,860	39,039
Vegetables, fresh.....	6,150	25,748	37,969	29,250	33,028	38,852
Cooking and heating apparatus, and parts.....	2,332	10,462	22,444	33,538	31,557	36,324
Gasoline.....	7,998	14,912	39,148	48,650	34,564	35,831
Newspapers, magazines and advertising matter.....	8,436	13,434	28,385	33,446	34,067	34,794
Logs, timber and lumber.....	3,767	6,035	20,798	23,585	23,995	32,773
Wool fabrics.....	10,408	20,115	32,213	41,743	32,367	31,948
Iron ore.....	4,179	6,467	26,519	28,194	20,416	31,563
Automobiles, freight.....	1,949	6,493	11,743	17,304	15,134	30,442
Coal, anthracite.....	21,938	41,987	49,430	40,079	33,144	30,124
Citrus fruits, fresh.....	8,860	34,632	26,712	26,506	31,272	29,903
Tools.....	2,377	10,135	22,566	31,004	23,599	26,739
Books, printed.....	4,238	11,272	18,391	21,378	23,891	26,035
Tea, black.....	9,753	10,202	18,687	19,736	23,581	25,583
Drugs and medicines.....	3,992	9,440	22,111	22,877	25,328	25,018

13.—Leading Domestic Exports 1939, 1946 and 1952-55

NOTE.—Commodities are arranged in order of value in 1955.

Commodity	1939	1946	1952	1953	1954	1955
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Newsprint paper.....	115,687	265,865	591,790	619,033	635,670	665,877
Planks and boards.....	48,829	125,391	295,949	282,736	324,724	385,313
Wheat.....	109,051	250,306	621,292	567,907	375,339	338,216
Wood pulp.....	31,000	114,021	291,863	248,675	271,418	297,304
Nickel, primary and semi-fabricated.....	57,934	55,205	150,982	162,542	182,154	215,169
Aluminum, primary and semi-fabricated.....	25,950	51,390	155,106	173,378	182,392	210,971
Copper, primary and semi-fabricated.....	52,396	34,940	100,806	117,351	127,334	163,924
Iron ore.....	43	4,353	22,333	30,843	39,719	99,814
Asbestos, unmanufactured.....	2,902	23,839	86,510	83,973	82,566	94,804
Barley.....	7,882	9,688	145,684	136,729	89,363	76,461
Wheat flour.....	16,378	126,733	116,055	102,160	88,029	74,442
Farm implements and machinery (except tractors) and parts.....	6,975	28,662	95,692	67,821	70,819	72,206
Zinc, primary and semi-fabricated.....	9,922	27,659	96,283	57,572	58,392	70,558
Whisky.....	7,914	29,650	54,254	63,086	59,156	60,682
Fertilizers, chemical.....	9,179	32,108	42,293	42,633	42,342	56,296
Fish, fresh and frozen.....	10,212	31,110	52,852	51,219	56,650	55,263
Pulpwood.....	10,901	28,731	64,820	45,859	45,766	48,655
Lead, primary and semi-fabricated.....	9,850	16,715	49,676	37,835	40,530	37,194
Petroleum, crude.....	1	—	3,452	6,228	6,318	36,253
Machinery (non-farm) and parts.....	10,873	15,535	47,378	37,282	36,676	35,789
Pigs, ingots, blooms and billets (iron and steel).....	2,691	3,328	25,032	29,508	11,212	33,695
Flax seed (chiefly for crushing).....	1	11	16,038	11,546	13,717	31,279
Plywoods and veneers.....	1,608	12,026	18,655	19,025	21,555	30,104
Shingles.....	8,225	11,211	20,002	20,913	24,182	29,145
Fur skins, undressed.....	14,130	30,928	23,507	21,070	22,997	28,287
Synthetic plastics, primary forms.....	351	1,540	5,860	9,456	19,994	27,365
Abrasives, artificial, crude.....	4,380	11,727	17,701	28,976	27,222	26,942
Tobacco, unmanufactured.....	10,183	5,892	22,221	15,683	18,086	26,547
Platinum metals, unmanufactured.....	6,178	15,450	30,627	26,290	27,640	26,315
Non-commercial items.....	2,402	39,951	18,720	20,295	21,054	25,227
Fish, cured.....	3,884	13,808	25,538	22,271	23,341	23,939
Scrap iron and steel.....	1,021	166	4,187	15,877	15,868	20,936
Electrical apparatus, <i>n.o.p.</i>	3,229	20,939	33,892	37,705	22,913	20,700
Automobile parts (except engines).....	2,992	21,110	18,549	16,999	15,375	20,333
Rolling mill products (iron and steel).....	3,864	7,528	18,844	16,863	5,393	20,313
Molluscs and crustaceans.....	3,542	14,162	17,510	17,588	17,322	20,246
Aircraft and parts (except engines).....	347	9,507	37,503	40,247	28,442	19,906
Silver, unmanufactured.....	8,525	3,490	15,448	16,845	18,953	19,343
Fish, canned.....	10,104	26,618	11,554	16,202	25,820	18,217
Engines, internal combustion, and parts.....	202	1,737	4,260	6,340	16,077	17,391

¹ Less than \$500.

Detailed Imports and Exports.—Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1951-54 are given in Table 14 while corresponding statistics for domestic exports appear in Table 15.

14.—Principal Imports into Canada for Consumption from All Countries,

No.	Item	All Countries			
		1951	1952	1953	1954
I. Agricultural and Vegetable Products					
A. MAINLY FOOD					
	Fruits—				
1	Fruits, fresh..... \$	59,687,372	63,460,360	66,997,129	74,493,229
2	Fruits, dried..... lb. \$	90,770,584	99,007,788	112,161,647	123,216,097
		12,752,567	12,952,208	15,320,398	18,058,213
3	Fruits, canned or preserved..... \$	13,541,824	13,276,921	13,088,744	13,597,322
4	Fruit juices and fruit syrups..... gal. \$	10,686,943	13,811,557	15,244,162	13,990,259
		8,753,428	10,071,300	13,881,768	13,099,921
	Totals, Fruits..... \$	94,735,191	99,760,789	109,288,039	119,249,685
5	Nuts..... \$	22,780,324	21,077,298	20,049,212	22,600,716
	Vegetables—				
6	Vegetables, fresh..... \$	26,295,324	37,968,933	29,250,036	33,027,779
7	Vegetables, dried..... \$	1,598,925	1,353,918	2,756,469	3,413,166
8	Vegetables, canned..... lb. \$	14,558,732	33,546,967	16,881,421	58,517,119
		1,848,116	3,477,283	2,170,766	5,975,589
9	Pickles, sauces and catsups..... gal. \$	1,830,485	3,313,928	3,904,666	1,733,409
		1,647,830	2,960,110	3,484,280	2,107,367
	Totals, Vegetables..... \$	31,390,195	45,760,244	37,661,551	44,523,901
	Grains and Farinaceous Products—				
10	Grains..... \$	40,799,292	32,106,932	28,317,002	40,148,621
11	Milled products..... \$	1,060,661	1,476,553	829,507	794,858
12	Prepared foods and bakery products..... \$	3,911,085	3,849,491	5,413,041	5,711,988
13	Other farinaceous products..... \$	315,013	330,027	506,647	464,250
	Totals, Grains and Farinaceous Products.... \$	46,086,051	37,763,003	35,066,197	47,119,717
14	Oils, vegetable, for food..... \$	4,020,548	2,134,033	2,821,097	2,322,298
15	Sugar and its products..... \$	85,862,388	71,299,307	60,046,405	62,769,616
16	Cocoa and chocolate..... \$	11,733,095	15,022,057	16,406,430	25,135,841
17	Coffee and chicory..... lb. \$	89,765,806	99,739,245	110,106,693	98,722,917
		49,597,626	52,873,922	60,858,498	67,656,952
18	Spices..... lb. \$	5,390,009	4,556,424	5,579,412	6,141,230
		3,755,983	3,095,958	3,564,237	2,771,920
19	Tea..... lb. \$	42,456,287	45,908,126	45,839,662	44,983,719
		21,017,954	18,825,750	19,872,205	23,798,803
20	Other vegetable products mainly food..... \$	2,690,506	2,905,380	3,822,574	4,270,066
	TOTALS, A. MAINLY FOOD..... \$	373,669,861	370,517,741	369,456,445	422,219,515
B. OTHER THAN FOOD					
	Beverages, Alcoholic—				
21	Brewed..... \$	245,634	253,753	274,300	285,780
22	Distilled..... pt. gal. \$	3,098,723	3,995,406	3,867,588	3,367,580
		15,589,620	17,457,092	16,693,085	15,361,454

15.—Principal Exports of Canadian Produce from Canada to All Countries,

No.	Item	All Countries			
		1951	1952	1953	1954
III. Fibres and Textiles					
1	Cotton and manufactures of..... \$	10,960,752	7,041,833	3,374,395	2,220,649
2	Flax, hemp, jute and manufactures of..... \$	1,234,434	1,386,542	564,914	910,488
3	Silk and manufactures of..... \$	763	1,385	6,201	6,355
4	Wool, raw (includes noils and tops)..... lb.	2,326,790	3,170,992	3,436,268	2,708,950
		2,201,134	1,937,985	1,899,138	1,488,774
5	Other wool and manufactures of..... \$	5,295,801	2,525,060	3,870,420	3,720,390
6	Synthetic fibre and manufactures of..... \$	4,267,695	3,227,236	5,210,303	4,311,430
7	Other textile products..... \$	12,897,765	11,576,770	9,407,842	8,310,992
Totals, Fibres and Textiles..... \$		36,858,344	27,696,811	24,333,213	20,969,078
IV. Wood, Wood Products and Paper					
8	Logs..... M ft.	43,063	52,228	47,621	48,346
		4,707,423	4,796,034	4,394,811	3,860,009
9	Railroad ties..... No.	168,478	899,632	1,494,293	882,603
		480,609	3,345,857	4,497,341	3,338,874
10	Planks and boards..... M ft.	3,435,510	3,328,563	3,369,686	3,832,292
		312,198,092	295,948,736	282,736,266	324,724,278
11	Timber, square..... M ft.	3,868	11,095	11,909	15,940
		424,919	1,256,318	1,012,840	1,302,463
12	Shingles..... squares	2,588,360	2,112,826	2,071,338	2,305,537
		27,482,820	20,002,127	20,913,175	24,181,626
13	Pulpwood..... \$	68,102,942	64,819,755	45,859,364	45,765,682
14	Spoolwood..... M ft.	12,017	16,999	8,257	7,138
		1,604,071	2,748,213	1,233,697	1,056,343
15	Wood pulp..... cwt.	44,866,161	38,811,599	39,003,018	43,608,321
		365,132,884	291,863,498	248,674,880	271,418,005
16	Pulp board, wall board and paper board..... cwt.	2,281,317	1,837,327	1,413,368	1,183,063
		14,062,016	11,252,536	7,017,949	6,230,751
17	Book paper..... cwt.	548,769	575,442	568,027	534,776
		5,283,533	5,343,040	4,872,808	4,540,362
18	Newsprint..... cwt.	102,241,224	106,548,605	107,505,019	110,430,601
		536,372,498	591,790,209	619,033,394	635,669,692
19	Wrapping paper..... cwt.	333,011	278,707	223,271	256,599
		3,728,972	3,177,136	1,875,276	2,333,776
20	Newsprint, mutilated, or beater stock, and waste paper..... cwt.	1,423,477	972,320	855,795	809,267
		6,278,987	2,887,880	1,774,980	1,949,553
21	Other wood products and paper..... \$	53,216,365	67,555,704	51,499,079	51,982,962
Totals, Wood, Wood Products and Paper. \$		1,399,076,131	1,366,787,043	1,295,395,860	1,378,354,376
V. Iron and Its Products					
22	Iron ore..... ton	3,225,767	3,846,998	4,819,975	6,126,938
		18,596,137	22,333,472	30,842,991	39,718,740
23	Ferro-alloys..... ton	190,454	159,095	90,010	54,497
		31,347,284	30,379,519	17,206,690	6,648,102
24	Pigs, ingots, blooms and billets..... ton	262,673	432,314	472,427	207,949
		14,433,432	25,031,837	29,507,976	11,212,377
25	Scrap iron or steel..... ton	39,804	87,788	410,009	559,271
		1,615,678	4,187,183	15,877,155	15,868,467
26	Castings and forgings..... cwt.	504,868	483,667	429,689	308,931
		6,291,097	6,173,570	5,899,407	3,831,009

Section 5.—Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade from the angle of degree of manufacture of imports and exports with leading countries are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between geographical areas and countries.

16.—Imports according to Degree of Manufacture by Leading Countries 1953 and 1954

¹ In this classification the expression "Canadian Farm Products" refers to all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

¹ In this classification the expression "Canadian Farm Products" refers to commodities actually produced, in their original state, on Canadian farms. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

Section 6.—Comparison of Value, Price and Volume of Foreign Trade

Since the end of World War II there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade however are the joint product of changes in the volume of goods traded and of the prices at which transactions are conducted. To assess the significance of value changes it is desirable to eliminate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same time-base an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, changes being desirable to simplify the pricing problem. The chief difference is that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous group".

The import totals differ from those usually published by the exclusion of certain goods brought into Canada by the governments of the United Kingdom and NATO countries for the use of their defence forces. Table 22 shows the value of trade adjusted for pricing purposes, and the value, price and volume indexes of Canadian trade for 1952-55.

There has been comparatively little change in export or import prices in the period covered by Table 22 and as a result the year-to-year change shown by the volume indexes closely resembles that shown by the corresponding value indexes. However even in this period the part played by falling prices in accentuating the relatively moderate decline in export volume from 1952 to 1954 stands out clearly. In periods of rapid and widespread price change such as 1950-52, value statistics diverged appreciably from the movements shown by the volume series.

² Excludes imports for the use of the United Kingdom and NATO Governments.

³ Excludes exports of foreign produce.

PART III.—EXTERNAL TRANSACTIONS*

Section 1.—Canadian Balance of International Payments

A summary of Canada's total commercial and financial transactions with other countries is presented in statements of the Canadian Balance of International Payments. The current account statement, showing all current exchanges of goods and services, reveals income and expenditures abroad and the extent to which these are out of balance. The capital account presents an analysis of the movements of capital which have occurred during the periods covered by the current account.

Each year since 1950, with the exception of 1952, Canada's current expenditures abroad have exceeded external current receipts. The resulting current account deficits that have occurred in this period of rapid Canadian development have been financed by inflows of capital. Current account deficits have customarily been associated with periods of Canadian prosperity and once again the rate of recent Canadian growth with the development of new resources has been the underlying element in the strength of Canadian demands for imported goods and services. High levels of investment at a time when defence expenditures have also been very heavy together with rising levels of consumption have contributed to the deficits. Before 1955 the deficits in recent years have not been large in proportion to the high levels of total current transactions and, until then, capital inflows of a long term type were large enough to finance the deficits in most periods. But in 1955 the current deficit rose to a new peak of \$692,000,000 which represented a higher proportion of current receipts than for any year since 1930, and this deficit was substantially more than the net inflow of longterm capital.

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. More detailed information is given in the publications, *Canadian Balance of International Payments* and *Canada's International Investment Position, 1926 to 1954*.

Current Account Transactions.—The current deficit in 1954 of \$432,000,000 was only slightly less than that of \$443,000,000 in 1953, although there was some slowing down in Canadian economic activity late in 1953 and also in 1954. The size of the deficit in 1954 was not greatly reduced as there was some decline in current external receipts and also in expenditures abroad and by the second half of the year upward trends in economic activity had reappeared in North America. The relative stability in the balance was also partly caused by opposite movements in the balances of merchandise trade and of other current transactions. A change from an import balance on merchandise trade to an export balance was partly offset by a larger deficit on non-merchandise account.

The change in 1954 from an import balance to a small export balance in the balance on merchandise trade, when adjusted for use in balance of payments statements, was not as large as occurred in the merchandise account in immediately preceding years. There was however a considerable contraction in the value of both exports and imports. Prominent among influences on Canadian trade in 1954 were the divergent trends in industrial activity in North America and western Europe. Declines occurred in exports to the United States and to overseas countries but the latter decline was concentrated in a few commodities, such as wheat and automobiles, subject to special influences. Other exports overseas were greater, reflecting the high level in economic activity in western Europe particularly. Although there were general declines in Canadian imports in 1954 influenced by the interruption in Canadian expansion, the value was still higher than in any year prior to 1953. The decline in value of imports was probably greater than shown but a change in the procedure of coding imports increased the value of imports in June 1954 by an estimated \$40,000,000. Import prices remained stable in contrast to export prices which fell by 2·7 p.c.

The deficit on non-merchandise account of \$445,000,000 was at a new high level in 1954, accounted for to a great extent by larger deficits on income and travel account. These two items, along with a deficit on all other current transactions, were responsible for most of the current deficit. The large deficit on income account was attributable to larger payments of both interest and dividends to investors abroad at a time when receipts of interest and dividends were lower. The increase in the deficit on travel account resulted mainly from a rise in Canadian travel expenditures in overseas countries. The travel account with the United States showed comparative stability in the face of the recession in business in North America. The deficit on freight and shipping account was less in 1954 than in 1953 but it remained high in comparison with earlier years. The deficit on miscellaneous current transactions was higher mainly because of a larger reduction in receipts than in payments.

Although only a small reduction occurred in the size of the current deficit with all countries, there were larger changes in the bilateral imbalance in Canada's accounts. The current deficit with the United States fell by \$97,000,000 to \$807,000,000 and the surplus with the United Kingdom rose by a slightly larger amount to \$229,000,000. At the same time considerable contractions occurred in the current surplus with the rest of the overseas world.

The reduction in the deficit with the United States was caused by a greater fall in imports than in exports. The reduction in the deficit on commodity account however was partly offset by a considerable increase in the deficit on invisibles arising mainly from a sharp advance in net payments of interest and dividends.

The enlarged surplus with the United Kingdom was still considerably less than in other postwar years except for 1950, 1951 and 1953. The increase in 1954 was the result of changes in both trade and non-merchandise items. In response to strong increases in industrial activity in the United Kingdom, Canadian exports of industrial materials rose and offset the decline in wheat exports. At the same time Canadian imports from the United Kingdom fell, particularly imports of textiles and automobiles. The smaller deficit on invisibles reflects mainly some large non-recurring defence payments for services in 1953.

The surplus with countries included in the Organization for European Economic Co-operation was smaller than in any other postwar year and that with other sterling area countries was about one-half the size of the previous year, while the surplus with the remaining group of other countries almost disappeared in 1954. Exports to each of these groups of countries declined in 1954. A considerable decline in wheat exports was primarily responsible but motor vehicle exports also contributed. Exports of some industrial materials however were higher, particularly to western Europe. In contrast to the decline in exports, imports from these areas were either well maintained or higher. A sharp rise in the deficit on invisibles with western European countries can be traced primarily to increased freight and shipping payments.

Capital Movements.—The longterm capital inflows which have been a prominent feature of Canada's capital account in recent years are closely related to the financing of Canadian development. Many of these inflows are for the direct development of Canadian resources by non-resident firms. Some have taken the form of Canadian borrowing in the United States through the sale of new issues of Canadian securities while others have arisen from international trading in securities and other means. Although in some areas of development capital inflows have been the predominant source of financing, this is not so with all types of new investment in Canada. Consequently foreign capital has been only a minority contributor to the total investment in Canada although a relatively large contributor to some spheres of industrial development.

The outstanding feature of capital movements in 1954 was again the predominance of inflows of a longterm character, and inflows for direct investment were once again the largest group of net inflows. However total inflows for direct investment at \$392,000,000 were less than the \$426,000,000 recorded in the preceding year in contrast to a rising trend up until 1953. Inflows of new capital for direct investment in the petroleum industry continued to rise to a new peak of \$177,000,000 but declines occurred in inflows for direct investment in other mining industries and in manufacturing. United States capital constituted about three-quarters of the net inflow in 1954 but made up a somewhat lower proportion of total direct investment inflow than in recent years. The inflow from the United Kingdom at \$75,000,000 was at a new peak but that from other countries was less than in 1953.

The net inflow of capital for longterm investment through the sale of new issues of Canadian securities abroad amounted to \$128,000,000 in 1954, somewhat less than in 1953. Sales of new issues at \$331,000,000 were only moderately less than in 1953 but retirements at \$203,000,000 were considerably higher. New issues were concentrated in the early months of the year and the volume declined as the margin between interest rates in Canada and the United States narrowed.

For the first time since 1951 trade in outstanding Canadian securities led to a capital inflow in 1954 of \$63,000,000 a result of widely divergent capital movements. Canadians repurchased government bonds mainly from the United States but sold corporation bonds and stock to the United States, United Kingdom and other countries. While the rate of repatriation was considerably higher than in 1953 there was a marked growth in sales to non-residents of securities of Canadian corporations. These included net sales of \$121,000,000 worth of stocks of Canadian companies. Contributing to this development was a change in administrative arrangements in the United States which facilitated the formation of Canadian diversified management investment companies with important tax advantages to United States investors.

Among other capital inflows were repayments of \$72,000,000 on Canada's war and postwar loans to overseas governments, a rise of \$34,000,000 in non-resident holdings of Canadian dollars and a small balance of \$7,000,000 from liquidations of Canadian holdings of outstanding foreign securities.

Outflows of \$33,000,000 for purchases of foreign new issues included a \$25,000,000 Canadian currency issue of the International Bank for Reconstruction and Development. There were also outflows of \$81,000,000 connected with direct investments in Canadian enterprises abroad and an outflow of \$121,000,000 in the capital account with the United States reflecting a rise in official holdings of gold and United States dollars. The remaining group of private short term movements of capital was close to balance in 1954 in sharp contrast with very heavy outflows of private short term capital in the two preceding years. This group covers a great variety of transactions subject to a wide degree of variability.

Section 2.—Travel between Canada and Other Countries

The most significant change in travel between Canada and other countries during 1954 was the increase of nearly 20 p.c. in the number of Canadians visiting overseas countries. Expenditures by Canadians in overseas countries reached an unprecedented high of \$69,000,000 in 1954, an increase of \$11,000,000 or 19 p.c. over the previous year. This increased spending in overseas countries contributed heavily to the aggregate debit balance in travel account with all countries which stood at an alltime high of \$84,000,000.

In contrast the travel account between Canada and the United States remained relatively stable in 1954 with a moderately larger deficit resulting from small changes in receipts and payments. This comparative stability in the face of the recession in business in North America was possible because personal incomes and expenditures on consumption remained high and some types of traffic between the two countries rose in volume.

In 1955 expenditures in Canada by United States visitors reached a new peak but, even so, the debit balance with all countries was greater than in 1954 since Canadian expenditures both overseas and in the United States increased more than non-resident expenditures in Canada.

United States Travel Expenditures in Canada.—Residents of the United States travelling in Canada spent over \$283,000,000 in 1954, about \$1,000,000 more than the previous record in 1953. Those travelling by automobile spent approximately \$7,000,000 less and those travelling by other means of transportation spent nearly \$8,100,000 more than in 1953. Automobiles entering on customs permits form the most important source of revenue from travel in Canada. The expenditures of this group in 1954 declined to a greater extent than the volume; lower averages per car were reported, particularly in July and August when the volume was heaviest. With the exception of the Atlantic Provinces, average expenditures of this group, which contains the most "tourists", were lower in all regions in 1954 than in the previous year.

The northeastern States—Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island and Vermont—accounted for about 45 p.c. of the automobiles travelling in Canada on customs permits, while 32 p.c. came from States in area of the Great Lakes—Illinois, Indiana, Michigan, Ohio and Wisconsin.

Boat traffic accounted for approximately 34 p.c. of the \$8,000,000 increase in expenditures of non-automobile traffic in 1954; increased volume and higher average expenditure per person were reported. Persons travelling by rail spent an additional \$2,300,000 in 1954—an advance to the highest figure since 1949; although the volume was about 4 p.c. lower than in 1953, the averages reported were consistently higher for each quarter of the year. Travellers arriving by aeroplane accounted for \$1,200,000 of the increase in non-automobile expenditures. Averages reported were 6 p.c. lower than for the previous year but the number of visitors entering Canada by this type of transportation was nearly 12 p.c. greater. Expenditures of persons arriving by bus were practically unchanged.

The other group of entries is large in number but is mainly made up of short term local crossings. This group showed an increase in expenditures of \$1,400,000 in 1954 as compared with 1953.

Residents of the United States spent more on travel outside their own country in 1954 than any previous year according to the United States Department of Commerce. For the second year in succession Canada received a smaller portion of United States travel expenditures in other countries than did Europe and the Mediterranean area, with the difference widening considerably. In 1954 European and Mediterranean countries received 37 p.c. of all expenditures on travel in other countries by residents of the United States compared with 33 p.c. in 1953. During 1954 Canada received 30 p.c. compared with 32 p.c. in the previous year and Mexico received 20 p.c. as compared with 21 p.c. in 1953. The West Indies and Central America maintained their share at 9 p.c. of the total and the remaining 5 p.c. was divided between South America and other overseas countries.

Canadian Travel Expenditures in the United States.—Although the number of visits to Canada by residents of the United States in 1954 exceeded visits of Canadians to the United States by over 3,000,000, or approximately 13 p.c., expenditures of Canadians in the United States exceeded expenditures of Americans in Canada by over \$37,000,000, or 13 p.c. Average expenditures by Canadians in foreign countries are normally higher than non-resident expenditures in Canada. In 1954 the average rate per person for visits lasting longer than 48 hours was \$88 for Canadians visiting the United States and \$53 for Americans visiting Canada, compared with \$86 and \$52 respectively in 1953. If the population of the two countries is taken into consideration, residents of Canada spent an average of \$21.06 per capita in the United States during 1954, and residents of the United States spent an average of \$1.76 per capita in Canada.

The increase of \$13,000,000 in expenditures was predominately in the longterm automobile and rail categories which is contrary to the previous year when most of the increase over 1952 was concentrated in the two day automobile class. The increase in purchases declared under the \$100 customs exemption was an important item in the gains experienced in 1953, but this item declined \$6,000,000 in 1954 to a level comparable to the \$66,000,000 figure reported in 1952.

During the latter part of 1954 a study was made on some of the characteristics of Canadian travel to the United States to supplement information otherwise collected.

Although some of the questionnaires reported more than one purpose of visit, final tabulations revealed that 39.4 p.c. reported recreation as the purpose of the trip and 29.9 p.c. reported visits to friends and relatives. Shopping appears to have been merely incidental in the majority of visits. Approximately 21 p.c. reported shopping as the main purpose of the trip and business appeared on 5 p.c. Persons travelling by aeroplane show a higher percentage of business trips than by other types of transportation.

Questionnaires listing more than one purpose of visit were not used in making comparisons on average length of stay and average expenditure per person. The average length of stay varied widely according to purpose of visit. Persons visiting the United States on shopping tours returned to Canada soon after the 48 hour time limit required for customs exemptions. The average length of stay reported by this group was 3.2 days while visits for educational purposes averaged 31 days. In view of the time of year the survey was conducted it is assumed that few university students would be included in the sample reporting education. Persons visiting the United States for miscellaneous purposes stayed an average of two weeks and persons visiting friends and relatives stayed 13 to 14 days.

There was also a wide variation in average expenditures according to purpose of visit. The survey showed that visits for educational purposes had the highest expenditure mainly because of the longer length of stay since the average per person per day was lower than for most other types of visits. Canadians visiting the United States on business had high average expenditures, as a result of higher outlays per day rather than greater length of stay. Persons on shopping tours reported the lowest average expenditure per visit, but the highest average when calculated on a per-person per-day basis. Canadians visiting friends or relatives in the United States have the lowest average expenditure per day of all purposes queried and also low averages per visit.

Travel between Canada and Overseas Countries.—The customary debit balance in travel account between Canada and overseas countries reached an alltime high of \$47,000,000 in 1954, the greatest spread between credits and debits on record. The spread between credits and debits has increased year by year to a point four times greater than the difference recorded in 1949. Expenditures in Canada by non-immigrant arrivals from overseas countries are estimated at \$22,000,000 in 1954, an increase of 10 p.c. over the previous record established in 1953. Included in these totals are transportation costs paid to Canadian carriers.

In 1954, 23,900 non-resident travellers arrived direct from overseas countries at Canadian ports of entry, 12,700 or 53 p.c. of whom travelled by ship and 11,200 or 47 p.c. by air. Compared with 1953 the total figure represents an increase of between 10 and 11 p.c., or approximately 2,300 persons. In addition an estimated 18,000 persons from overseas entered Canada via the United States, making a total of 41,900, an increase of 10 p.c. in the aggregate.

Data on the number of visitors direct from overseas using Canadian carriers as a means of transportation were compiled in 1954; approximately 66 p.c. of the visitors from overseas countries travelled by foreign carrier and 34 p.c. by Canadian air and steamship lines.

Residents of Canada returning via Canadian ports after visits to overseas countries numbered 73,600 in 1954, an increase of 20 p.c. over the previous record established in 1953. Approximately 50 p.c. of the re-entries direct from overseas countries in 1954 returned

through the airports of Gander, Nfld., Dorval, Que., Malton, Ont., and Vancouver, B.C., as compared with 45 p.c. in 1953, and the number so returning increased by about 32 p.c. This is an indication of the increasing popularity of the aeroplane with Canadians as a means of overseas transportation. Return traffic through the other main ports of entry—St. John's, Nfld., Halifax, N.S., Saint John, N.B., and Quebec, Que. (many returning residents cleared at Quebec disembark at Montreal)—is predominantly via ship and amounted to 33,800 persons in 1954 or about 46 p.c. of the total. The number of Canadian travellers returning from overseas countries via the United States in 1954 was estimated at 22,000, making a total of 95,600 returning Canadian travellers, an increase of 15,100 or 19 p.c. over the previous year.

Most of the expenditures by Canadians in overseas countries were in the United Kingdom and continental Europe. Expenditures in the United Kingdom increased 13 p.c. from \$31,000,000 in 1953 to \$35,000,000 in 1954. Expenditures in the countries included in the Organization for European Economic Co-operation showed a gain of \$5,000,000 or 28 p.c. Expenditures in other Commonwealth countries were chiefly in Bermuda and the British West Indies and were \$1,000,000 higher than in the previous year. The remaining expenditures were mainly made in Latin America and amounted to \$4,000,000 in 1954, an increase of \$1,000,000 over 1953.

Tourist Information.—Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, and detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts the tourist may apply to the provincial or municipal bureau of information concerned. (*See Directory of Sources of Official Information in Chapter XXIX under the heading "Tourist Trade".*)

PART IV.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made therefore to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated however that

* Prepared in the several Branches and Divisions concerned and collated in the Information Branch, Department of Trade and Commerce, Ottawa.

two way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore many commodities that are not indigenous to this country have to be imported from abroad. Some of these are required for Canadian industrial processes and others may be classed as consumer goods necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with postwar foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Canadian Trade Commissioner Service.—The Canadian Trade Commissioner Service is one of the important instruments in the continuous effort to increase Canadian international trade, to give worldwide distribution to Canadian products and to locate the best sources of supply for imports. Headquarters are at Ottawa, and 53 offices are maintained in 43 countries, staffed with trained Canadian trade officials and commodity specialists. The work of the Trade Commissioners in the field is co-ordinated in Ottawa by four Area Trade Officers. These Officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Service for the collection, preparation and presentation of information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kind of goods in demand, prices, competitive conditions, trade and exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are forwarded to the Department at Ottawa or directly to interested Canadian firms. For Canadian importers, Trade Commissioners seek sources of supply of a wide variety of goods. The preparation of economic and other reports for departmental use is an important activity for the Trade Commissioner. Assistance is given to Canadian exhibitors at overseas trade fairs and constant liaison is maintained with the trade departments of foreign governments.

In countries where Canada maintains a diplomatic mission as well as a trade office, Trade Commissioners form an integral part of the mission and assume the title of Commercial Counsellor or Commercial Secretary. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls, according to their status as Foreign Service Officers.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning their territories more effectively than is possible by correspondence, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Such direct contacts enable specific problems to be discussed and at the same time serve to bring into focus for the Trade Commissioner the Canadian industrial picture as a whole. He thus returns to his post with a knowledge of current Canadian conditions and in a better position to assist in the development and extension of Canadian trade opportunities.

CANADIAN FOREIGN TRADE OFFICES ABROAD AS AT OCT. 1, 1955

- ARGENTINA.—Commercial Counsellor, Canadian Embassy, Bartolomé Mitre 478, Buenos Aires.
- AUSTRALIA.—Commercial Counsellor for Canada, City Mutual Life Bldg., 60 Hunter Street, Sydney, N.S.W.
Commercial Secretary for Canada and Agricultural Secretary, 83 William Street, Melbourne.
- BELGIAN CONGO.—Canadian Government Trade Commissioner, Forescom Building, Leopoldville. Territory includes Angola and French Equatorial Africa.
- BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.
- BRAZIL.—Commercial Secretary, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro.
Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.
- CEYLON.—High Commissioner for Canada, 6 Gregory's Road, Cinnamon Garden, Colombo.
- CHILE.—Commercial Secretary, Canadian Embassy, 6th Floor, Av. General Bulnes, 129, Santiago.
- COLOMBIA.—Commercial Secretary, Canadian Embassy, Avenida Jimenez No. 7-25, Bogota. Territory includes Ecuador.
- CUBA.—Commercial Secretary, Canadian Embassy, Edificio Motor Centre, Calle Infanta 16, Havana.
- DENMARK.—Commercial Counsellor, Canadian Legation, 4 Trondhjems Plads, Copenhagen. Territory includes Greenland.
- DOMINICAN REPUBLIC.—Commercial Counsellor, Edificio Copello 408, Calle El Conde, Ciudad Trujillo. Territory includes Haiti and Puerto Rico.
- EGYPT.—Commercial Secretary, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Aden, Sudan, Cyprus, Ethiopia and Saudi Arabia.
- FRANCE.—Commercial Counsellor for Canada, 3 rue Scribe, Paris. Territory includes Algeria, French Morocco, French West Africa and Tunisia.
Commercial Secretary for Canada, 3 rue Scribe, Paris.
- GERMANY.—Commercial Counsellor, Canadian Embassy, 22 Zitellmannstrasse, Bonn.
- GREECE.—Commercial Secretary, Canadian Embassy, 31 Vassillissis Sophias Ave., Athens. Territory includes Israel and Turkey.
- GUATEMALA.—Canadian Government Trade Commissioner, 5a Avenida Sud, 10-68, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
- HONG KONG.—Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Building, Hong Kong. Territory includes China, Indo-China, Macao and Taiwan.
- INDIA.—Commercial Counsellor, Office of the High Commissioner for Canada, 4 Aurangzeb Road, New Delhi.
Commercial Secretary for Canada, Gresham Assurance House, Mint Road, Bombay.
- INDONESIA.—Commercial Secretary, Canadian Embassy, Budi Krmulian No. 6, Djakarta.
- IRELAND.—Commercial Counsellor for Canada, 66 Upper O'Connell Street, Dublin.
- ITALY.—Commercial Counsellor, Canadian Embassy, Via Saverio Mercadante 15, Rome. Territory includes Libya, Malta and Yugoslavia.
- JAMAICA.—Canadian Government Trade Commissioner, Canadian Bank of Commerce Chambers, Kingston. Territory includes Bahamas and British Honduras.
- JAPAN.—Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes Korea.
Canadian Government Trade Commissioner, 7th Floor, Crescent Building, 72 Kyomachi, Ikutaku, Kobe.

CANADIAN FOREIGN TRADE OFFICES ABROAD—continued

- LEBANON.—Commercial Secretary, Canadian Legation, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan and Syria.
- MEXICO.—Commercial Counsellor, Canadian Embassy, Edificio Internacional, Paseo de la Reforma, Mexico, D.F.
- NETHERLANDS.—Commercial Secretary, Canadian Embassy, Sophialaan 1-A, The Hague.
- NEW ZEALAND.—Commercial Secretary, Office of the High Commissioner for Canada, Government Life Insurance Building, Wellington. Territory includes Fiji and Western Samoa.
- NORWAY.—Commercial Counsellor, Canadian Legation, Fridtjof Nansens Plass 5, Oslo. Territory includes Iceland.
- PAKISTAN.—Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan and Iran.
- PERU.—Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.
- PHILIPPINES.—Consul General of Canada and Trade Commissioner, Ayala Building, Juan Luna Street, Manila.
- PORTUGAL.—Commercial Counsellor, Canadian Legation, Avenida de Praia da Vitoria 48-1º D, Lisbon. Territory includes the Azores and Madeira.
- SINGAPORE.—Canadian Government Trade Commissioner, Room F-3, Union Building, Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.
- SOUTH AFRICA.—Canadian Government Trade Commissioner, Mutual Building, Harrison Street, Johannesburg. Territory includes Federation of Rhodesia and Nyasaland, Portuguese East Africa, Kenya, Tanganyika, Uganda and Zanzibar.
Canadian Government Trade Commissioner, Grand Parade Centre Building, Adderley Street, Cape Town. Territory includes South-West Africa, Mauritius and Madagascar.
- SPAIN.—Commercial Secretary, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio de Oro, Spanish Morocco and Tangier.
- SWEDEN.—Commercial Counsellor, Canadian Legation, Strandvagen, 7-C, Stockholm. Territory includes Finland.
- SWITZERLAND.—Commercial Secretary, Canadian Embassy, Kirchenfeldstrasse 88, Berne. Territory includes Austria, Czechoslovakia and Hungary.
- TRINIDAD.—Canadian Government Trade Commissioner, Colonial Building, 72 South Quay, Port-of-Spain. Territory includes Barbados, Windward and Leeward Islands, British Guiana, Dutch Guiana, French Guiana, and French West Indies.
- UNITED KINGDOM.—Commercial Counsellor, Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.
Canadian Government Trade Commissioner, 36 Victoria Square, Belfast. Territory includes Northern Ireland.
- UNITED STATES.—Commercial Counsellor, Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington, D.C.
Consul and Senior Trade Commissioner, Canadian Consulate General, 620 Fifth Avenue, New York, N.Y.
Consul and Trade Commissioner, Canadian Consulate General, 532 Little Building, 80 Boylston Street, Boston 16, Mass.
Deputy Consul General (commercial), Canadian Consulate General, Chicago Daily News Building, 400 West Madison Street, Chicago, Ill.
Consul of Canada and Trade Commissioner, Canadian Consulate, 1035 Penobscot Building, Detroit 26, Mich.
Consul General, Canadian Consulate General, Associated Realty Building, 510 West Sixth St., Los Angeles 14, Cal.
Consul and Trade Commissioner, Canadian Consulate, 215-217 International Trade Mart, New Orleans, La.
Consul General, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco, Cal.
Consul General, Canadian Consulate General, The Tower Building, 7th Ave. at Olive Way, Seattle 1, Wash.

CANADIAN FOREIGN TRADE OFFICES ABROAD—concluded

URUGUAY.—Commercial Secretary, Canadian Embassy, Calle Colonia 1013, 7^o Piso, Montevideo. Territory includes Paraguay.

VENEZUELA.—Commercial Counsellor, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Netherlands Antilles.

AGRICULTURAL REPRESENTATIVES

ARGENTINA.—Agricultural Secretary, Canadian Embassy, Bartolomé Mitré 478, Buenos Aires. Territory includes Paraguay and Uruguay.

AUSTRALIA.—Agricultural Secretary for Canada, 83 William Street, Melbourne.

NETHERLANDS.—Agricultural Secretary, Canadian Embassy, Sophialaan 1-A, The Hague. Territory includes Belgium and Luxembourg.

UNITED KINGDOM.—Commercial Secretary (Agricultural), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

UNITED STATES.—Agricultural Counsellor, Canadian Embassy, 1746 Massachusetts Avenue, N.W., Washington, D.C.

VENEZUELA.—Agricultural Secretary, Canadian Embassy, Edificio Pan American, Puente Urapal, Caracas. Territory includes Colombia.

FISHERIES REPRESENTATIVE

ITALY.—Commercial Secretary (Fisheries), Canadian Embassy, Via Saverio Mercadante 15, Rome.

TIMBER REPRESENTATIVE

UNITED KINGDOM.—Commercial Secretary (Timber), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.

Commodities Branch.—The Commodities Branch is responsible for maintaining the liaison with industry and with export and import trades essential to the foreign trade promotion work of the Department. The Branch assembles trade information and data on products for use by Trade Commissioners in posts abroad, and officers of the Branch maintain contact with industry through personal visits and by exchange of correspondence with this purpose in view. Officers of the Branch follow conditions in foreign markets and supply this information for the benefit of Canadian traders.

The Branch contains commodity specialists organized in three Divisions: the Machinery and Metals Division, the Forest Products and Chemicals Division, and the Consumer Goods Division. Within these Divisions individual commodity specialists are concerned with such particular groups of products as machine tools and plant equipment, non-ferrous metals, steel, chemicals, lumber, leather and rubber, as well as a very wide range of consumer products. It is the function of the commodity specialist to call the attention of Trade Commissioners to changes in supply conditions and to products available for export, and to relay market news received from Trade Commissioners to Canadian manufacturers and exporters.

To a large extent the trade promotion work of the Branch begins at the point of finding Canadian products on which to concentrate promotional efforts. When such products are discovered, detailed reports on the products are sent to Trade Commissioners throughout the world to encourage market research and promotion. Close attention is paid to developing opportunities for promoting sales abroad of Canadian products and exporters are informed about regulations governing foreign trade.

Agriculture and Fisheries Branch.—The main functions of this Branch include: (1) trade promotion relating to agricultural and fisheries products; (2) the programming, receiving and distributing of information on foreign agriculture and fisheries; and (3) acting as a focal point for liaison on agricultural and fisheries trade matters with the Department of Agriculture, the Department of Fisheries, the Canadian Wheat Board, and other government departments and boards.

In the field of trade promotion, the Grain Division and the Food and Agriculture Division assist Canadian exporters of agricultural and fisheries products in finding markets in other countries. Canadian firms are supplied with information concerning market conditions and requirements in foreign markets, competition from other sources of supply, exchange and tariff restrictions and other related information. Canadian Trade Commissioners throughout the world are kept fully informed on such matters as production and price trends in Canada, quantities of commodities available for export and sources of supply.

The Grain Division deals specifically with matters relating to Canada's grain trade. Assistance is rendered foreign governments and other buyers in the purchase of Canadian wheat, flour and other cereals. Close contact is maintained with the flour millers as well as daily liaison with the Canadian Wheat Board.

The Commodity Officers concerned with livestock, livestock products, meat, dairy and poultry products, fruits and vegetables, and fish and fisheries products keep in contact with the trade and trade organizations dealing with these commodities. They are in close touch with the officers of other departments of government concerned with the disposition of Canadian production surplus to domestic requirements, and who are responsible for such items as health standards, grading and inspection.

A great deal of information pertaining to foreign agriculture and fisheries is received from the Canadian Trade Commissioners. This material, which reflects foreign government policy, production trends and market information, is processed in the Branch and distributed to the departments of government concerned and others interested. Much of it is published in *Foreign Trade*. The Trade Commissioner Service includes a number of officers who deal specifically with agricultural and fisheries matters. Some of these officers are located in Canada's most important export outlets and others in those countries with which Canada competes on world markets, particularly in such commodities as wheat, coarse grains, livestock, meats and dairy products. The information received from the agricultural officers and other Trade Commissioners on foreign agricultural developments is distributed in Canada through publications issued by the Economics Division of the Department of Agriculture and by direct communication with producers and exporters. Fisheries information from abroad is passed immediately to the Department of Fisheries, the provincial departments concerned, the Fisheries Council, and to fish exporters.

International Trade Relations Branch.—This Branch deals with a wide variety of current trade issues, ranging from the analysis of developments in international commercial relations to assisting in the reopening of dollar markets for Canadian products and to finding practical solutions for tariff and other difficulties encountered by Canadian exporters. The Branch has under constant review Canada's trading relations with other countries, and participates in conferences and negotiations under the General Agreement on Tariffs and Trade. In addition the Branch is concerned with the effects of the work of such international organizations as the Organization for European Economic Co-operation on Canadian and world trade.

Trade treaties are under continuous examination by the Branch, which is responsible for the preparation of material for trade and tariff negotiations with other countries. Material is collected on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitation, marking and labelling requirements, and measures pertaining to quotas, embargoes and other import restrictions. These data are analysed, interpreted, clarified and made available in easily comprehensible form to exporters, government officials and other export interests.

Exporters who encounter difficulties resulting from the trade policies or regulations of other countries are given expert advice and interpretations of foreign regulations. Also the Branch initiates official consultations with other governments respecting such problems.

Economics Branch.—The Economics Branch maintains a continuous review of business conditions in Canada and conducts special studies on particular industries or on any aspect of Canada's economic development as required. Aspects of the general economic situation considered include foreign trade, investment, consumption, production, prices, incomes and employment, as well as conditions in industries and localities.

Industrial Development Branch.—This Branch co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, information is provided on a multiplicity of matters pertaining to industry establishment. The Branch assists also in solving the variety of problems encountered by Canadian and foreign businessmen. It also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Branch acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries and the United States, who wish to establish new industries in Canada. It also works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

Information Branch.—The principal function of the Information Branch is to furnish the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in Canada. Its principal educational and informative medium is *Foreign Trade*, fortnightly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of similar character dispatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Branch is supported by moderate advertising at home and abroad through the daily press, periodicals and trade papers, and by films and radio.

Canadian Government Exhibition Commission.—The Canadian Government Exhibition Commission publicizes Canada by graphic media of all kinds and helps to sell Canadian products abroad. The Commission is solely responsible for the construction and administration of Federal Government exhibits at international expositions, trade fairs and displays outside Canada and of international trade fairs in Canada sponsored by the Government of Canada. The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays, and is equipped to advise individual Canadian companies in the preparation of exhibits. It distributes at its various presentations literature produced by other government departments and agencies.

Export Credits Insurance Corporation.—The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act 1944 (amended in 1946, 1948 and 1954). The Corporation, which is administered by a Board

of Directors including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, insures exporters against losses arising from credit and political risks involved in the export or in an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications—general commodities and capital goods. Coverage for general commodities can be procured by exporters under two types of policies:

(1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or (2) the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for lengthy periods is often necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15 p.c. respectively.

The Corporation, from its inception to Dec. 31, 1954, issued policies covering a total value of \$498,828,879, under which insured export sales were \$272,762,845. Premiums paid totalled \$2,577,078, and gross claims paid to exporters during the same period amounted to \$4,412,654. A large majority of these claims resulted from exchange transfer difficulties with relatively few arising from insolvencies. Recoveries made amounted to \$2,821,088. The excess of premiums over operating expenses and net losses was \$196,294 and this sum, together with interest of \$2,340,050 earned on invested capital, has been added to the underwriting reserve which on Dec. 31, 1954 stood at \$2,529,178.

International Economic and Technical Co-operation Division.—The administration of Canada's participation in the Colombo Plan, a Commonwealth effort to help the peoples of South and Southeast Asia to raise their standards of living and productivity, is the responsibility of this Division. This contribution is of two types—capital aid and technical co-operation. Under capital assistance, grants of goods or services are made to countries in the area on a government-to-government basis. Technical co-operation embraces the training of Asian peoples in a variety of fields in Canada and the supplying of Canadian technical and professional personnel to advise and instruct abroad. The Division also assists the United Nations and its specialized agencies in the recruiting of technical experts and in the arrangement of courses of instruction for trainees sent to Canada for study. For the year ended Mar. 31, 1955, \$26,400,000 was voted by Parliament for Colombo Plan capital aid and technical assistance.

Section 2.—The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given in the 1940 Year Book, pp. 480-482. The 1942 Year Book, pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Limitations of space in the Year Book has made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariffs rates—British Preferential, Most-Favoured-Nation and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped direct to Canada from countries of the Commonwealth and from the British colonies and other dependent overseas territories. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries outside the Commonwealth with which Canada has made trade agreements. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade.

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariff, or under all Tariffs.

Valuation.—Sect. 35 of the Customs Act provides that, when any *ad valorem* duty is imposed, the valuation of the goods for purposes of calculating the duty basically "shall be the fair market value, at the time when and place from which the goods were shipped to Canada, of like goods when sold in like quantities for home consumption in the ordinary course of trade under fully competitive conditions and under comparable conditions of sale" or "the amount for which the goods were sold by the vendor abroad to the purchaser in Canada, exclusive of all charges thereon after their shipment from the place from which they were exported direct to Canada", whichever is the greater. There are further provisions for determining the value for duty when the fair market value, in accordance with the foregoing, cannot be ascertained. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping the goods to Canada, and similar charges however are not included in the value for duty.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than their fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. of the value for duty. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The Tariff Board, constituted by the Tariff Board Act 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

*The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, Ottawa, which is responsible for administering the Canadian Tariff.

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade and the extent to which the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive, with provision for appeal on questions of law to the Exchequer Court of Canada. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Oct. 1, 1955

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia, British West Indies, Ceylon, Ireland, New Zealand, Union of South Africa and the United Kingdom and Colonies. A preferential arrangement is also in force with respect to the Federation of Rhodesia and Nyasaland and preferences are accorded by Canada to India and Pakistan. These agreements and arrangements have been modified and supplemented by the GATT.

Canada exchanges most-favoured-nation treatment with 34 countries under the General Agreement on Tariffs and Trade. The Protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947 and brought the Agreement provisionally into force on Jan. 1, 1948.

The GATT is a multilateral trade Agreement and the concessions negotiated under it apply equally to all signatories. All GATT signatories exchange most-favoured-nation treatment. The Agreement consists of three parts: the general provisions related to the schedules of tariff concessions and the exchange of most-favoured-nation treatment; the provisions relating to commercial policy; and the administrative provisions.

Under the new system of multilateral tariff negotiations initiated under the GATT, four general rounds of negotiations have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; at Torquay, England, in 1950-51; and again at Geneva in 1955. The tariff concessions Canada granted and received at the first Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations were discussed in the 1952-53 edition, pp. 996-997. The existing tariff concessions remain in force until Jan. 1, 1958 and thereafter unless modified in accordance with the terms of the Agreement.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception however the Canada-U.S. Trade Agreement of 1938 is suspended for so long as both countries continue to be contracting parties to GATT.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Oct. 1, 1955**

Country	Agreement	Principal Terms
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITISH WEST INDIES (BARBADOES, BARRADOS, BRITISH HONDURAS, JAMAICA, LEEWARD AND WINDWARD ISLANDS, TRINIDAD AND TOBAGO), BERMUDA AND BRITISH GUIANA.	Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938 was replaced by notice of Dec. 27, 1939 which continued the Agreement. The British West Indies, with the exception of Jamaica, are contracting parties to GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON.....	Ceylon is a party to the Trade Agreement of 1937 between United Kingdom and Canada. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. GATT effective July 8, 1948.	In addition to preferences granted to India, most-favoured-nation treatment is exchanged under GATT.
IRELAND.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada grants British preferential tariff in return for preferential rates where such exist and for most-favoured-nation rates on non-preferential items. May be terminated on six months notice.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice.
PAKISTAN.....	Canada unilaterally accords Pakistan British preferential treatment but without contractual obligation. GATT effective July 30, 1948.	In addition to preferences granted to Pakistan, most-favoured-nation treatment is exchanged under GATT.
FEDERATION OF RHODESIA AND NYASALAND.	Northern Rhodesia and Nyasaland are parties to Agreement of 1937 between Canada and United Kingdom; an Agreement of 1932 between Canada and Southern Rhodesia expired in 1938, but the tariff treatment provided therein continues to be reciprocally accorded. GATT effective in Southern Rhodesia May 19, 1948; extended to whole Federation, Oct. 29, 1954.	Canada exchanges preferential tariffs with Northern and Southern Rhodesia. Canada accords Nyasaland the British preferential rates.
UNION OF SOUTH AFRICA....	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932.	Agreement includes schedules of tariff preferences granted by each country. May be terminated on six months notice.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Oct. 1, 1955—concluded**

Country	Agreement	Principal Terms
UNION OF SOUTH AFRICA— concluded.	Exchange of notes Aug. 2-31, 1935; effective retroactive from July 1, 1935. GATT effective June 14, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an exchange of letters of Nov. 16, 1938, and an exchange of notes Oct. 30, 1947. GATT effective Jan. 1, 1948.	Various concessions by both countries including exchange of preferential tariff rates (some minor reservations by Canada). Extends to Colonies.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Oct. 1, 1955**

Country	Agreement	Principal Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG....	Convention of Commerce with Belgium (including Luxembourg and Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom — Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941 and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946; in effect since Sept. 28, 1946. China withdrew from GATT on May 5, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Oct. 1, 1955—continued**

Country	Agreement	Principal Terms
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment (excluding preferences accorded by Cuba to the United States).
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.
DENMARK (including GREENLAND).	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660 and July 11, 1670 apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one year's notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1950, and definitively Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on six months notice.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT.....	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952.	Exchange of most-favoured-nation rates. May be terminated on six months notice.
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
WESTERN GERMANY.....	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947; effective Aug. 28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
GREENLAND.....	(See Denmark.)	
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Oct. 1, 1955—continued**

Country	Agreement	Principal Terms
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
ICELAND.....	Although there is no contractual obligation, Canada and Iceland adhere to the terms of a treaty originally concluded between Denmark and the United Kingdom on Feb. 13, 1660.	Exchange of most-favoured-nation treatment.
INDONESIA.....	GATT effective Mar. 1, 1948.	Exchange of most-favoured-nation treatment.
IRAN.....	Special arrangement by Order in Council effective Feb. 1, 1951.	Canada grants most-favoured-nation tariff rates as long as Iran accords reciprocal treatment.
IRAQ.....	Special arrangement by Order in Council effective Sept. 15, 1951.	Canada grants and receives most-favoured-nation tariff rates.
ISRAEL.....	Canada-United Kingdom Agreement of 1937 applied under the British Palestine Mandate.	Since the creation of the State of Israel in May 1948 Canada has continued to grant most-favoured nation rates.
ITALY.....	<i>Modus vivendi</i> by exchange of notes of Apr. 23-28, 1948; effective Apr. 28, 1948. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
JAPAN.....	Agreement on Commerce signed Mar. 31, 1954; effective June 7, 1954. GATT effective Sept. 10, 1955.	Exchange of most-favoured-nation treatment. Remains in force for one year from ratification and thereafter unless terminated on three months notice.
LEBANON.....	Special arrangement by Order in Council of Nov. 19, 1946. Lebanon withdrew from GATT Mar. 1, 1951.	Canada grants most-favoured-nation tariff rates as long as Lebanon accords reciprocal treatment.
LIBERIA.....	Special arrangement by Order in Council of June 3, 1955. Liberia withdrew from GATT June 1, 1953.	Canada grants most-favoured-nation tariff rates as long as Liberia accords reciprocal treatment.
LIECHTENSTEIN.....	(See Switzerland.)	
LUXEMBOURG.....	(See Belgium.)	
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947; definitively in force 30 days from that date.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
NETHERLANDS.....	Convention of Commerce of July 11, 1924. Suspended during war; reinstated by exchange of notes Feb. 1 and 5, 1946. Includes Netherlands Antilles and Surinam. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Oct. 1, 1955—continued**

Country	Agreement	Principal Terms
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946; in force provisionally same date. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1826, applied to Canada. GATT effective July 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913 provides means for separate termination by Dominions on one year's notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of United Kingdom—Panama Treaty of Commerce of Sept. 25, 1928. Treaty terminated in 1942.	While contractual obligation has expired Canada and Panama continue to exchange most-favoured-nation treatment.
PARAGUAY.....	Exchange of notes of May 21, 1940; in force June 21, 1940.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
PERU.....	GATT effective Oct. 8, 1951.	Exchange of most-favoured-nation treatment.
PHILIPPINES.....	No agreement at present. United States—Canada Agreement of 1938 (now suspended) applied to Philippines until Philippines attained independence in 1946. Participated in Torquay negotiations but has not yet (Oct. 1, 1955) become a Contracting Party to GATT.	Canada and Philippines continue to exchange most-favoured-nation treatment but without contractual obligation.
POLAND.....	Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment including scheduled reductions. May be terminated on three months notice.
PORTUGAL, PORTUGUESE ADJACENT ISLANDS AND PORTUGUESE OVERSEAS PROVINCES.	Trade Agreement signed May 28, 1954, provisionally in effect July 1, 1954, definitively in force on ratification Apr. 29, 1955.	Exchange of most-favoured-nation treatment. Remains in effect for two years from ratification and thereafter unless terminated on three months notice.
SPAIN AND SPANISH POSSESSIONS.	Since Aug. 1, 1928 Canada has adhered to the United Kingdom—Spain Treaty of Commerce of Oct. 31, 1922. Trade Agreement signed May 26, 1954, provisionally in effect July 1, 1954, definitively in force on ratification June 30, 1955.	Exchange of most-favoured-nation treatment. May be terminated on six months notice. Supplements and amends United Kingdom—Spanish Treaty of Commerce. Remains in effect for three years from ratification, and thereafter unless terminated on three months notice.
SWEDEN.....	United Kingdom—Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. GATT effective May 1, 1950.	Exchange of most-favoured-nation treatment. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one year's notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Oct. 1, 1955—concluded**

Country	Agreement	Principal Terms
SWITZERLAND.....	United Kingdom — Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855 applies to Canada. By exchange of notes Liechtenstein included under terms of this agreement, effective Aug. 2, 1947.	Exchange of most-favoured-nation treatment. Convention of Mar. 30, 1914, provides means for separate termination by the Dominions on one year's notice.
SYRIA.....	Special Arrangement by Order in Council of Nov. 19, 1946. Syria withdrew from GATT Aug. 6, 1951.	Canada grants most - favoured - nation tariff rates as long as Syria accords reciprocal treatment.
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Most-favoured - nation treatment exchanged under 1938 agreement is continued under GATT.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional Protocol signed Oct. 19, 1953, not ratified at Oct. 1, 1955. GATT effective Dec. 16, 1953.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950; renewed each year.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom - Serb - Croat - Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.

CHAPTER XXIII.—PRICES*

CONSPECTUS

	PAGE		PAGE
SECTION 1. INDEX NUMBERS OF WHOLESALE PRICES.....	1033	SECTION 3. INDEX NUMBERS OF SECURITY PRICES.....	1043
SECTION 2. CONSUMER PRICE INDEX	1038		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Index Numbers of Wholesale Prices

Wholesale prices are not restricted in this Chapter to the normal meaning of that word but may be loosely defined as including all prices paid in commercial transactions in goods, except for prices received by retailers for goods sold to consumers. Within this broad group, indexes for numerous sub-classifications are available such as those for component materials, degree of manufacture and special purpose series. Wholesale price indexes, as well as indicating price dispersion between commodities and groups of commodities, are frequently sensitive to changing conditions and have been used to anticipate retail price movements, such as the increase that followed the outbreak of hostilities in Korea in 1950.

The series of wholesale price index numbers related to the base period 1935-39 was introduced in January 1951. Background material concerning the construction of this index is available in DBS Reference Paper No. 24, *Wholesale Price Indexes 1913-1950*. The source of current price information is the DBS monthly publication *Prices and Price Indexes* which includes wholesale prices, retail prices, security prices and exchange rates. Historical data are presented in considerable detail in *Prices and Price Indexes 1949-1952*. The general wholesale price index is available from 1867.

The purpose of wholesale price index number construction is to provide an indicator of changes in the level of prices by comparing the aggregate cost of a bill of goods at one period with the aggregate cost of the same goods at other dates; this is accomplished by expressing the price of a commodity as a relative (the price at a given date or for a given period serving as a base equalling 100) and then combining all commodity relatives together so that each reflects its importance in all transactions. This operation is known as weighting and in the wholesale index the weights for each commodity are the values of quantities marketed (sales—domestic and export, plus imports) in the base period. The movement of the total index is thus determined by the movements of individual commodity price relatives whose effect on the total index is, in turn, determined by their respective weights.

* Revised in the Prices Section, Labour and Prices Division, Dominion Bureau of Statistics.

The principal source of basic price material is industrial firms, the majority of prices being collected by mail. As the objective is to measure pure price change unaffected by such factors as quality change and size of shipment, detailed specifications for price quotes are provided on the mailed schedules. Price movements which result from a changed basis of quotation, such as f.o.b. to c.i.f., are thus eliminated.

General wholesale price indexes have been calculated by most countries for many years but the question "What does a general wholesale price index measure?" cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range; yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities or services, except in so far as prices of these things enter into commodity prices. As a conventional summary figure its use has tended toward a reference level against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials. Thus special wholesale groupings and commodity price relatives are now considered to be of greater importance than the general index itself.

Component indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. Business firms abroad use them in connection with sales and purchases in Canada.

Demands resulting from hostilities in Korea caused sharp advances in wholesale prices in late 1950. The general wholesale index reached 243.7 in July 1951, an alltime peak. The trend reversed in the latter part of the year reflecting declines in animal products and textile products. This downward movement continued until October 1952 and ensuing movements were fractional until the index receded to 219.5 in April 1953. Weakness continued to be felt most strongly in primary and secondary farm products. Lumber prices were also easier, particularly West Coast descriptions, while fibres, textiles and textile products receded slowly.

In general, 1954 was a relatively stable year for wholesale price movements although the general index exhibited a slow decline throughout most of the year, reaching a low of 214.3 in October and registering 215.4 in December. Diverse movements occurred in component groups during 1954: animals and animal products fell about 10 p.c. from a level of 245.0 in June to 221.8 in October caused mainly by the downward price movement of livestock and related meat prices; fibres, textiles and textile products also exhibited a general price decrease but wood, wood products and paper, and non-ferrous metals and their products began a steady increase. Noteworthy were the advances in cedar and fir, zinc and its products and solder and lead and its products.

The year 1955 was the first in which wholesale prices showed any strength since the end of the inflation associated with war in Korea. The steady decline from the July 1951 peak was reversed throughout 1955 as the index moved upward from the October 1954 low point. Between December 1954 and December 1955 the general wholesale index advanced 2.8 p.c.; non-ferrous metals, iron products, and wood products show increases of 17.6, 7.2 and 5.0 p.c. respectively while farm products continued to decline. In general terms, non-farm prices increased on average about 6 p.c. over the year and farm prices declined about 7 p.c.

1.—Annual Index Numbers of Wholesale Price Groups 1946-55 and Monthly Indexes 1954 and 1955

(1935-39=100)

¹ Wheat prices used in this index are Canadian Wheat Board buying prices for Nos. 1, 2 and 3 Manitoba Northern at Fort William-Port Arthur. The initial payment is first used and the index revised as further payments are announced. Between August 1945 and July 1950 the price included for No. 1 Manitoba Northern was \$1.83 per bu. while for subsequent crop years the price per bu. was as follows: 1950-51, \$1.85; 1951-52, \$1.83; 1952-53, \$1.82; 1953-54, \$1.56; and 1954-55, \$1.65, for which year the final payment was announced on May 22, 1956. For the crop year 1955-56 the index is based on an initial payment price of \$1.40 and is subject to revision subsequent to July 1955. Western oats and barley were brought under control of the Canadian Wheat Board Aug. 1, 1949. Since then prices used for Canadian Farm Products have been initial payments to farmers, with participation payments included whenever they are announced.

Index Numbers of Building Materials Prices.—Price movements of materials entering into building construction are currently measured by two special purpose series: price index numbers of residential building materials and price index numbers of non-residential building materials* for which the base years are 1935-39 and 1949 respectively. Details of weighting and construction and historical series may be found in the special bulletins† prepared at the time the indexes were first published. More recently the composite indexes have been calculated on an annual basis back to 1913; current indexes are published monthly in DBS Bulletin *Prices and Price Indexes*.

* Exclusive of engineering structures such as power dams, roads, railroads and bridges.

† *Price Index Numbers of Residential Building Materials 1926 to 1948* and DBS Reference Paper No. 43, *Non-Residential Building Materials Price Index 1935-1952*.

Tables 2 and 3 show annual composite and group indexes from 1950 and monthly from January 1954. The groups in each table from left to right are in descending order of importance in the total index, as indicated by the weight of the group given as a percentage of the total. For comparison purposes the residential building materials price index is also shown converted arithmetically to the base 1949=100.

The advance in the two indexes (1949=100) from December 1954 to December 1955 was 3.1 and 3.8 p.c. respectively for the residential and non-residential series. Within the various components, price increases in the heavily weighted lumber items were largely responsible for the upward movement in residential building materials, whereas the non-residential building materials index reflected the earlier steadiness, followed by later increases in the two most important groups—plumbing, heating and other equipment, and steel and metal work.

2.—Annual Price Index Numbers of Residential Building Materials 1950-55 and Monthly Indexes 1954 and 1955

Section 2.—Consumer Price Index

The consumer price index is Canada's official measure of retail price change. Detailed information on the main aspects of the index is contained in the DBS publication, *The Consumer Price Index, January 1949-August 1952*.

The purpose of the index is to measure changes in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. The families covered by the index lived in 27 Canadian cities of 30,000 population or over, ranged in size from two adults to two adults with four children and had annual incomes ranging from \$1,650 to \$4,050 during the survey year ended Aug. 31, 1948. The budget of the index represents the postwar level of consumption of those families. A list of 224 of the principal goods and services they purchased in the survey year forms the pricing sample and the relative amounts they spent on those and similar categories of items determine the relative importance, or weight, given to each item.

The monthly index number is calculated from a sample of more than 50,000 retail price quotations. Prices are collected by field representatives in 16 cities across Canada and are obtained by mailed questionnaires in 17 other cities. All cities covered, except Charlottetown, had a population of 30,000 or over at the date of the 1951 Census.

Price changes are measured from month to month and applied to the cost of the index budget. The budget is often described as a market basket of goods and services, the physical content of which is kept constant, only changes in retail prices being allowed to influence its cost over time. A comparison between the current cost and the base period cost of the same constant basket yields the index, that is, a measure of the average percentage change in all retail prices from the base period to date. For some of the food items entering into the basket the quantities are allowed to vary as between months but not as between years, in order to take account of seasonal variations in consumption.

Because the index refers to a postwar level of living a postwar year was selected as the reference level of prices and 1949 was considered most suitable because price levels in that year were relatively stable. For the same reason 1949 is used as a reference level for other index number measurements such as those related to industrial production, agriculture, imports and exports.

The percentage distribution of the main group weights as of the base period is as follows: food 31·7; clothing 11·5; shelter 14·8; household operation 17·3; and other commodities and services 24·7.

Consumer Price Index Movements.—The consumer price index (1949=100) rose steadily during 1950 from 100·1 in January to 106·6 in December and continued increasing at an increasing rate throughout 1951 until it reached a postwar peak of 118·2 in January 1952. Four successive monthly declines between brought the index to 115·9 in May 1952 but from that date to December 1955, a period of three and one-half years, the index was remarkably stable, moving between a low of 114·4 and a high of 116·9. This plateau of retail prices occurred during a period of rising wages and salaries with a consequent significant increase in the real purchasing power of wage and salaried earners. During the period 1951 to 1955 an index of average weekly earnings in manufacturing, adjusted for changes in retail prices to indicate change in the purchasing power of such earnings, increased 18·6 p.c.

Though the general average of prices remained practically unchanged from the middle of 1952 to the end of 1955 there were significant variations around this average. Prices of services, led by increasing rents, continued to advance while prices of commodities declined or remained unchanged. The rent component advanced steadily throughout the whole postwar period and between May 1952 and December 1955 moved up 12·1 p.c. Other services increased steadily, rising 7·7 p.c. but foods declined 2·7 p.c. and all commodities other than foods decreased 3·2 p.c. Most of the decline in food and in non-food commodities occurred during 1952, with foods, except for seasonal changes, remaining extremely steady during 1953-55.

Table 6 provides single commodity price relatives on the base 1949=100 for a number of important foods entering into the food component of the consumer price index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

¹ Series "Pork, fresh loins" replaced with "Pork, rib chops" in 1954.

Consumer Price Indexes for Regional Cities.—Table 7 gives regional consumer price indexes for ten cities or city combinations. These indexes are not designed to show whether it costs more or less to live in one city than in another and should not be used for that purpose. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

¹ Explanation of methods used in compiling St. John's, Nfld., index (June 1951=100) is given in DBS Reference Paper No. 28.

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 8 provides retail price indexes for selected countries in 1954 and 1955. These indexes measure price change only within each country and should not be used to compare actual levels of living costs from country to country.

Section 3.—Index Numbers of Security Prices

Price indexes for common stocks are calculated on the 1935-39 base and published weekly and monthly for a sample of issues, broadly classified under the headings: industries, public utilities and banks. Within these categories the sample is further classified by industries for which sub-group indexes are available. Monthly indexes of preferred stocks are also calculated and published.

For purposes of index calculation, Thursday closing prices are used for the issues of companies listed on either or both the Montreal and Toronto stock exchanges. Weights are applied to each issue on the basis of the number of shares currently outstanding. The list of stocks included in the various security series are revised annually so that issues which have become important in stock market activity may be included and those of declining interest removed. Provision is also made for stock splits, mergers and the exercise of 'rights'. The indexes are designed to reflect weekly and monthly changes of interest to the investor, rather than day-to-day changes of more speculative interest. For that reason the historical record of indexes dating back to January 1914 on a monthly basis* is of significance in any analysis of the degree of fluctuation in stock prices through time.

Investors Index.—Common stock prices recorded a generally upward trend during 1954 and 1955. The investors index stood at 247.6 in December 1955, 61.2 p.c. above the December 1953 figure of 153.6 and 25.3 p.c. above the 25 year peak of 197.8 established in September 1929. During 1955 prices moved up 19.7 p.c. led by strength in industrial mines, machinery and equipment, food and allied products, pulp and paper and milling issues. While all groups shared in the 1955 advance, participation of two—textiles and clothing, and oils—was negligible.

* Available on request from Prices Section, Labour and Prices Division, Dominion Bureau of Statistics.

Mining Stocks.—Mining stocks paralleled the movement of industrials and utilities during 1954 and 1955. The composite index moved up 61.6 p.c. from the end of December 1953 to a high of 129.1 in August 1955 and then declined slightly to 121.4 at the end of the year. During 1955 quotations moved up 20.3 p.c. reflecting an increase of 31.5 p.c. in base metals and 7.4 p.c. in golds.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in this Section. Additional information is provided for each level of government in Sections 2, 3 and 4.

Combined Revenue and Expenditure.—Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by sources and net combined current and capital expenditure by services, respectively, for 1952 and 1953. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, certain other sales of commodities and services, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-governmental transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-governmental transfers in the two tables.

Tables 3 and 4 show combined revenue of all governments and combined expenditure of all governments, respectively, for the years 1950-53, both exclusive of inter-governmental transfers.

* Except as otherwise noted, this Chapter has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

1.—Combined Revenue of All Governments 1952 and 1953

Section 2.—Federal Public Finance

A sketch of public finance from the French régime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. Budgets for the years ended Mar. 31, 1946-55 will be found in issues of the Year Book beginning with the 1946 edition. The most important postwar Budget changes, up to and including the 1952-53 Budget, are summarized in the 1952-53 Year Book, pp. 1026-1030. The postwar financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064.

The 1955-56 Budget.—The Budget for 1955-56 was presented to Parliament by the Minister of Finance on Apr. 5, 1955. A number of tax changes were proposed, the more important of which are outlined briefly as follows:—

A reduction was made in the rates of personal income tax; each of the rates in the graduated rate schedule was lowered by two percentage points. This meant a reduction in tax ranging from 13.3 p.c. for lower income taxpayers to 2.8 p.c. for those with large incomes. The reduction became effective on July 1, 1955 so that for the calendar year 1955 the amount of the reduction was only one-half the percentages referred to above.

The rate of tax on taxable income of corporations in excess of \$20,000 was reduced from 47 p.c. to 45 p.c. and the reduction applied to income earned after Jan. 1, 1955.

The law was amended to provide that future rentals from real property would be taxed as income from carrying on a business rather than as income from investments. Also future expenses of printing, professional fees and other costs incurred by a business incidental to borrowing money or issuing shares would be deductible as a business expense.

The right of investment companies to elect to be taxable or exempt was withdrawn and all investment companies are required to pay a tax of 20 p.c. on their taxable income. The rules under which a corporation can qualify as a "non-resident owned investment corporation" or a "foreign business corporation" were made more restrictive.

In the field of commodity taxes the special excise tax on passenger automobiles was reduced from 15 p.c. to 10 p.c. and the 10 p.c. special excise tax on tires and tubes was repealed.

A number of items were added to the schedule of articles exempt from the general sales tax including materials to be used in the manufacture or production of feeds for poultry, livestock or fur-bearing animals; creosote oil and other wood preservatives for use in the treatment of timber, poles and lumber; materials to be used in the production of terrazzo flooring; perforated fibre drainage pipe four inches or under in diameter; rims for kitchen sinks; floor tile and wall paper.

The Budget resolutions contained proposals regarding approximately 80 tariff items. A number of these were amendments to remove uncertainties and administrative difficulties but there were also tariff reductions affecting a wide range of items including chemicals used in animal foodstuffs, poultry processing equipment, fishing vessels, processing equipment used by the fishing industry, dentists' chairs, aircraft parts, and articles and materials used in the training of mentally retarded children. After considering a report of the Tariff Board, a duty of 7½ p.c. was imposed on polyethylene resins and on phenol-aldehyde resins. Also on the recommendation of the Tariff Board, a common duty of 10 p.c. was placed on ethylene glycol used in making anti-freeze and the duty on finished anti-freeze was reduced from 20 p.c. to 15 p.c.

No change was made in old age security taxes. It was announced that the deficit of \$46,000,000 incurred in the Old Age Security Fund during the year ended Mar. 31, 1954 and carried as a temporary loan would be charged to 1954-55 expenditures and that the deficit incurred in 1954-55 estimated at \$62,000,000 would be charged to 1955-56 expenditures.

All the tax changes announced were estimated to result in a loss of revenue of about \$207,000,000 in a full year and \$148,000,000 in the year ended Mar. 31, 1956.

Subsection 1.—Balance Sheets of the Federal Government

Table 7 shows the balance sheets of the Federal Government as at Mar. 31, 1954 and 1955. The figures of this table are on a basis not strictly comparable to those in previous Year Books.

Subsection 2.—Revenue and Expenditure

In the fiscal year ended Mar. 31, 1955 Federal Government revenue amounted to \$4,124,000,000 compared with \$4,396,000,000 in the previous year, a decrease of \$272,000,000. During the same period expenditure decreased by \$76,000,000 from \$4,351,000,000 to \$4,275,000,000. The excess of expenditure over revenue for the fiscal year was \$152,000,000.

Tax revenue was \$230,000,000 less than the previous fiscal year and non-tax revenue increased \$3,000,000. Special receipts and other credits decreased by \$46,000,000.

¹ Pensions under the Old Age Security Act 1951 (effective January 1952) are paid out of the Old Age Security Fund account and are not recorded under departmental expenditure. See pp. 279-281. ² Department of Resources and Development in 1953. ³ Under Department of Resources and Development in 1953 when expenditure amounted to \$13,952,545.

Subsection 3.—Analysis of Revenue from Taxation

Table 10 gives a comparison of total expenditure with taxation revenue and total revenue for each of the fiscal years ended Mar. 31 since 1951. During the war years expenditure far exceeded revenue but in 1947 taxation met over 92 p.c. of expenditure and revenue from all sources exceeded expenditure. For 1948 and 1949 revenue from taxation alone exceeded total expenditure by a substantial amount owing to the maintenance of high taxation levels and a greatly increased national income. Since that time the percentage of taxation revenue to total expenditure has gradually decreased.

10.—Relationship of Total Expenditure to Taxation Revenue and to Total Revenue, Years Ended Mar. 31, 1951-55

NOTE.—Figures for 1940-46 are given in the 1951 Year Book, p. 989 and for 1947-50 in the 1954 edition, p. 1071.

Year	Total Expenditure	Taxation Revenue	Total Revenue	Percentage to Total Expenditure of—	
				Taxation Revenue	All Revenue
	\$	\$	\$	p.c.	p.c.
1951.....	2,901,241,693	2,785,349,899	3,112,535,948	96.01	107.28
1952.....	3,732,875,250	3,657,775,082	3,980,908,652	97.99	106.64
1953.....	4,337,275,512	3,997,592,937	4,360,822,789	92.17	100.54
1954.....	4,350,522,378	4,003,584,453	4,396,319,533	92.03	101.05
1955.....	4,275,362,888	3,773,438,080	4,123,513,300	88.26	96.48

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax and succession duties; customs receipts constitute a single item in the *Public Accounts* and are not further analysed here.

Excise Duties

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a byproduct of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise tax.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as at Dec. 15, 1955:—

Spirits.....	per proof gal.	\$12-00	Canadian brandy.....	per proof gal.	\$10-00
Spirits used by licensed bonded manufacturers.....	per proof gal.	1-50	Malt, all, when brought into a brewery.....	per lb.	Free
Spirits used in bond for manufacture of perfume.....	per proof gal.	Free	Beer, all.....	per Imp. gal.	0-38
Spirits used in bond for manufacture of approved chemical compositions.....	per proof gal.	0-15	Tobacco, manufactured, all descriptions except cigarettes.....	per lb.	0-35
Spirits sold to druggists licensed under the Excise Act to be used exclusively in preparation of prescriptions for medicines and pharmaceutical preparations.....	per proof gal.	1-50	Cigarettes, weighing not more than two and one-half pounds.....	per M	4-00
Spirits distilled from wine produced from native fruits, and used in any bonded manufactory for the treatment of domestic wine.....	per proof gal.	Free	Cigarettes, weighing more than two and one-half pounds.....	per M	5-00
Spirits imported and taken into a bonded manufactory (in addition to duties otherwise imposed)....	per proof gal.	0-30	Cigars, all.....	per M	1-00
Spirits used directly in the manufacture of toilet preparations or cosmetics on which excise tax is applicable under Schedule I of the Excise Tax Act.....	per proof gal.	Free	Raw leaf tobacco, imported, now dutiable under the customs tariff only.		
			Canadian raw leaf tobacco, when sold for consumption.....	per lb.	0-20

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, bona fide public hospitals, or health institutions in receipt of federal and provincial government aid.

11.—Gross Excise Duties Collected, Years Ended Mar. 31, 1951-55

Item	1951	1952	1953	1954	1955
	\$	\$	\$	\$	\$
Spirits.....	60,126,300	45,944,724	48,627,965	69,194,020	72,185,407
Validation fee.....	1,108,252	1,223,933	746,877	—	—
Beer or malt liquor.....	2,745,851	3,812,065	5,294,283	4,799,823	72,676,281
Malt.....	65,409,427	73,748,003	80,584,283	78,733,288	1,151,032 ¹
Tobacco and cigarettes.....	114,282,662	100,547,951	116,701,207	96,724,855	100,511,808
Cigars.....	203,945	162,968	212,817	245,862	241,177
Licences.....	38,009	36,092	38,183	36,519	36,826
Totals².....	243,914,446	225,475,736	252,205,615	249,734,366	246,802,531

¹ Tax on malt replaced by gallonage tax on beer.

² These totals do not agree with net excise duties as shown in Table 8 owing to refunds and drawbacks and, for spirits, a transfer tax which is included here.

Statistics of Licences and Distillation.—As a result of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.

12.—Statistics of Licences and Distillation, Years Ended Mar. 31, 1951-55

Sulphide liquor.....gal.	86,454,960	99,344,940	98,380,740	394,040,231	370,916,068
Proof spirits manufactured..proof gal.	23,551,259	24,742,386	22,517,166	24,710,625	27,330,433

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of 2,356,329 proof gal. in that year to a high of 35,555,059 proof gal. recorded in 1945.

Alcohol and Tobacco Taken Out of Bond.—The amounts of beverage spirits, malt beer, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in Table 35, p. 938.

Excise Taxes Collected

The statistics given in Table 13 represent gross excise tax collection by the Excise Division of the Department of National Revenue.

13.—Excise Taxes Collected by Commodity and Province, Years Ended Mar. 31, 1951-55

¹ Total includes tax on television sets and tubes of \$11,340,860 in 1954 and \$16,668,388 in 1955.
² Includes refunds and drawbacks.

³ Includes 2 p.c. sales tax.

Income Tax

Income Tax Collections by the Department of National Revenue on a Fiscal Year Basis.—Statistics of income tax collections are gathered at the time the payments are made and are therefore up-to-date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. As a result most of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year, and cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

14.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1947-55

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000, for 1935-46 in the 1951 edition, p. 994.

Corporation Income Tax Statistics.—Corporation statistics presented in Tables 17 and 18 are on a taxation year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these two Provinces.

Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces in the following years: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905. The Federal Government first imposed succession duties in 1941. Current legislation is the Dominion Succession Duty Act (R.S.C. 1952, c. 89).

In 1947 seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia—withdrew from the succession duty field. The seven provinces entered into agreements with the Federal Government to 'rent out' the succession duty field for the period Apr. 1, 1947 to Mar. 31, 1952. Accordingly in these provinces the previous combination of federal and provincial succession duties was replaced by a single federal succession duty at double the previous federal level which, for most provinces, resulted in a combined duty approximately the same as previously levied under the separate federal and provincial duties. The Provinces of Quebec and Ontario did not enter into the agreements but the doubled rates of federal duty were applied and are capable of being reduced up to one-half by a credit for the duty paid to these Provinces. Yukon Territory in 1948 and the Province of Newfoundland in 1949 entered into a similar tax rental agreement.

In 1952 the tax rental agreements expired but new five year agreements were negotiated with the same eight provinces which again elected not to tax in the succession duty field. The Province of Ontario also entered into an agreement on income tax but elected to continue to tax in the succession duty field. Consequently in all the provinces of Canada the situation in regard to succession duty is likely to be the same as that described above until Mar. 31, 1957.

Double taxation of estates resulting from taxation of the same property by more than one Canadian jurisdiction has been common in the past but with the withdrawal of eight of the provinces from the field and an interprovincial agreement between Ontario and Quebec, the credit provision of the federal legislation has reduced this problem considerably. In the international field dual taxation has been dealt with by way of tax conventions. A tax convention between Canada and the United States was signed on June 8, 1944 and amended effective Nov. 21, 1951. An agreement respecting succession duties was signed June 5, 1946 between Canada and the United Kingdom. A convention between Canada and France, signed on Mar. 16, 1951, came into effect on July 2, 1953.

Table 19 shows the receipts of the various governments from succession duties for 1953-56.

¹ Under terms of the 1952 Dominion-Provincial Taxation Agreements all provinces except Ontario and Quebec refrain from levying succession duties; amounts shown in other provinces are arrears. Provincial figures for 1955 are preliminary; figures for 1956 are estimates only.

Federal Duty.—Beneficiaries are divided into four classes as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No federal duty is payable on estates not exceeding \$50,000 or on bequests of up to \$1,000 to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by allied nations for war services, nor on insurance moneys or annuities if the person with whom the contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties for those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to \$20,000, dependent children to \$5,000 each and, where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. For dependent orphaned children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime of the deceased are exempt if the transfer was carried out more than three years prior to his death and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

The difficulties of working out succession duty tables to show the combined effects of federal and provincial duties are readily realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give examples of the combined duties applicable to them. This has been attempted in Tables 20, 21 and 22.

Examples of the rates of duty and duty levied are given in Table 20.

	1,000,000	1,000,000	44·7	447,000

Occurrence of Combined Federal and Provincial Succession Duties.—Only the Provinces of Quebec and Ontario have retained their own succession duties. In Tables 21 and 22, for all classes of beneficiaries, the duties collectable are shown where an estate of given value is left to one beneficiary only. It would be impossible to cover the many different combinations of the various beneficiaries and the exemptions and saving clauses to be found in the legislation of the respective provinces. Each estate is moreover assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir.

Quebec.—The current legislation under which succession duties are collected is R.S.Q. 1941, c. 18, as amended. As stated above, the following text and table can give only a broad outline of such duties as are applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec, Que.

Under the legislation beneficiaries are divided into three classes as follows:—

- (1) Those in direct ascending or descending line, or of a relationship as between consorts, between father- or mother-in-law and son- or daughter-in-law, or between step-father or step-mother and step-son or step-daughter. There is no limitation of degree in the direct ascending or descending line in these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased (nephews and nieces); or a brother or sister (uncle or aunt) or son or daughter of a brother or sister of the father or mother of the deceased (first degree cousins).
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000; in an estate, the aggregate value of which does not exceed \$50,000, this sum is increased by \$1,500 for each child, in the first degree, under 25 years of age, domiciled in the Province, left by and surviving the deceased (15-16 Geo. VI, c. 14). If the aggregate value of the estate is less than \$1,000, bequests to collateral relatives are exempt. No duty is payable on bequests of up to \$1,000 to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. In estates that devolved prior to Mar. 10, 1949 no duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws. Since Mar. 10, 1949 (13 Geo. VI, c. 32), all legacies, gifts and subscriptions for religious, charitable and educational purposes are tax-free, regardless of the country, province or State where the institutions benefiting therefrom are located.

¹ The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer of up to one-half of this amount on account of duty paid to the Province; see p. 1064. ² After deduction of credit on federal duty.

Ontario.—The current legislation on succession duties is R.S.O. 1950, c. 378, as amended. Full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto, Ont.

Beneficiaries are divided into three classes as follows:—

- (1) Wife; child; husband; parent; grandparent; son- or daughter-in-law. The word "child" includes all lineal descendants.
- (2) Lineal ancestor beyond grandparent; brother; sister; uncle; aunt; also descendants of such brother, sister, uncle and aunt.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$50,000 willed to persons in Class (1), nor on those not exceeding \$10,000 willed to persons in Class (2).

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits, though exempt, are nevertheless taken as a factor in fixing the rates applicable to the dutiable portions of the estate.

Bequests for religious or educational purposes to any religious or educational organization which carries on its work solely in Canada, and bequests for charitable purposes to any charitable organization which carries on its work solely in Ontario, are exempt from duty and are ignored altogether in the computation of duty on the portions of the estate that are not exempt. The same rule applies to bequests to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

There are other exemptions more specifically set out in Sects. 3 and 4 of the Ontario Act.

Subsection 4.—Subsidies and Taxation Agreements with the Provinces

Subsidies.—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the Provinces.

Interest on Debt Allowance.—By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except to Ontario and Quebec, interest at 5 p.c. per annum on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the

subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time adjustments have been made in the basis of calculating the debt allowances of provinces; moreover the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted.

Allowances for Governments and Legislatures.—Under the terms of the union annual specific grants were made to the various provinces toward the support of their governments and legislatures. These amounts vary with the population of the provinces according to the following scale approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, “ “ 400,000.....	180,000
400,000, “ “ 800,000.....	190,000
800,000, “ “ 1,500,000.....	220,000
Over 1,500,000.....	240,000

Allowances per Capita of Population.—Under the British North America Act of 1867 a grant of 80 cents per capita of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per capita up to a population of 2,500,000 and at the rate of 60 cents per capita for so much of the population as exceeded that number. These allowances were last adjusted in 1951 following the decennial Census.

The Act to approve the Terms of Union of Newfoundland with Canada in 1949 provided for an annual subsidy equal to 80 cents per capita of the population of the Province (being taken at 325,000 until the first decennial Census after the date of union), subject to increase to conform with the scale of grants authorized by the British North America Act 1907.

Special Grants.—For certain of the provinces grants have been added to the original scale of subsidies because of special circumstances.

PRINCE EDWARD ISLAND.—Various special grants totalling \$155,880 per annum.

NEW BRUNSWICK.—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the British North America Act of 1867.

MANITOBA.—A special grant on the basis of population amounting at present to \$562,500 per annum.

SASKATCHEWAN AND ALBERTA.—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$750,000 for Alberta.

BRITISH COLUMBIA.—A special grant in lieu of lands amounting at present to \$100,000 per annum.

Additional Special Grants.—Additional special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia until 1941; they were suspended when the Wartime Tax Agreements 1942 came into force. The grants were paid in 1947 and later years to the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act 1942. The Terms of Union with Newfoundland 1949 provide for an additional annual subsidy of \$1,100,000 in recognition of the special problems of its geography and its sparse and scattered population.

23.—Subsidy Allowances to Provincial Governments, Years Ended Mar. 31, 1949-55

NOTE.—Exclusive of additional payments under the Wartime Tax Agreements and the Tax Rental Agreements.

Taxation Agreements.—Early in World War II, in order to provide revenue for heavy national expenditures and at the same time control inflationary tendencies, the Provincial Governments vacated the income and corporation tax fields in favour of the Federal Government for the duration of the War and a limited period thereafter, after

agreeing to the terms of a tax rental fee from the Federal Government. These Agreements of 1942 were succeeded by Tax Rental Agreements 1952. Under the 1952 Agreements, all provinces except Ontario and Quebec agreed to lease their personal and corporation income taxes, special corporation taxes and succession duties to the Government of Canada in exchange for a rental fee. Ontario, which had not entered into the 1947 Agreements, also agreed to lease personal and corporation income taxes and special corporation taxes but retained the right to levy succession duties. In 1952 the nine provinces received \$303,000,000 in tax rental fees compared with \$96,000,000 received by the eight provinces in 1951.

The Wartime Tax Agreements of 1942 are outlined in the 1946 Year Book, pp. 900-901. The 1947 and 1952 Tax Rental Agreements are outlined at pp. 1087-1090 of the 1954 edition.

Subsection 5.—National Debt

A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The following tables summarize the debt position during the period 1946-55 as to interest, currency of payment, outstanding debt and securities issue.

25.—Summary of the Public Debt and Interest Payments Thereon, Years Ended Mar. 31, 1946-55

NOTE.—Statistics for 1867-1913 are given in the 1942 Year Book, p. 775; those for 1914-35 in the 1947 edition, p. 972; and those for 1936-45 in the 1951 edition, p. 1009.

¹ Based on the official estimates of population for June 1 of the year indicated (see p. 151).

² Based on the official estimates of population for June 1 of the year immediately preceding the one indicated (see p. 151).

³ The apparent increase in interest paid results from the accrued interest on refundable taxes having been charged in the year of repayment.

⁴ Excludes \$87,510,068 adjustment required to place interest on public debt on accrued basis.

⁵ These figures are not strictly comparable with those for previous years chiefly because of changed methods in accounting for cash.

Funded Debt Operations.—The unmatured debt and treasury bills outstanding as at Mar. 31, 1955 are listed in Table 26 and information on the Federal Government securities (payable in Canada) issued during the year ended Mar. 31, 1955 is given in Table 27.

Guaranteed Debt.—In addition to the direct debt of the Federal Government already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities by the Federal Government of the railway lines that now form the Canadian National Railways and the subsequent extensions thereof. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts, the National Housing Act, the Farm Improvement Loans Act and the Veterans Business and Professional Loans Act. When the Bank of Canada commenced business on Mar. 11, 1935 the guarantee of the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities and/or if the Bank suspends payment of any of its liabilities".

28.—Guaranteed Debt of the Government of Canada (Amounts Held by the Public as at Mar. 31, 1954)

NOTE.—These contingent liabilities are expressed in Canadian dollars; stocks and bonds payable solely in Sterling are converted on the basis of £1=\$2.80 and United States dollars are considered at par with the Canadian dollar.

Loans made by chartered banks to Canadian Wheat Board.....	150,000,000	94,409,740

¹ This amount represents the original maximum amount guaranteed. As the authority for making additional guaranteed loans or advances had expired prior to Mar. 31, 1955 the amount authorized at that date is the same as the amount outstanding.

Section 3.—Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the Public Accounts figures are required in order to produce comparable statistics. For example transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

Fiscal periods are as nearly coincident as possible in view of the variations in provincial fiscal year-ends prior to the 1951 fiscal year; as of 1952 fiscal years of all provinces end on Mar. 31. Figures for Newfoundland are included from 1949 and for Yukon Territory from 1950.

Subsection 1.—Revenue and Expenditure of Provincial Governments

The figures of revenue and expenditure presented in this Subsection do not agree with those given in Tables 1 and 2, pp. 1047-1048, mainly because of differences in the methods used to compute net figures and because of the slightly different classification of items. Net general revenue as shown in Tables 29 and 30 is achieved by deducting from gross general (ordinary and capital) revenue (a) all institutional revenue, (b) revenue in the form of interest, premium, discount and exchange, (c) grants-in-aid and shared-cost contributions and (d) all capital revenue. These revenues are then offset against the related functions of expenditure to arrive at net general (ordinary and capital) expenditure, shown in Tables 29 and 31.

The following statement gives some indication of the increase in the revenue collected and services rendered in 1953 by the provincial governments compared with 1949, the year that Newfoundland entered Confederation.

Subsection 2.—Debt of Provincial Governments

Table 32 reveals a steady increase in total bonded debt despite the decreases registered in Alberta and British Columbia in the later years. Table 33 shows that the majority of bond issues are payable in Canada only (70 p.c. in 1949 decreasing to 63 p.c. in 1953) and that the portion payable in New York only has increased from zero in 1949 to 18.5 p.c. in 1953. Table 34 provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1954.

32.—Gross Bonded Debt (exclusive of Treasury Bills) of Provincial Governments as at Fiscal Year Ends Nearest Dec. 31, 1949-51 and Mar. 31, 1952-53

⁴ Having a term of less than two years.
⁵ Includes \$59,122,000 net liability of the province re Province of Ontario Savings Office.
⁶ Based on estimated population as at June 1, 1954, see p. 151.
⁷ Deposits in the Newfoundland Savings Bank.
⁸ Based on estimated population as at June 1, 1954.

Section 4.—Municipal Finance

Subsection 1.—Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation based on assessed valuations of real and other types of property. In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba and Alberta, municipalities assess and tax personal property. In Alberta municipal districts the valuations of personal property assessed have risen sharply with the growth of the oil industry. In Manitoba the personal property tax is used generally by all classes of municipalities except cities. Aside from property the most important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuation. A variation in methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Three provinces have other miscellaneous types of assessment, the general forms of which are given in the footnotes to Table 35.

The figures in Table 35 are not entirely comparable on an interprovincial basis from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws which are not all similar either in application or in effect. For instance in British Columbia improvements cannot be taxed on a value in excess of 75 p.c. of taxable values; the values actually taxed in 1953 ranged from nil to 75 p.c.; for all municipalities the total improvements actually taxed represented 53.5 p.c. of total taxable values. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be caused by the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. However there has been considerable progress towards uniformity and improved procedure in recent years.

Complete figures for tax-exempt properties are not available for each province but the information given shows that these properties have assumed relatively high proportions.

¹ Includes the following: N.S.—household tax, Halifax; N.B.—occupancy tax, Fredericton, and rentals tax, Moncton; Sask.—special franchise. ² Total of valuations assessed but exempt from taxation. Excludes exempt property not assessed.

³ Taxes are levied on rental values in some municipalities using a property base. ⁴ Includes estimated values for some municipalities; total exemptions are incomplete.

⁵ Includes personal property tax for local improvement districts and commissions, not separable.

Subsection 2.—Municipal Taxation

Table 36 shows the local taxes levied by municipalities and by some school authorities in the years 1949-53 and the total taxes outstanding at the end of those years.

36.—Municipal Taxation by Province 1949-53

¹ Does not include schools; information not available. taxes (see text following this table).² Excludes certain provincial and other special

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 36 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table 36 are as follows:—

Subsection 3.—Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946 the trend was downward but since 1947 it has shown a considerable increase.

Several important factors contributed to the 1933-46 decline—not least important the measure of control exercised by the provincial governments over capital expenditure involving the incurring of debt. In addition there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, resulted in the severe curtailment of capital undertakings and works requiring debenture financing. Also the greater part of the municipal longterm debt was represented by serial or instalment type debentures which require yearly repayments of principal. During the 1930's the rehabilitation of existing assets and new works and improvements necessitated by normal expansion and development were sacrificed mainly in the interests of the taxpayers. After the outbreak of war in 1939 the policy of deferment was continued, or even extended, to free the financial market for the needs of the Federal Government in meeting war-financing requirements. Since the end of the War however municipalities have resumed their improvement programs and thus have increased their debenture debts. Table 37 shows figures of municipal indebtedness for 1952-53 and includes temporary loans and other liabilities in addition to debenture debt.

37.—Debt of Municipal and School Corporations by Province for their Fiscal Years Ended in 1953

NOTE.—Figures shown are compiled from published reports of provincial Departments of Municipal Affairs, auditors reports and financial statements of municipalities and information secured from other official sources.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—National Accounts*

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as changes in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 3 in constant dollars (i.e., in terms of average prices prevailing in the period 1935-39). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

The tables in this Section cover the more important aspects of the national income analysis in annual terms. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure and their components and other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus depreciation allowances and similar business costs.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government such as family allowances, unemployment insurance benefits and war service gratuities, in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Historical Perspective.—A brief commentary at p. 1168 of the 1955 Year Book covers economic trends since 1926 and is followed by a more detailed account of the impressive expansion in production and income during the postwar period to 1953.

Current Perspective.—*Gross National Product and National Income.*—The year 1954 was one of adjustment for the Canadian economy. In that year for the first time since 1946 Canada's gross national product declined. The drop of almost 2 p.c. from \$24,449,000,000 in 1953 to \$24,041,000,000 reflected a decline in the value of farm production; non-farm production showed a small increase of about 1 p.c., an increase completely accounted for by a slight rise in the domestic price level. This relative stability indicated by the year-over-year comparison obscures the fact that the contraction in industrial activity which began in the third quarter of 1953 was reversed by mid-1954 as gross national product moved upward in the last half of the year.

In the year-over-year comparison the experience of the various industrial groups in 1954 also varied considerably. The decline of about 4 p.c. in the manufacturing industries was offset by an increase in output of the primary industries (except agriculture), public utilities and service industries. Accompanying these developments on the production side, persons with jobs in the non-farm sector declined by about 1 p.c. in 1954. Despite this decline however labour income continued to rise throughout the year. Higher average hourly wage rates more than offset declines in total employment and average hours worked so that for the year as a whole wages, salaries and supplementary labour income, at \$11,989,000,000, were 2 p.c. above the level of 1953. This upward trend in wages and salaries throughout the year constituted an important stabilizing influence in the economy.

Investment income in 1954 declined about 2 p.c. from \$3,800,000,000 in 1953 to \$3,715,000,000 in 1954, caused mainly by an estimated decline of 6 p.c. in corporation profits which constitute a major component of investment income. Interest and net rental income of persons rose by about 10 p.c. in 1954.

Accrued net income of farm operators from farm production declined about one-third from \$1,653,000,000 in 1953 to \$1,058,000,000 in 1954. The decline was accounted for by a drop of more than \$500,000,000 in the value of crop production which reflected adverse weather conditions and severe rust damage to the grain crop in the western provinces. The net income of non-farm unincorporated business also declined somewhat from the 1953 total, amounting to \$1,645,000,000 in 1954. Certain industry groups however such as professional services and construction, recorded gains in the same comparison.

Gross National Expenditure.—Consumer expenditure and investment in new housing construction were the two important sustaining influences on the demand side in 1954. With the exception of government expenditure on goods and services, which remained level, all other major expenditure categories showed declines in 1954 as compared with 1953. During the period of the downturn in production (mid-1953 to mid-1954) the declines in the seasonally adjusted expenditure components were particularly sharp but from mid-1954 to the end of the year all expenditure items were rising again with the exception of outlays for new machinery and equipment.

The major expansionary force in the economy in 1954 was personal expenditure on goods and services which rose 4 p.c. to \$15,676,000,000 from \$15,125,000,000 in 1953. This was supported by higher labour income and interest and net rental income of persons together with increases in other components of personal income. Expenditures for services were higher by 8 p.c. and for non-durable goods by 3 p.c. but expenditures for durable goods declined by 6 p.c. With prices slightly higher than in the preceding year the volume increase in total personal expenditure amounted to approximately 3 p.c.

As already stated expenditure for goods and services by all levels of government remained practically unchanged in 1954 at \$4,361,000,000. A decline at the federal level of about 4 p.c. from 1953, concentrated in defence expenditure, was offset by gains of 5 p.c. and 7 p.c. respectively in provincial and municipal government expenditures.

The steady growth in outlays for capital goods, a prominent feature of the postwar period, was interrupted in 1954. Gross domestic investment (including inventory change) declined by 6 p.c. from \$4,840,000,000 in 1953 to \$4,553,000,000 in 1954, a decline more than accounted for by sharply reduced outlays for machinery and equipment (off by 17 p.c.) and by somewhat smaller expenditures for new non-residential construction (off by 2 p.c.). On the other hand outlays for new housing continued to increase, gaining 10 p.c. over 1953. In this connection it may be noted that a change in the National Housing Act in early 1954 reduced downpayment requirements on houses and extended the repayment period of mortgage loans; also a change in the Bank Act permitted the chartered banks to extend loans on home mortgages. Price changes were fairly small in the components of gross domestic investment in 1954 so that volume changes did not differ significantly from value changes.

Inventory developments were of major importance in the changes that occurred in the annual levels of production in 1954. As compared with 1953 the inventory sector shifted from a position of substantial net accumulation amounting to \$549,000,000 to a position of net liquidation of \$280,000,000. This represented a turn-around of \$829,000,000 or 3 p.c. of gross national product, more than half of which was attributable to movements in business inventories, particularly in manufacturing; the remainder was accounted for by depletions in grain and farm-held inventories in 1954 as compared with some accumulation in 1953.

Exports of goods and services declined 5 p.c. from \$5,400,000,000 in 1953 to \$5,136,000,000 in 1954. Exports of grain and flour dropped by \$295,000,000, reflecting the improved world supply position of wheat and coarse grains, and constituted the major factor in the decline in exports since the third quarter of 1953. Other exports were well maintained as a whole, although the experience of individual items varied. Imports of goods and services also declined 5 p.c. during the year, amounting to \$5,562,000,000 as compared with \$5,843,000,000 in 1953.

The deficit of \$426,000,000 for 1954 was slightly less than the deficit of \$443,000,000 for 1953. Export prices were a little lower and import prices were approximately unchanged so that there was a small deterioration in the terms of trade. The decline in imports of foreign goods however helped to offset the downward effect that the declines in the various demand factors exercised on total Canadian production.

Personal Income, Expenditure and Saving.—Although earnings from current production, as measured by the national income tabulations, were lower in 1954 (reflecting mainly the drop in accrued net income of farm operators and in corporation profits), the flow of income payments to persons was maintained and personal income amounted to \$18,173,000,000, a figure slightly higher than that for 1953. This stability in personal income resulted from the fact that labour income and interest and net income of persons were higher in 1954 and that, despite a drop in corporation profits, dividend payments to persons increased somewhat. Furthermore there was also a substantial increase in transfer payments from government, particularly in unemployment insurance benefits; transfer payments of \$1,601,000,000 in 1954 compared with \$1,460,000,000 in 1953.

As personal direct taxes remained at about the same level in 1954, personal disposable income, which amounted to \$16,747,000,000, was maintained in that year. Personal savings dropped to \$1,071,000,000 from \$1,600,000,000 in 1953 and constituted 6.4 p.c. of personal disposable income compared with 9.6 p.c. in 1953. With stability in income and a decline in the proportion of income saved, personal expenditure on consumer goods and services continued its upward trend.

Section 2.—Canada's International Investment Position*

Since 1948 there has been a sharp rise in the amount of non-resident capital invested in Canada and Canada's balance of international indebtedness had by 1955 risen to a new peak of close to \$7,500,000,000. The earlier peak of international indebtedness occurred in 1930 when it amounted to about \$6,500,000,000. This indebtedness had been accumulated in several periods of rapid Canadian growth in which dependence on external sources of capital was much greater than it is now. In the period ending in 1914, characterized by railway and other expansion associated with the opening of the Canadian West, Great Britain was the principal external source of capital. In the inter-war period of growth which followed, culminating in the early 1930's, there was a very great rise in

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in DBS report, *Canada's International Investment Position, 1926 to 1954* and some more recent statistics in the report, *The Canadian Balance of International Payments, 1955, and International Investment Position*.

United States investments in Canada and capital from that country supplemented domestic capital in the development of Canadian industry. During the next decade and a half, Canada was a consistent net exporter of capital. In the later 1930's before the outbreak of the second world war when economic and investment activity in Canada was still subnormal, Canada's balance of indebtedness to other countries was reduced moderately, mainly by repatriations and other withdrawals of capital. Later that reduction was sharpened by special measures associated with wartime and early postwar arrangements for financing the movement of Canadian commodities abroad. The reductions in balance of indebtedness occurred through official repatriations of securities from the United Kingdom, by the extension of Canadian loans to the United Kingdom and other overseas countries, and by a rise in Canada's official reserves of gold and foreign exchange.

Considering the great economic development that has taken place in Canada since 1948 the actual burden of the rising balance of indebtedness is likely to be very much less than it was during the earlier development periods.

Foreign Investments in Canada.—Foreign investments in Canada reached a new peak by the end of 1955, rising to well over \$13,000,000,000 from \$12,469,000,000 at the end of 1954. Almost half of the outside capital invested in Canada during the present century has come in since the end of World War II, the greater part of it after 1948. In absolute terms this postwar investment is much heavier than that during the earlier growth periods even though Canada is much less dependent upon foreign capital than it was then.

United States investments, which reached \$9,622,000,000 at the end of 1954, have accounted for the greater part of the increase since 1948 and in 1954 constituted more than three-quarters of the total non-resident capital invested in Canada. Recent growth of investments owned in the United Kingdom and western Europe has also been of significant proportions: British investments in 1954 reached a new postwar peak at \$2,143,000,000 and investments by other overseas countries amounted to \$704,000,000. However because of the sharp decline in British investments during and immediately following World War II, investments by British and overseas countries in 1954 were just about at their 1926 level, whereas United States investments were three times as large as they were in 1926.

A striking feature of the recent growth in foreign investment has been the extent to which it has been concentrated in Canadian business. More than 90 p.c. of all the postwar non-resident capital invested in Canada—British, other overseas and United States investment—has been placed in Canadian business, more than 50 p.c. of it in manufacturing, over 25 p.c. in mining, smelting and petroleum exploration and development, and most of the remainder in merchandising, financial institutions and utilities. While each of the main groups of manufacturing industries has received a share, concentration has been most marked in the pulp and paper, metal products, and chemical industries and in establishments engaged in petroleum refining.

Another noteworthy feature in the investment picture is the increase in the proportion of direct investments controlled outside of Canada; such investments more than doubled in value from 1948 to 1954 through transfers of capital and retained earnings. In the manufacturing and mining industries non-resident investments constituted more than half of the total investments in these industries from 1948 to 1954. In the petroleum industry alone, which cuts across these two branches, non-resident investment made up about two-thirds of the total. Statistical studies of resident and non-resident shares of ownership have revealed also that, after omitting the predominant non-resident contribution to capital invested in the petroleum industry, non-residents have also contributed about 50 p.c. of the increased investment in other manufacturing industries and more than two-thirds of the increase in other mining industries. However these high ratios contributed by non-residents are not typical of other spheres of Canadian business. For

example non-resident ownership represented less than 10 p.c. of the rise of investments in the same period in the railway, other utility and merchandising sectors and an even smaller proportion in the areas of investment where the savings of Canadian individuals and governments are leading sources of financing.

As a result of these divergent trends in recent financing non-resident ownership of Canadian manufacturing and mining constitutes higher ratios than ever before. By 1953 non-resident ownership of Canadian manufacturing industries had risen to 47 p.c. from 42 p.c. in 1948 and 38 p.c. in 1926, and non-resident ownership in the sphere of mining, smelting and petroleum exploration and development had risen to 56 p.c. from 39 p.c. and 36 p.c. in 1948 and 1926 respectively. But the opposite trend in the ownership of railways and other utilities and low percentages in merchandising have generally offset the rising trend in manufacturing and mining. In merchandising non-resident ownership continued to be about 32 p.c. in 1953 as in 1948 and compares with a slightly higher percentage in 1926.

The changes have of course been greatest in investments owned in the United States, for which the proportion has increased to 25 p.c. in 1953 from 23 p.c. in 1948 and 19 p.c. in 1926. In the petroleum industry alone United States ownership amounted to 56 p.c. of the total capital employed in 1953 and in other mining industries to about 50 p.c. In manufacturing, other than petroleum refining, the United States ownership in 1953 was about 35 p.c. while the United Kingdom and other overseas countries owned 9 p.c.

When investments are classified according to country of control, the ratios indicated as invested in companies controlled outside of Canada are higher than the ratios of ownership in the area of manufacturing and mining and have risen to a greater extent throughout the period from 1926. In 1953 approximately 50 p.c. of the capital invested in Canadian manufacturing was in companies controlled outside of Canada compared with 43 p.c. in 1948 and 35 p.c. in 1926. In mining, smelting and petroleum exploration and development the corresponding ratios were 57 p.c., 40 p.c. and 38 p.c. In the petroleum industry alone in all its establishments, non-resident control amounted to about 70 p.c. in 1953. On the other hand the proportion of non-resident control of public utilities was comparatively minor and was less than in 1926. In the broad area of Canadian business covered by industry, railways, utilities and merchandising, the ratio of non-resident control was approximately 28 p.c. compared with 25 p.c. in 1948 and 17 p.c. in 1926.

Great variations exist in both ownership and control of the different branches of industry. In such industries as textiles and primary iron and steel, Canadian ownership is 80 p.c. or more and the proportion of Canadian control is even higher. The opposite situation prevails in such industries as automobiles and parts, and rubber products where the greater proportion is controlled abroad. These illustrations however tend to be extreme. Other industries are more evenly divided: 63 p.c. of the agricultural implements industry is owned in Canada, 48 p.c. of the pulp and paper industry, 39 p.c. of the chemical industry and 35 p.c. of the electrical apparatus industry.

Some additional light on the place of foreign-controlled businesses in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments, having an investment of \$1,000,000 or more, accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios were considerably higher than those for 1946, when a similar study was made; for that year the corresponding ratios were 22 p.c. and 16 p.c., respectively. In many industries the proportions were of course much higher. Among those in which well over half of the Canadian production was accounted for by United States controlled firms were the smelting and refining of non-ferrous metals, petroleum refining, automobile parts, rubber products and machinery. The concentration of foreign-controlled production is in Ontario where about 40 p.c. of the value of manufacturing output came from the larger United States controlled plants.

9.—Estimate of the Canadian Balance of International Indebtedness as at Dec. 31, 1939-54

NOTE.—Totals are rounded and may not represent the sum of their components. They are exclusive of short term commercial indebtedness and blocked currencies.

Canadian Assets Abroad.—Canada's external assets have changed greatly in size and composition in recent years. The total value, including holdings of gold and foreign currencies, rose from about \$1,900,000,000 in 1939 to \$6,900,000,000 at the end of 1954. The principal factor in this increase was the extension by the Federal Government of loans and export credits to the United Kingdom and other countries. At the end of 1954 Canadian Government credits outstanding totalled approximately \$1,705,000,000 and by the end of 1955 about \$1,635,000,000. The latter total includes \$90,000,000 outstanding on the 1942 loan to the United Kingdom, \$1,112,000,000 on the 1946 loan to the United Kingdom and about \$400,000,000 of postwar export credits and advances. In addition at the end of 1954 official holdings of gold and foreign exchange aggregated about \$1,888,000,000. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank and the International Monetary Fund, which by March 1955 amounted to \$70,900,000 and \$293,400,000 respectively. A small part of the subscription to the Bank was in the form of convertible exchange and \$75,000,000 of the subscription to the Fund was in gold. The remainder of both subscriptions was made in the form of demand notes of the Federal Government or in Canadian funds.

Besides the officially owned assets referred to above, there were privately owned investments in the form of foreign securities and property owned by Canadian companies and individuals. In 1939 these privately owned assets constituted most of the total value of Canadian assets abroad, whereas since the end of World War II they have made up only a minor part of the total, chiefly because of the sharp rise in officially owned assets. Canadian assets abroad at the end of 1954 included privately owned longterm direct and portfolio investments valued at \$2,570,000,000. These have risen from \$1,300,000,000 at the end of 1945, a rate of increase somewhat higher than for foreign private longterm investment in Canada.

About two-thirds of Canada's direct investments abroad are in the United States. These investments, on a per capita basis, are about twice the value of United States direct investments in Canada and are mainly in the beverage, farm implement and petroleum industries and in railways, though a wide range of other establishments is also involved. Investment in other parts of the world is widely distributed and is to be found particularly in industrial and commercial firms, mining and utilities. About two-thirds of the portfolio holdings abroad are also in the form of United States securities but Canada has extensive portfolio investments in other parts of the world, particularly Latin America.

12.—Canadian Assets Abroad 1939-54

(Millions of dollars)

NOTE.—Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

Section 3.—Corporation Profits and Income to Shareholders

Data on corporation profits, taxes and dividends presented in Table 14 cover all corporations and are for calendar years. The data have been adjusted in order to conform to national accounts concepts. For the years 1944 to 1954 these figures are based on the Department of National Revenue annual report *Taxation Statistics*. Prior to 1944 corporate financial statistics are based on a study conducted in the Department of National Revenue.

From a peak of \$530,000,000 in 1929 corporation profits before taxes declined during the depression to a low of \$17,000,000 in 1932 and then rose gradually to a wartime high of \$1,292,000,000 in 1942. During the postwar period corporation profits gained steadily and reached an alltime record of \$2,810,000,000 in 1951; thereafter they showed small annual declines and were down by 14 p.c. from the 1951 peak to a figure of \$2,420,000,000 in 1954.

In 1954 corporation taxes took about 48 p.c. of total corporation profits before payment of dividends; yet, although corporation profits declined between 1953 and 1954, dividend payments to shareholders showed a gain of about 5 p.c.

¹ Include depletion charges and charitable donations, and are adjusted for corporate losses, renegotiation of war contracts and conversion to a calendar-year basis. ² Includes elective tax on undistributed income of \$48,000,000 in 1951, \$10,000,000 in 1952, \$10,000,000 in 1953, and \$7,000,000 in 1954.

According to the corporation profits survey, results of which are given in Table 15, profits before taxes declined from \$2,580,000,000 in 1953 to \$2,390,000,000 in 1954, a decrease of 7.4 p.c. Five of the 18 industrial groups included showed increases and 13 recorded decreases. The greatest decrease occurred in the iron and steel industry. Profits after taxes followed approximately the same trend, with a decline of 9.2 p.c.

Section 4.—Federal Incorporation of Companies

During the year ended Mar. 31, 1954 letters patent were granted incorporating 840 companies under Part I and 36 corporations without share capital under Part II of the Companies Act. Supplementary letters patent were granted to 409 existing companies and to eight existing corporations without share capital; seven certificates were issued to existing companies increasing the amount of the consideration to be received for the issuance of shares without nominal or par value. Under Part IV of the Act one licence was issued to a mining company to carry on mining operations.

Compilation of the capitalization of the companies incorporated under the Companies Act is no longer available. Figures for 1943-52 are given at p. 1123 of the 1954 Year Book and those for 1900-1942 in previous issues.

PART I.—CURRENCY AND BANKING*

A historical sketch of currency and banking in Canada appears in the 1938 Year Book, pp. 900-905.

Section 1.—The Bank of Canada

The Bank of Canada was incorporated under the Bank of Canada Act 1934 and commenced operations on Mar. 11, 1935.

The Bank of Canada is Canada's central bank and as such its main function is to regulate the total volume of money and credit. The normal way in which this function is performed is through changes in the cash reserves of the chartered banks. Each chartered bank is required by the Bank Act to maintain, on the average during each calendar month, an amount of cash reserves, in the form of Bank of Canada notes and deposits with the Bank of Canada, equal to not less than 8 p.c. of its Canadian dollar deposit liabilities. (Prior to July 1, 1954, each chartered bank was required to maintain at all times, cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice the chartered banks normally attempted to maintain a ratio of about 10 p.c.) An increase in cash reserves encourages banks to expand their assets (mainly by purchasing securities and making loans), with a resultant similar increase in their deposit liabilities; a decrease in cash reserves tends to discourage expansion and may result in some contraction. Therefore, by taking steps to alter the volume of cash reserves available to the chartered banks, the Bank of Canada is able to influence the total of chartered bank assets and the total of their Canadian dollar deposit liabilities. The deposit liabilities of the banks, except for those payable to the Government, are of course assets of the general public and, together with currency, comprise their most liquid assets. (See pp. 1107-1108 for discussion of general public holdings of liquid assets.)

* Except where otherwise indicated, this material has been revised by the Research Division of the Bank of Canada.

Open market operations in Government of Canada securities constitute the chief means by which the Bank of Canada influences the volume of chartered banks' reserves. When the Bank of Canada purchases a security it issues a cheque in settlement which, after it is cashed at, or deposited with, a chartered bank by the recipient, is in turn deposited by that chartered bank in its account with the Bank of Canada, thereby increasing its cash reserves. Conversely when the Bank of Canada sells a security the cheque which it receives in payment is charged against the account of the chartered bank on which it is drawn thus decreasing that bank's cash reserves. Increases or decreases in other assets and liabilities of the Bank of Canada also have an effect on the chartered banks' cash reserves. For example an increase in the amount of Bank of Canada notes held by the general public tends to reduce the banks' cash reserves.

The powers of the Bank are set forth in the Bank of Canada Act 1934 (R.S.C. 1952, c. 13), revisions to which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank of Canada may vary the minimum cash reserve requirements of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on June 1, 1954 the initial requirement was 8 p.c. and it has since remained at that level.

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances.

This rate, known as the Bank Rate, stood at 2 p.c. per annum from Oct. 17, 1950 to Feb. 14, 1955 when it was reduced to 1½ p.c. At that time the Bank issued a statement noting in part that "In the past, Bank Rate has been changed infrequently in Canada and little use has been made of the Bank's facilities. The growth in the breadth and scale of activity in the short term money market over the past two years has made it desirable that the Bank Rate be made flexible and bear a closer (though not fixed) relation to other short term interest rates. The present adjustment will help to make Bank Rate a more significant factor in the money market and facilitate its more flexible use in the future as circumstances may require. While the structure of short term interest rates, including Bank Rate, provides an index of monetary conditions, it does not follow that every change in Bank Rate or in the level of other short rates necessarily indicates a change in general economic conditions." The Bank Rate was raised to 2 p.c. on Aug. 5, 1955, to 2½ p.c. on Oct. 12, 1955 and to 2¾ p.c. on Nov. 18, 1955. The rate was increased to 3 p.c. on Apr. 4, 1956 and to 3¼ p.c. on Aug. 10, 1956.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on pp. 1105-1106.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short term securities issued by the United Kingdom, treasury bills or other obligations of the United States, and certain classes of short term commercial paper. The Bank is

authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

Sect. 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form part of Canada's official gold and United States dollar reserves. The requirement is still in suspension. The Currency, Mint and Exchange Fund Act passed in 1952 provides that, notwithstanding Sect. 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council otherwise prescribes.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its every decision must be submitted to the Board at its next meeting.

In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors who are appointed by the Board of Directors to perform such duties as are assigned to them by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such a veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is \$5,000,000 and is entirely held by the Minister of Finance. The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1955 the Rest Fund of the Bank reached its maximum of \$25,000,000 so that in future the whole of the Bank's profits will be paid to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are chiefly concerned with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on pp. 1103-1104, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and the last day of each month be published in the *Canada Gazette*. A summary of the statement as at Dec. 31, 1953-55 appears in Table 1.

1.—Assets and Liabilities of the Bank of Canada as at Dec. 31, 1953-55

¹ Before the transfer of Bank of Canada profits for the year ended Dec. 31 from "All other liabilities" to "Government of Canada deposits" and "Rest Fund".

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada. The \$25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

Industrial enterprises, as defined by the Act (amended in 1956) include: (1) manufacturing, processing, assembling, installing, overhauling, reconditioning, altering, repairing, cleaning, packaging, transporting or warehousing of goods; (2) logging, operating a mine or quarry, drilling, construction, engineering, technical surveys or scientific research; (3) generating or distributing electricity or operating a commercial air service, or the transportation of persons, or (4) supplying premises, machinery or equipment for any business mentioned in (1), (2) or (3) under a lease, contract or other arrangement whereby title to the premises, machinery or equipment is retained by the supplier.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

2.—Authorized and Outstanding Loans and Investments of the Industrial Development Bank by Province and Industry as at Sept. 30, 1955

¹ Because of partial repayments on account of current authorizations the net authorizations were \$52,563,399 of which those in excess of \$200,000 totalled \$26,144,910.

Section 2.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revisions of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945 and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

The classification of Bank of Canada notes in circulation by denomination shown in Table 3 for 1952-55 is not strictly comparable with the classification for earlier years. Dominion notes have been excluded from the denomination classification and the total only is shown. Also an item has been added showing the outstanding chartered bank notes issued originally for circulation in Canada. The statistics of total notes in the hands of the general public are comparable with earlier years.

3.—Bank of Canada Notes by Denomination and Other Notes in Circulation as at Dec. 31, 1952-55

Denomination	1952	1953	1954	1955

4.—Note Circulation in the Hands of the Public as at Dec. 31, 1946-55

NOTE.—Newfoundland has long used Canadian bank notes so that when that Province united with Canada in 1949 no adjustment was necessary in the circulation figures, but the effect of including the population of Newfoundland from 1949 was to reduce the per capita note circulation by an estimated \$1.

Year	Bank of Canada Notes ¹	Chartered Bank Notes ²	Total	Per Capita ³
	\$	\$	\$	\$
1946.....	1,009,340,325	21,422,006	1,030,762,331	83.86
1947.....	1,027,439,799	18,202,477	1,045,642,276	83.31
1948.....	1,098,290,534	16,246,036	1,114,536,570	86.92
1949.....	1,095,652,035	13,990,117	1,109,642,152	82.52
1950.....	1,136,115,742	4	1,136,115,742	82.86

1953.....	1,335,332,954	4	1,335,332,954	90.34
1954.....	1,361,874,433	4	1,361,874,433	89.63
1955.....	1,449,045,166	4	1,449,045,166	92.88

¹ Total issue less notes held by chartered banks.

² Gross note circulation only; notes held by other

chartered banks are not available. Includes, prior to 1950, a relatively small amount issued for circulation outside Canada.

³ Figures based on estimates of population as given at p. 151; see headnote to this table. ⁴ In January 1950, the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada.

Coinage.—Under the Currency, Mint and Exchange Fund Act (R.S.C. 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five cent coins; and bronze (copper, tin and zinc) one cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

5.—Canadian Coin in Circulation as at Dec. 31, 1945-55

NOTE.—The figures shown are of net issues of coin. Figures from 1901 are shown in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Year	Silver	Nickel	Tombac ¹	Steel	Bronze	Total	Per Capita ²

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

² Per capita figures are based on estimates of population as given at p. 151.

The Royal Canadian Mint.—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (21-22 Geo. V, c. 48) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 oz.t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz.t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped to various domestic and foreign processors. The fine silver extracted from the rough gold is generally used for coinage purposes.

6.—Annual Receipts of Gold Bullion at the Royal Canadian Mint and Bullion and Coinage Issued 1945-55

Subsection 2.—General Public Holdings of Certain Liquid Assets

The Bank of Canada's presentation of statistics concerning the volume of money is given in Table 7. This shows not only currency and active bank deposits but also inactive chartered bank deposits and Government of Canada securities which, although not used to make payments, are forms in which the public holds its liquid funds.

7.—General Public Holdings of Certain Liquid Assets as at Dec. 31, 1946-55

(Millions of dollars)

Year	Currency and Active Bank Deposits	Inactive Chartered Bank Notice Deposits ¹	Government of Canada Securities ²	Total
1946.....	3,996	2,856	11,174	18,026
1947.....	3,944	3,143	10,763	17,850
1948.....	4,335	3,408	10,249	17,992
1949.....	4,422	3,751	9,902	18,075
1950.....	4,851	3,861	10,066	18,778
1951.....	4,843	3,894	9,388	18,125

1954.....	5,456	4,712	8,713	18,881
1955.....	5,791	5,122	9,083	19,996

¹ Estimated aggregate minimum quarterly balances in chartered bank personal savings deposits in Canada plus non-personal notice deposits in Canada.

² Holdings of all investors, other than the Bank of Canada, chartered banks and Government of Canada accounts. Includes direct and guaranteed securities (including refundable taxes) at par. Direct debt includes both matured and unmatured issues outstanding, exclusive of sinking fund holdings; guaranteed debt is included on the basis of total unmatured issues outstanding; Newfoundland debt assumed by the Government of Canada has been included since June 1949. Foreign pay securities have been valued at official mid-rates of exchange to Sept. 30, 1950, and at market rates thereafter.

In measuring currency and active bank deposits it is necessary to decide which categories of bank deposits should be classed as active and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings. Generally it has been satisfactory to classify bank deposits as active if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada however cheques are, in practice, drawn freely against savings deposits and this poses an awkward problem. To omit all savings deposits of chartered banks would ignore the obvious fact that, for many people, a savings account is an active chequeing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits.

It is felt therefore that a more realistic account of monetary developments in Canada—and one more comparable with the usual presentation of similar statistics in other countries—is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from active money statistics. It has seemed preferable to exclude these deposits on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In general the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Government of Canada deposits from the Canadian active money figures.

8.—Summary Statistics of Currency and Active Bank Deposits as at Dec. 31, 1946-55

(Millions of dollars)

Year	Currency Outside Banks ¹			Active Bank Deposits			Total Currency and Active Bank Deposits

¹ Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks. ² Demand and notice deposits, deposits of provincial governments, United Kingdom and foreign banks; less 'float', i. e., items in transit as shown in month-end returns. ³ Excludes Government of Canada, chartered bank and foreign deposits.

Section 3.—Commercial Banking

As one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in one historical sketch, which is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies from Confederation; the last insolvency occurred in 1923. The more important of the revisions in banking legislation contained in the 1954 Bank Act are outlined in Subsection 1.

Subsection 1.—Chartered Banks

Canadian commercial banks are chartered or licensed by the Government of Canada and operate under one federal statute—the Bank Act—which is revised every ten years and brought into line with changing economic conditions. In addition to conducting a commercial banking business the chartered banks hold most of the public's savings deposits.

Revisions in Banking Legislation in 1954.—In 1954 there were a number of important changes in legislation affecting the operations of the chartered banks, arising out of the decennial revision of the Bank Act and revisions of the Bank of Canada Act and the National Housing Act.

An amendment to the Bank Act concerned the minimum cash reserves which the chartered banks are required to hold in the form of notes of and deposits with the Bank of Canada. The banks had been required to maintain at all times cash reserves of not less than 5 p.c. of their Canadian dollar deposit liabilities. In practice they normally attempted to maintain a ratio of about 10 p.c. As a result of the amendment the banks are now required to maintain cash reserves, on the average during each calendar month, equal to not less than 8 p.c. of their Canadian dollar deposit liabilities. In conjunction with this change an amendment was made to the Bank of Canada Act which gives the Bank of Canada power to vary the minimum cash reserve requirement between 8 p.c. and 12 p.c. of Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum period of one month's notice before each increase becomes effective and that the increase effective in any one month is not more than 1 p.c.

The National Housing Act 1954 gives the chartered banks authority to lend money for residential construction on the security of mortgages insured by a government agency. Prior to 1954 the Bank Act had prohibited the chartered banks from lending money on the security of mortgages on real or immovable property, except for loans made under the terms of the Farm Improvements Loans Act of 1944 and the Veterans Business and Professional Loans Act of 1946.

Another amendment to the Bank Act allows the banks to lend money to individuals, other than manufacturers or dealers, on the security of motor vehicles or any other personal or movable household property.

With the development of the Canadian oil industry a new section has been added to the Bank Act which allows oil loans to be made on various types of security including oil in the ground.

The amount of capital which a newly incorporated bank must have before it commences business has been doubled. The requirements are now a minimum subscribed capital of \$1,000,000 and a minimum paid-up capital of \$500,000. The previous requirements had been in effect since 1890.

Another amendment to the Bank Act was related to the problem of raising new capital. Under the provisions of the old Act there were difficulties attached to making a new issue of capital stock if the bank concerned had shareholders resident in countries where considerable detailed information (which banks are not required to make public in Canada) must be filed before the issue of capital stock is approved. The amendment relieves banks of the obligation to make offerings to shareholders resident in such countries.

After 1935 the chartered banks' note circulation in Canada was gradually withdrawn and in July 1950 the banks paid to the Bank of Canada approximately \$13,500,000, an amount equal to their outstanding Canadian notes, and thereafter the Bank of Canada became liable to redeem the notes on presentation. Some of the banks with foreign branches have continued to maintain a small issue of foreign currency notes but the costs, including taxes, have made it an unprofitable operation. The Bank Act now provides that all note issuing privileges of the banks shall cease and also provides for methods of retiring the outstanding foreign note circulation. With the above mentioned payment by the chartered banks to the Bank of Canada, the additional liability, often referred to as the "double liability", which formerly attached to a bank's shares in proportion to its outstanding note issue, was cancelled. When there was additional liability attached to the bank's shares it was essential that the shares could be transferred only by registration on the books of the bank. As this is no longer necessary an amendment to the Bank Act provides that each bank, if it so wishes, may provide for another method of share transfer.

Liquid Asset Ratio.—In the course of discussions with the chartered banks in November and December 1955 the Bank of Canada urged the adoption of a standard practice regarding the maintenance of a minimum ratio of liquid assets (cash, day-to-day loans and treasury bills) to deposits. The purpose of this suggestion was to establish a working principle of bank operations which would help the central bank in the task of restraining inflationary pressures that might threaten in the future. After discussion the banks agreed to work to achieve by May 31, 1956 a minimum liquid asset ratio of 15 p.c. which they would endeavour to maintain on a daily average basis from June on. On this basis fluctuations above or below 15 p.c. might occur from day to day or week to week, but for the month as a whole the average would not be below the target ratio.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. Owing mainly to amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—the Mercantile Bank of Canada—in 1953 brought the total to 11. Since

then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as the Toronto-Dominion Bank, and the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 has reduced this number to nine. The number of branches of chartered banks in Canada is given in Table 9.

9.—Branches of Chartered Banks by Province as at Dec. 31 for Certain Years 1868-1955

NOTE.—Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 708 such sub-agencies in 1955.

Financial Statistics of the Chartered Banks.—The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act 1954, so that some of the statistics given in the following tables are not comparable with those appearing in earlier editions of the Year Book. Figures shown in Tables 12 to 14 prior to July 1954 have been adjusted to comply with the new classification. Month-end data are available from Dec. 31, 1954 to date in the Bank of Canada *Statistical Summary*.

¹ Includes figures for eleven months only for two banks (accounting on the average for 7.3 p.c. of total bank assets) which changed their financial year-ends from Nov. 30 to Oct. 31. ² Before provision for income taxes and losses and additions to inner reserves. ³ Includes capital profits and losses and non-recurring items.

⁴ After deduction of re-transfers from inner reserves to undivided profits and rest account amounting to \$17,000,000 in 1953 and \$48,000,000 in 1954. ⁵ Includes provision for income taxes on the taxable portion of additions to inner reserves and on that portion of the funds re-transferred from inner reserves not taxed previously. Includes foreign income taxes.

⁶ Includes increase of \$400,000 in rest account and \$1,500,000 in capital paid up which represented the capital of a bank that commenced business in December 1953.

Cheque Payments.—The monthly record of amounts of cheques charged to customers' accounts at all chartered bank offices situated in the clearing-house centres of Canada is available from 1924. The trend indicated by cheques cashed shows the occurrence of three major economic cycles since World War I. The first reached its peak in 1920 with the low point of the succeeding depression in 1922. A high was next achieved in 1929, owing partly to economic conditions involving heavy stock speculation, followed by a low point in 1932. Since then, except for a minor setback in 1938, an upward trend has continued.

The amount of cheques cashed in the clearing-house centres advanced to a maximum of \$148,062,795,949 for 35 centres in 1954; this was 379 p.c. greater than in 1938, the increase paralleling the upward movement of gross national production during the same period. The advance was general in Canada's five economic areas. British Columbia showed the largest gain in this comparison with an increase of 517 p.c. The Atlantic Provinces* recorded the second largest advance of 445 p.c., followed by the Prairie Provinces, Ontario and Quebec. All areas except the Prairie Provinces, where a drop of 4 p.c. reflected decreased grain transactions, showed gains over 1953, Ontario and Quebec accounting for most of the \$10,000,000,000 advance.

Cheques cashed in 16 of the 35 centres showed increases in 1954 as compared with the preceding year. Payments in Canada's two leading centres attained historical maxima, Toronto advancing almost 19 p.c. and Montreal nearly 13 p.c. The sharp drop in grain production during 1954 contributed to the declines recorded by most western centres. Edmonton was the only centre in the Prairie Provinces to show an increase.

* Includes St. John's, Nfld., in 1954, which was excluded in the 1938 data. Excluding St. John's in 1954, ranking would be: Prairie Provinces, Ontario, Maritime Provinces and Quebec.

18.—Cheques Cashed at 35 Clearing-house Centres 1950-54

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books.

¹ Excludes some debits reported in preceding years.² Included from May 1950.

Subsection 2.—Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Federal Department of Finance. Other agencies for the promotion of thrift, through encouraging regular savings, are the co-operative credit unions.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Government of Canada’s Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929.

Summary financial statistics for the years ended Mar. 31, 1951-55 follow. Figures back to 1868 are available in previous editions of the Year Book.

<i>Item</i>	<i>1951</i>	<i>1952</i>	<i>1953</i>	<i>1954</i>	<i>1955</i>

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Newfoundland, Ontario and Alberta.

Newfoundland.—The Newfoundland Savings Bank was established in 1834 and the following is a summary financial statement for the years ended Mar. 31, 1952-54:—

<i>Item</i>	<i>1952</i>	<i>1953</i>	<i>1954</i>
	\$	\$	\$
Interest on investments, etc.....	765,752	790,653	892,218

Profit on sale of investments.....	2,093	5,215	81,020
Less: Interest on deposits.....	657,917	673,430	709,542
Less: Expenses.....	42,692	47,473	55,924
Less: Transfer to reserves.....	30,000	30,000	31,065
NET INCOME.....	37,236	47,554	179,665

The number of accounts increased from 35,136 at Mar. 31, 1954 to 36,078 at Mar. 31, 1955 and deposits increased from \$27,010,991 to \$28,151,709 in the same comparison. The interest rate on deposits of private individuals, trust accounts and estates is 3 p.c. per annum on accounts up to \$5,000, 2½ p.c. from \$5,001 to \$7,500, and 2 p.c. on accounts over \$7,500; on deposits of corporations the rate is 1 p.c. per annum. A general reserve of \$1,422,391 is held.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and the first branches were opened in March 1922. Interest at the rate of 1½ and 2 p.c. per annum, compounded half-yearly, is paid on accounts and deposits are repayable on demand. Total deposits at Mar. 31, 1955 were \$73,300,000, and the number of depositors was approximately 95,000. Twenty-one branches are in operation throughout the Province.

Alberta.—Savings deposits are accepted at 48 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1955 was \$21,635,125 payable on demand and bearing interest at from ½ of 1 p.c. to 2 p.c.

The Provincial Treasury has issued demand certificates bearing interest at $1\frac{1}{2}$ p.c. or term certificates for one, two, three, four or five years in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years, $2\frac{1}{2}$ p.c. for three or four years and $2\frac{1}{2}$ p.c. for five years. The total amount in savings certificates at Mar. 31, 1955 was \$229,526 made up of \$114,151 in demand certificates and \$115,375 in term certificates. Deposits from the public for the purchase of such certificates were discontinued as from April 1951.

Other Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1955, a paid-up capital and reserve of \$8,000,000, savings deposits of \$204,587,105 and total liabilities of \$213,268,779. Total assets amounted to \$213,268,779 including over \$163,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by 34 Vict., c. 7, had at Mar. 31, 1955 savings deposits of \$33,229,093 and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$37,980,181 and total assets to \$37,980,181.

The following statement shows the combined savings deposits in the Montreal City and District Savings Banks and La Banque d'Économie de Québec for the years ended Mar. 31, 1946-55. Figures back to 1868 are available in previous editions of the Year Book.

Credit Unions.*—Since its inception at the beginning of the twentieth century, the credit union movement in Canada has grown rapidly and steadily. At the end of 1954 3,920 credit unions held charters; the total membership reported by 3,690 credit unions was 1,560,715. From 1945 to 1954 almost 1,000,000 new members joined the movement and in 1954 about one Canadian in ten was a member of a credit union.

Savings and credit unions are organized on a co-operative basis to pool savings of members and to make loans to members. Members save by buying shares from and by making deposits in credit unions. Of total assets of credit unions amounting to \$552,362,571, \$510,722,956 or 92.5 p.c. was represented by savings of members. Deposits from members amounted to \$349,719,983 and share capital of members to \$161,002,973. Total savings per credit union averaged \$138,370 and savings per member averaged \$327.

The total amount of loans granted by credit unions for provident and productive purposes in 1954 was \$212,906,551. Such loans are granted from the accumulated pooled savings of the members and are to a large extent secured by personal notes. As the assets of credit unions have grown, the loans secured by personal notes have also increased.

With the rapid development of local credit unions, central credit unions have been organized in all provinces. Surplus funds of local credit unions and co-operatives may be invested or deposited in these central credit unions and local member credit unions and co-operatives may, in turn, borrow funds from them when necessary. By the end of 1954 26 central credit unions had been incorporated under provincial legislation, with total assets amounting to \$64,531,271, share capital of \$9,664,363 and deposits of \$46,225,493. The total loans granted to member credit unions and member co-operatives in 1954 amounted to \$23,065,740.

* Prepared by Paul G. Muller, Economics Division, Marketing Service, Department of Agriculture, Ottawa.

In 1954, after the Federal Government passed legislation, the Canadian Co-operative Credit Society was organized for the purpose of accepting surplus funds from central credit unions and borrowing money from member associations and banks. Loans by the Canadian Co-operative Credit Society may be made only to member societies holding a Federal Treasury Board certificate.

Section 4.—Foreign Exchange

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of World War I. During the first 11 years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date to 1914, the dollar in the two countries was equivalent at par and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of World War I, the United Kingdom and Canada suspended the gold standard and their currencies fell to a discount at New York. However this discount was 'pegged', or kept at a moderate percentage, by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War when the exchanges were 'unpegged', the British pound went as low as \$3.18 and the Canadian dollar as low as 82 cents at New York. In the course of the next year or two, exchange returned practically to par and the United Kingdom resumed gold payments in April 1925 as did Canada on July 1, 1926. Until 1928 the exchanges were within the gold points but in 1929 the Canadian dollar again fell to a moderate discount at New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points however only for a few scattered intervals. Immediately on the outbreak of World War II in September 1939 the United Kingdom and other sterling countries introduced foreign exchange control, involving fixed buying and selling rates which were \$4.02½ and \$4.03½ respectively in terms of the U.S. dollar. Meanwhile the Canadian dollar declined gradually until Sept. 16, 1939 when the Government established the Foreign Exchange Control Board.* Fixed buying and selling rates were provided for United States funds and sterling at the outset, being \$1.10 and \$1.11 and \$4.43 and \$4.47, respectively. The former rates fixed the value of the Canadian dollar at 90.09 cents to 90.91 cents in terms of the U.S. dollar; this was approximately the market rate to which the Canadian dollar had fallen just prior to exchange control and, in terms of devaluation, represented a level midway between the U.S. dollar and sterling.

Apart from a minor adjustment on Oct. 15, 1945 when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the Foreign Exchange Control Board's official rates remained unaltered until July 5, 1946. At this time the rate on the U.S. dollar was restored to par with buying and selling rates for U.S. dollars at \$1.00 and \$1.00½ and sterling, \$4.02 and \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5 p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (which action was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at new rates of \$3.07½ and \$3.08½, based on the New York cross rate.

On Sept. 30, 1950 the Minister of Finance announced that official fixed foreign exchange rates, which had been in effect at varying levels since 1939, would be cancelled effective Oct. 2 and that rates of exchange would be determined by conditions of supply and demand for foreign currencies, i.e., by market trading within the framework of exchange control. Subsequently the U.S. dollar fell to a level between \$1.04 and \$1.05 in terms of Canadian funds in early December 1950. After strengthening in the second quarter of 1951 it declined to between \$1.01 and \$1.04 in December 1951.

On Dec. 14, 1951 the Foreign Exchange Control Regulations were revoked by the Governor in Council and new Regulations were passed which exempted all persons and transactions from the various declaration and permit requirements of the Foreign Exchange Control Act, thus terminating exchange control in Canada. During 1952 the U.S. dollar declined gradually to an average of 96 cents in Canadian funds in September and then rose slightly to an average of 97 cents in December.

In 1953 the U.S. dollar strengthened during the first half of the year, averaging 99 cents in Canadian funds in June, then declined to an average of 97 cents in December. During 1954 the U.S. dollar averaged 97.3 cents, and in 1955 it averaged 98.6 cents, ending the year at slightly less than \$1.00.

* The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE**Section 1.—Loan and Trust Companies***

An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (R.S.C. 1952, cc. 170 and 272), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However summary statistics of provincial companies have been supplied by those companies since 1922 and summary figures for the years 1953 and 1954 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federally licensed companies.

The statistics of Tables 2 and 3 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies, beginning with 1925, are data of loan and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Federal Department of Insurance, as well as data for trust companies in New Brunswick since 1934 and in Manitoba since 1938.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,186,072 in 1923 to \$373,383,125 in 1954. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$636,891,519 in 1954. In the former year the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1954 to \$4,398,395,472.

* Revised under the direction of K. R. MacGregor, Superintendent of Insurance, Department of Insurance, Ottawa.

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures; total assets of such companies for the years 1953 and 1954 amounted to \$323,591,214 and \$373,383,125 respectively, which amounts include mortgage loans of \$237,620,270 and \$266,261,246 respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 73 p.c. and 71 p.c. respectively.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.—A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the Federal Department of Insurance. The data for federal trust companies cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (R.S.C. 1952, c. 251), an enactment of the Parliament of Canada regulating personal loans not in excess of \$500 made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month to licensed lenders and 12 p.c. per annum to unlicensed lenders. The small loans companies—four in number—were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Money-lenders, of which there are 61, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 5 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1951-54.

* Further details are given in the Department of Insurance report *Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1954.

The combined companies showed a substantial increase in business for 1954 as compared with the previous year. The number of small loans made to the public during the year increased from 770,449 to 831,721, or by 8 p.c., and the amount of such loans rose from \$174,503,555 to \$186,696,899, or by 7 p.c. The average small loan made was approximately \$224 in 1954 compared with \$227 in 1953. At the end of 1954 small loans outstanding numbered 523,628 for an amount of \$88,822,891 or an average of \$170 per loan and, for 1953, small loans outstanding numbered 482,966 for an amount of \$81,840,415 or an average of \$169 per loan.

Section 3.—Sales of Canadian Bonds*

Canadian borrowers, whether governments or corporations, sold through various forms of financing a total of \$4,468,983,364 in new bond issues during 1954. This was an alltime record, contrasting with a total of \$2,945,488,665 in 1953, \$2,028,228,140 in 1952 and \$1,650,211,237 in 1951. It was well over the wartime peak financing of \$3,934,975,794 in 1945.

For purposes of analysis the 1954 total of \$4,468,983,364 may be classified as follows: federal and guaranteed, \$3,200,540,900; provincial and guaranteed, \$400,916,000; municipal, \$260,993,664; corporation, \$606,532,800. Of the federal and guaranteed total at \$3,200,540,900, the amount of \$2,750,540,900 represented direct financing and \$450,000,000 represented guaranteed financing by the Federal Government. Of the direct financing \$1,950,000,000 represented the total of three federal issues (at \$850,000,000, \$400,000,000, and \$700,000,000 respectively) which were floated to meet refunding requirements. On the other hand an amount of \$800,540,900 represented new capital acquired by public subscription to Canada Savings Bonds, Series Nine. In the federal guaranteed category, an amount of \$450,000,000 represented two issues (at \$200,000,000 and \$250,000,000 respectively) of financing for the Canadian National Railways. Consequently all federal financing (excluding short-term issues of less than one year) totalled \$3,200,540,900 in 1954 compared with \$1,950,548,900 in 1953. This greatly increased financing largely contributed to the record total of all security issues placed during the year.

Excluded from the total of \$3,200,540,900 in federal financing are the short term issues of less than one year in the form of treasury bills, treasury notes, and deposit certificates. These amounted to \$3,780,000,000 and if included would bring the grand total of all federal borrowing in 1954 to \$6,980,540,900 and the grand total of all Canadian security financing to \$8,248,983,364. Comparable figures for 1953 were \$5,615,548,900 and \$6,610,488,665 respectively.

Although Canadian short term financing of less than one year dates back to the 1930's when Government of Canada treasury bills were first introduced, it did not become of particular interest outside the banking system until 1954. This development arose because increasing numbers of corporations turned to short term securities for the profitable employment of surplus funds not required for immediate business needs. An expanding market for treasury bills, in turn, enabled the Government of Canada to increase substantially the total of bills outstanding with important gains in terms of convenience and economy. As a result about 37 p.c. of the total bills outstanding were held outside the banking system by the end of 1954 compared with less than 5 p.c. at the end of 1953.

In contrast to upward trends in other security classifications provincial and guaranteed financing was down somewhat in 1954 from the totals shown in 1953. Total financing in this category amounted to \$400,916,000 of which \$226,032,000 represented direct financing and \$174,884,000 represented financing guaranteed by various provincial governments. These totals compared with \$258,500,000 direct provincial financing and \$178,116,900 guaranteed provincial financing in 1953.

* Prepared by E. C. Gould, Financial Editor, *The Monetary Times*.

Provinces which directly entered the 1954 bond market by month, were:—

<i>Province</i>	<i>Month</i>	<i>Amount</i>
		\$'000

Nova Scotia.....	November.....	12,000
Saskatchewan.....	December.....	10,000
TOTAL.....		226,032

Provincial guaranteed financing at \$174,884,000 consisted principally of flotations by The Hydro-Electric Power Commission of Ontario, the Quebec Hydro-Electric Power Commission, and municipal school financing guaranteed by the Province of British Columbia. The Province of Ontario guaranteed \$100,000,000 in two issues of \$50,000,000 each and the Province of Quebec guaranteed one issue at \$25,000,000. The very considerable number of school issues guaranteed by the Province of British Columbia totalled \$22,244,000.

Other sizable provincial guaranteed financing consisted of a \$12,000,000 issue of the Manitoba Hydro-Electric Board, a \$6,300,000 issue of the British Columbia Power Commission, and a \$4,500,000 issue of the Pacific Great Eastern Railway Company. A number of smaller flotations guaranteed by the Provinces of Newfoundland, Prince Edward Island and British Columbia for municipal and utility improvements made up the remainder of the provincial guaranteed total.

As distinct from provincial guaranteed municipal issues, direct municipal bond financing in 1954 totalled \$260,993,664, including \$51,352,886 for parochial and miscellaneous purposes. This was an increase over the 1953 total of \$222,027,065 which included \$35,242,605 for parochial and miscellaneous purposes. Consequently all municipal financing (without provincial guarantees) showed an increase of \$38,966,599 over the previous year.

The largest amount borrowed by any one municipality during 1954 was represented by two flotations of Metropolitan Toronto at \$30,235,000 and \$26,155,000. Other municipalities borrowing in excess of \$3,000,000 were: the City of Montreal, \$19,266,000; the Metropolitan Commission of Montreal, \$3,665,000; the Montreal Transportation Commission \$27,000,000; the City of Vancouver, \$6,462,000; the City of Jacques Cartier, \$6,525,000; and the City of Hamilton, \$4,498,903.

During 1954 corporate financing totalled \$606,532,800, an increase of \$270,237,000 over the \$336,295,800 total in 1953. The largest single issue (\$50,000,000) was syndicated for the Aluminum Company of Canada Limited and the largest amount borrowed by any one corporation (excluding guarantees for the CNR) was represented by two issues of the Canadian Pacific Railway totalling \$50,020,000. The first of these issues at \$25,020,000 was raised by the private sale of Equipment Trust Certificates in the United States and the second at \$25,000,000 represented collateral trust bonds offered on the Canadian market.

Other 1954 corporate borrowers of over \$10,000,000 were: British Columbia Electric Company Limited, \$15,000,000; Canadian Breweries Limited, \$15,000,000; The T. Eaton Acceptance Company Limited, \$20,000,000; Simpsons-Sears Limited, \$12,500,000; Inter-provincial Pipe Line Company, \$30,000,000; Steep Rock Mines Limited, \$17,000,000; General Motors Acceptance Corporation of Canada Limited, \$15,000,000; The Bell Telephone Company of Canada, \$40,000,000; Falconbridge Nickel Mines Limited,

\$30,000,000; Gunnar Mines Limited, \$19,500,000; British American Oil Company Limited, \$15,000,000; Canadian Industries (1954) Limited, \$25,000,000; and Dryden Paper Company Limited, \$10,500,000. The International Bank for Reconstruction and Development also took advantage of the strong bond market in 1954. Its issue for \$25,000,000 on the Canadian market was well received by investors.

A significant trend in the sale of corporate bonds during 1954 pertained to a greater offering of convertible securities as a means of raising additional equity capital. Practically all such issues met with a ready reception on the part of investors and many of them later sold at substantial premiums, reflecting the strength prevailing on stock markets at the time. An increased emphasis on the convertible feature constituted a strong factor which tended to narrow the differential between bond and stock yields during 1954.

In contrast to a general increase in new issues placed at home, Canadian bond sales in the United States declined considerably in 1954 from the previous year. This trend reflected a closer relationship between interest rates in the two countries and a larger prevailing discount for United States funds. Although \$306,599,215 of Canadian new issues were sold in the United States during 1953, only \$173,598,000 were sold during 1954.

A Directory of "Security Issues Placed During 1954" published in *The Monetary Times, Annual National Review 1955* shows that six federal issues (excluding all short term financing of less than one year), 37 provincial and guaranteed issues, 644 municipal issues (including parochial and miscellaneous) and 80 corporate issues were placed in 1954 as compared with two federal issues, 25 provincial and guaranteed issues, 589 municipal issues and 77 corporate issues in 1953. Thus 767 new issues of all classifications were sold in 1954 compared with 693 in 1953. Consequently the total increase of 74 represented a dollar increase of \$1,523,494,699, i.e., from \$2,945,488,665 in 1953 to \$4,468,983,364 in 1954. As already stated, much the greater dollar amount was the result of very considerable increases in relatively few issues of federal and guaranteed financing. In this one category the number of issues placed increased by only four while the total dollar amount increased by \$1,249,992,000. Excluding federal and guaranteed financing the 1954 increase of 70 issues over 1953 accounted for a corresponding dollar increase of \$273,502,699.

Subsection 2. Operational Statistics of Life Insurance Companies under Federal Registration.....	1140	SECTION 4. GOVERNMENT INSURANCE.....	1153

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. Special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXIX under the heading "Insurance".

Section 1.—Fire Insurance

In Canada fire insurance began with the establishment of agencies by British fire insurance companies. These, situated usually at the seaports, were operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given in the 1941 Year Book, pp. 846-847.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1954 shows that at that date there were 301 fire insurance companies under federal registration; of these 75 were Canadian, 89 were British and 137 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 75 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

* Material in this Chapter, except as otherwise indicated, has been revised under the direction of K. R. MacGregor, Superintendent of Insurance, Department of Insurance, Ottawa.

Subsection 1.—Total Registered Fire Insurance in Force in Canada

Of the total amount of fire insurance in force in Canada at the end of 1954, approximately 92 p.c. was accounted for by fire insurance companies under federal registration. The remainder was held by companies with provincial licences and permits, companies which generally confine their operations to the province of incorporation though they may be allowed to sell insurance in other provinces.

Subsection 2.—Operational Statistics of Fire Insurance Companies under Federal Registration

The trend in the average rate payable for fire insurance has been generally downward, although high fire losses in certain recent years have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums despite the downward trend of the average rate.

¹ Includes the Yukon and Northwest Territories, also certain 'float' business that cannot be apportioned to any one province.

Classification of Fire Risks.—The Department of Insurance compiles, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and claims by 21 classes of risks. The experience of 1952 and 1953 is given in Table 4.

4.—Percentage of Claims Incurred to Premiums Written in Canada by All Companies Operating under Federal Registration by Class of Risk 1952 and 1953

(Excluding all reinsurance ceded or assumed)

Class of Risk	1952	1953	Class of Risk	1952	1953

Subsection 3.—Finances of Fire Insurance Companies under Federal Registration

Tables 5 to 7 show the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada from 1950 to 1954. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Totals only are given here because it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted. Table 28, p. 1153, gives similar information for registered companies whose transactions are confined to casualty insurance.

Subsection 4.—Fire Losses

The information in Tables 8 to 11, which deals with the loss of property and life caused by fire, has been summarized from the *Statistical Bulletin* of the Association of Canadian Fire Marshals and the Dominion Fire Prevention Association prepared by the Dominion Fire Commissioner. Federal and other property losses not included in these figures amounted to \$7,804,914 in 1954 from 2,760 fires.

8.—Statistics of Fire Losses 1943-54

NOTE.—Figures for 1926-42 are given in the 1947 Year Book, p. 1078. Earlier figures from 1898 may be obtained from the Department of Insurance.

Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire	Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire
	No.	\$	\$	No.		No.	\$	\$	No.
1943.....	47,594	31,464,710	2.67	319	1949.....	54,500	65,159,044	4.94	542

¹ Excludes federal jurisdiction losses, including forests.

² Newfoundland included for 1950 only.

The provincial property losses for 1951-54 given in Table 9 include both insured and uninsured losses. The percentages of the provincial totals uninsured in 1954 were: Prince Edward Island 48; Nova Scotia 28; New Brunswick 29; Quebec 20; Ontario 13; Manitoba 17; Saskatchewan 13; Alberta 37; British Columbia 48; and the Yukon and Northwest Territories 22. Uninsured losses formed 22 p.c. of total losses for Canada.

Section 2.—Life Insurance*

Life insurance in force in Canada in companies registered by the Federal Government (exclusive of fraternal benefit societies) was over \$23,134,000,000 at the end of 1954, an increase of over \$1,907,000,000 during the year. The ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year, which had shown an advancing trend from 1951 to 1953, dropped in 1954 to the lowest level since the end of World War II.

Year	In Force at Beginning of Year	Increase in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6
1940.....	6,776,000,000	199,000,000	2.9

1953.....	19,091,000,000	2,136,000,000	11.2
1954 ^a	21,227,000,000	1,907,000,000	9.0

* All the amounts given in the tables of this Section are net amounts after deduction of reinsurance ceded.

Subsection 1.—Total Registered Life Insurance in Force in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Table 12 summarizes the volume of business transacted in Canada by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

Subsection 2.—Operational Statistics of Life Insurance Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has almost doubled since 1944—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. During 1954 life insurance business was transacted in Canada by 66 active companies having federal registration, including 31 Canadian, six British and 29 foreign companies. In addition there were seven British and three foreign companies which wrote no new insurance during the year, their business being confined to policies already on their books. One foreign company registered in 1954 had written no business in Canada.

The operations analysed in the tables of this Subsection, with the exception of Table 17, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licencees. However as indicated in Table 12 operations of the companies included account for 93.4 p.c. of the life insurance in force in Canada.

13.—Life Insurance in Force and Effected in Canada by Companies under Federal Registration, Decennially 1880-1940 and Annually 1941-54

NOTE.—Figures for 1889-1900 are given at p. 958 of the 1938 Year Book, and for 1901-39 at p. 855 of the 1942 edition. Statistics of fraternal society insurance, excluded here, are given at pp. 1145-1149.

Subsection 3.—Finances of Life Insurance Companies under Federal Registration

The financial statistics of Tables 18 and 19 cover only life insurance companies under federal registration and do not include fraternal organizations and provincial licencees. The figures for British and foreign companies apply to their assets, liabilities, and operations in Canada only but assets and liabilities, income and expenditure of Canadian companies arise in part from business abroad.

¹ A detailed classification of assets of Canadian companies will be found in the *Report of the Superintendent of Insurance, Vol. II.* ² At book values. The liabilities include a reserve equal to the amount, if any, by which the total book value of bonds, stocks and real estate exceeds the total market value (or amortized value where applicable). ³ Deferred premiums and considerations are included in these amounts for 1952 and 1953. For 1954 they were deducted from the actuarial reserve. ⁴ At market values.

19.—Total Revenue and Expenditure of Canadian Life Insurance Companies under Federal Registration and Revenue and Expenditure in Canada of British and Foreign Life Insurance Companies 1952-54.

NOTE.—In 1954 the method of presenting revenue and expenditure of Canadian life insurance companies was revised so that direct comparison with earlier years is not possible. The statement form shown in the table for 1954 will be used in subsequent years and comparable figures for the two previous years are given as far as possible.

recorded as expenditure.

² Excluding investment taxes and investment expenses which were formerly
³ Including items not previously recorded as expenditure.

Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 20 gives statistics of life insurance effected through fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The statistics of the first section of Table 20 relate to the 17 Canadian societies reporting to the Department of Insurance of the Federal Government, of which only one does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies 32 transacted business in Canada during 1954; two of the societies do not grant life insurance benefits.

**Subsection 5.—Life Insurance in Force Outside Canada by Registered
Canadian Companies**

Tables 21 and 22 give summary statistics of insurance in force as at Dec. 31, 1953 in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. Approximately 66 p.c. of all such business in force was written in United States currency and 19 p.c. in sterling. From another standpoint approximately 28 p.c. was written in currencies of Commonwealth countries outside Canada and 72 p.c. in currencies of foreign countries.

Canadian life insurance companies operating under Federal Government registration at Dec. 31, 1953 had life insurance in force amounting to \$6,554,085,400 in countries outside Canada. Insurance in force in currencies other than Canadian amounted to \$6,496,852,967 and the difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the Commonwealth and foreign investments of Canadian life insurance companies as at Dec. 31, 1953 amounted to \$1,983,476,418. As the business in force in Canada of these companies at Dec. 31, 1953 amounted to \$14,526,740,295, the total business on their books, Canadian and non-Canadian, amounted to \$21,080,825,695. Thus over 31 p.c. of the total business in force was outside Canada.

Subsection 6.—Total Registered Life Insurance in Canada and Business of Canadian Organizations Abroad

Table 23 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, p. 1139, total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of foreign organizations; this total is shown in Table 24.

23.—Business of Registered Canadian Life Companies and Fraternal Societies Abroad 1954^p

NOTE.—Figures for business in Canada will be found in Table 12, p. 1139.

Section 3.—Casualty Insurance

Casualty insurance in Canada includes various forms of accident and 24 other classes of insurance transacted by companies having Federal Government registration. In 1954 such insurance was issued by 322 companies, of which 80 were Canadian, 84 British and 158 foreign; of these, 231 companies also transacted fire insurance. In addition 21 fraternal orders or societies conducted accident and sickness insurance as well as life insurance business and three fraternal orders or societies carried on accident or sickness insurance only.

Table 27 shows the division of business in this field between Federal Government registrations and provincial licencees and indicates that the bulk of the business (about 90 p.c.) is transacted by companies having Federal Government registration.

Because as already stated most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditure are included in the financial statistics of fire insurance companies given in Section 1, Sub-section 3, of this Chapter. Table 28, p. 1153, gives corresponding figures for total casualty business of Canadian companies, and the casualty business in Canada of British and foreign companies whose transactions are confined to insurance other than fire and life. In 1954 there were 17 Canadian, 6 British and 68 foreign companies whose operations were limited to the same field.

A certificate of registration is not required for marine insurance and therefore operating results are not included in the following tables. They are as follows for the ten year period 1945-54:—

Year	Premiums	Claims Incurred	Under-writing Profits
	\$	\$	\$
1945.....	5,978,274	2,995,704	1,704,367
1946.....	5,655,392	2,232,701	2,084,412
1947.....	7,932,404	4,529,161	1,031,313

Section 4.—Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments.

Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Provincial Insurance Schemes.—Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act 1944, commenced business May 1, 1945; it deals in all lines of insurances other than sickness and life.

It administers the Automobile Accident Insurance Act which provides compensation for the victims of automobile accidents as well as property damage in such accidents. The Act provides Saskatchewan residents with personal injury coverage without regard to liability and in addition all Saskatchewan motorists enjoy public liability and comprehensive protection including fire, theft and collision coverages.

The Office, together with the Saskatchewan Department of Natural Resources, administers a trust fund made up of a portion of hunting licence fees and insurance premiums, to compensate farmers for damage done to their crops by certain forms of wildlife, chiefly ducks, geese and deer.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Public Relations Department of the Saskatchewan Government Insurance Office, 11th and Cornwall Streets, Regina, Sask.

Alberta.—Provincial Government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates firstly to the Alberta General Insurance Company in which the entire business of the fire branch of the Alberta Government Insurance Office

was vested by the Legislature on Mar. 31, 1948, and secondly to the Life Insurance Company of Alberta which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective Boards but the Charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the Province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act.

It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Information on insurance matters additional to that set out above may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The Minister of National Defence exercises control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under his direction the three Chiefs of Staff are responsible for the control and administration of their respective Services and the Chairman of the Defence Research Board is responsible for the Defence Scientific Service. A Chairman of the Chiefs of Staff Committee, appointed in 1951, is responsible to the Minister ensuring that all matters of joint defence and defence policy, in its widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administrative organization, headed by the Deputy Minister, is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister and four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for matters of administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary and where staff matters are concerned the Director of Public Relations.

A number of committees meet at regular intervals to consider and advise on joint issues. These include:—

- (1) **Defence Council.**—Composed of the Minister of National Defence (Chairman), the Associate Minister of National Defence (Vice-chairman), the Parliamentary Assistant to the Minister, the Deputy Minister, the Chairman of the Chiefs of

*Submitted by the Office of the Deputy Minister, Department of National Defence, Ottawa.

Staff Committee, the three Chiefs of Staff, the Chairman of the Defence Research Board and the Associate Deputy Minister; its purpose is to advise the Minister on administrative and other matters.

- (2) **Chiefs of Staff Committee.**—Composed of the Chairman of the Chiefs of Staff Committee, the three Chiefs of Staff and the Chairman of the Defence Research Board. The Deputy Minister of National Defence attends regularly and the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. The purpose of the Committee is to maintain a continuous review of all operational problems; sub-committees consider various aspects of these problems and report to the parent committee.
- (3) **Personnel Members Committee.**—Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Administration and Personnel), the Assistant Deputy Minister (Finance) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies; sub-committees consider various aspects of personnel problems and report to the parent committee.
- (4) **Principal Supply Officers Committee.**—Composed of the Chief of Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to consider all logistical problems; sub-committees consider various aspects of these problems and report to the parent committee.

Defence Supply Committee.—An inter-departmental committee composed of the Deputy Ministers of National Defence and of Defence Production and the senior military and civilian supply officers of the two departments maintains a continuous review of inter-departmental procurement and production problems and considers various policy aspects of the procurement of ammunition, armament, aircraft, etc. Eleven panels consider various aspects of these problems and report to the parent committee.

Liaison Abroad.—The Chairman of the Chiefs of Staff, the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains (1) Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board; (2) Canadian Joint Staff (London) representing the three Services and the Defence Research Board; (3) Canadian Military Mission, Far East; and (4) Service Attachés in various countries throughout the world. In addition a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence which is composed of representatives from the two countries.

Mutual Aid.—An analysis of Canada's Mutual Aid program expenditures are shown in the Chart on p. 144 and further details on Canada's contributions to NATO on pp. 144-145.

Rates of Pay and Allowances.—The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances are given in Table 1.

1.—Monthly Rates of Pay and Allowances for the Armed Forces, Effective Apr. 1, 1956

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Pro-gressive Pay				Group Pay for Tradesmen and Specialists				Subsistence Allowance		Marriage Allowance	Separated Family's Allowance (with Children)

Subsection 1.—The Royal Canadian Navy

Organization.—The Chief of Naval Staff at Naval Headquarters at Ottawa exercises central authority over the Royal Canadian Navy; Flag Officers at East and West Coasts exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands respectively. There are also 22 Naval Divisions throughout Canada that are established primarily for the recruiting and training of the Royal Canadian Navy (Reserve); they are administered by the Flag Officer, Naval Divisions with headquarters at Hamilton, Ont. Naval missions are maintained at London, England, and Washington, D.C., to maintain liaison with the Royal Navy and the United States Navy. As part of Canada's NATO commitment, officers of the Royal Canadian Navy are now serving on the staffs of the Supreme Allied Commander, Atlantic, and the Commander-in-Chief, Eastern and Western Atlantic Areas.

For the protection of shipping and the defence of Canadian coastal areas and harbours, the Royal Canadian Navy had 64 ships in commission during the year ended Mar. 31, 1954. In the event of war 38 of these are available for assignment to NATO for the defence of the Canada-United States area and for the protection of convoys under the control of the Supreme Allied Commander, Atlantic. Ships not earmarked for assignment to NATO are required for harbour defence, for training and for miscellaneous duties.

The strength of the Royal Canadian Navy on Aug. 31, 1955 was 2,646 officers and 16,534 men and women in the regular force and 1,701 officers and 3,818 men and women in the reserve force.

Operations at Sea 1954-55.—During the year ended Mar. 31, 1955 the Royal Canadian Navy reduced its contribution to the UN Naval Forces in Korean waters from three to one destroyer escort. After leaving the Far East in January 1955 HMC Ships *Huron* and *Iroquois* visited Ceylon, India and Pakistan on their return passage to Halifax.

In the course of normal training HMC Ships made many visits to Bermuda and American and West Indies ports. HMCS *Quebec* carried out cruises to Europe, South America and Africa and the first Escort Squadron, HMC Ships *Algonquin*, *Prestonian*, *Lauson* and *Toronto*, visited Mediterranean countries in the autumn of 1954. During the year, HMC Ships in addition to small training and tactical exercises took part in NATO exercises "New Broom 3" in the Western Atlantic Area and "Morning Mist" in the Eastern Atlantic Area.

The Arctic Patrol Vessel, HMCS *Labrador*, commissioned in June 1954, carried out survey and associated operations in the Arctic between July and September. It was the first warship to complete the Northwest Passage.

During the year 12 additional destroyer escorts, frigates, coastal escorts and minesweepers were commissioned. Also an agreement with the Royal Navy was implemented by which three RN submarines were lent to the RCN, based on Halifax, thus greatly increasing the facilities for anti-submarine training for both the RCN and RCAF.

Training Ashore.—HMCS *Stadacona* at Halifax, N.S., and HMCS *Naden* at Esquimalt, B.C., are the major shore establishments of the Royal Canadian Navy. Their facilities include schools for general and specialized training besides the drafting depots, hospitals and accommodation facilities necessary for the maintenance of the ships based on each coast. Formal courses in seamanship, gunnery, navigation direction, communications, diving, damage control and fire fighting, electricity and electronics, marine engineering, meteorology, medical assistant skills, and supply duties are provided in the schools and centres of these two establishments for officers and men of the regular and reserve forces. A third major shore establishment, HMCS *Shearwater* at Dartmouth, N.S., provides technical training for naval aviation.

During the year ended Mar. 31, 1955, 4,043 regular force new entries and re-entries received entry training at HMCS *Cornwallis*. A method of training new entry ordinary seamen has been devised which affords an economy of training time and intership and

establishments training. In order to standardize the professional knowledge of all lieutenants of the executive branch, 11 month technical and leadership courses for junior officers have been conducted since 1949. A Technical Apprenticeship Training program was introduced in August 1952 to assist in overcoming the shortage of skilled tradesmen. HMCS *Cape Breton*, a 10,000 ton maintenance vessel, was equipped and commissioned especially for this purpose.

As part of the naval aviation training program short service appointment midshipmen specializing in naval aviation undergo a 12 month basic course before starting flying training. The first six months are spent in HMCS *Cornwallis* and the second term is spent aboard a cruiser. Training of pilots, observers, air engineering and maintenance personnel, observers' mates and others connected with naval aviation is carried out at HMCS *Shearwater* with further training aboard HMCS *Magnificent*. HMCS *Stadacona* also provides additional instruction in some technical subjects. As part of the naval aviation program exercises are carried out in conjunction with the Royal Navy, the Royal Canadian Air Force and the United States Navy.

To meet the demand for officers for the expanding Navy a seven year short service scheme known as the "Venture Plan" was introduced in September 1954 and a new training establishment, HMCS *Venture*, was commissioned in Esquimalt, B.C. Also HMCS *Ontario* assumed the role of cadet training ship.

Junior officers of the engineering and executive branches on completion of their initial training in Canada proceed to the United Kingdom to take sub-lieutenant courses in gunnery, torpedo, anti-submarine, navigation direction and ship construction. Advanced training in certain highly technical fields and in staff duties is undertaken by selected officers in Canada, the United Kingdom and the United States.

At HMCS *d'Iberville*, where both the French and the English languages are used, the program is designed to give all French-speaking regular force new entries a basic knowledge of English together with preliminary training in seamanship and professional naval subjects. French-speaking new entries join the classes in HMCS *Cornwallis* at an appropriate stage in their training.

Ship Construction, Refitting and Modernization.—Work on the construction of 14 new destroyer escorts has continued steadily. The first vessel of the Class, HMCS *St. Laurent*, was commissioned on Oct. 29, 1955. The skills learned during the early part of the program are now beginning to show results. The first of 14 minesweepers was completed on Nov. 1, 1954 when HMCS *Fortune* was accepted. The keels of two of the six minesweepers being built to replace the six transferred to France as part of Canada's Mutual Aid program were laid by Oct. 1, 1955.

HMCS *Crescent* was completely modernized and converted at Esquimalt and was commissioned as an Algonquin Class Destroyer Escort. The program for the modernization and conversion of frigates progressed steadily and at the end of 1955 was 85 p.c. complete. The aircraft carrier, HMCS *Bonaventure*, was under construction at Belfast, Northern Ireland.

Royal Canadian Navy (Reserve).—Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*
 Corner Brook, Nfld., HMCS *Caribou*
 Charlottetown, P.E.I., HMCS *Queen Charlotte*
 Halifax, N.S., HMCS *Scotian*
 Saint John, N.B., HMCS *Brunswick*
 Quebec, Que., HMCS *Montcalm*
 Montreal, Que., HMCS *Donnacona*
 Toronto, Ont., HMCS *York*
 Ottawa, Ont., HMCS *Carleton*
 Kingston, Ont., HMCS *Cataraqui*
 Hamilton, Ont., HMCS *Star*

Windsor, Ont., HMCS *Hunter*
 London, Ont., HMCS *Prevost*
 Port Arthur, Ont., HMCS *Griffin*
 Winnipeg, Man., HMCS *Chippawa*
 Regina, Sask., HMCS *Queen*
 Saskatoon, Sask., HMCS *Unicorn*
 Calgary, Alta., HMCS *Tecumseh*
 Edmonton, Alta., HMCS *Nonsuch*
 Vancouver, B.C., HMCS *Discovery*
 Victoria, B.C., HMCS *Malahat*
 Prince Rupert, B.C., HMCS *Chatham*

Each division, commanded by a reserve officer, is responsible for specialized training in one of the various phases of naval activity—gunnery, harbour defence, aviation, communications, etc. Royal Canadian Navy officers and men assist with instruction. Twenty-two Naval Divisions are grouped in a Reserve Command headed by the Commanding Officer, Naval Divisions, at Hamilton, Ont. The Great Lakes Training Centre handled new entry reserve training in 1954; two gate vessels and two coastal escort ships, together with smaller craft, operated from Hamilton during this period. Great training value was also derived from the Fairmile motor launches attached to the Great Lakes divisions and from three small minesweepers operated by coastal divisions. During 1953-54 Naval Air reserve squadrons were formed at Toronto and Kingston, Ont., and at Victoria, B.C.

University Naval Training Division (UNTD).—The university naval training program is designed to give instruction to students in attendance at universities across Canada with the object of providing well trained junior officers for the Royal Canadian Navy and the Royal Canadian Navy (Reserve). Twenty-two UNTD's, drawing on students in 35 universities and colleges, have been established and had a total strength of 818 cadets at June 30, 1955. The total training period is three years and cadets are required to complete three winter training periods, two summer periods and certain specified courses. During 1954, 15 UNTD cadets were appointed to regular force commissions in the RCN and 113 obtained commissions in the RCN (Reserve).

The Royal Canadian Sea Cadets.—The Sea Cadets organization, as of June 30, 1954, consisted of 136 authorized corps sponsored by the Navy League of Canada and administered, trained and supervised by the Royal Canadian Navy. During the summer of 1955, 22 cadets trained in HMCS *Magnificent* on two separate cruises. Fourteen other cadets were embarked in HMCS *Iroquois* for a training cruise in June. A brass band of 28 cadets from RCSCC *Terra Nova*, St. John's, Nfld., spent the summer at the Great Lakes Training Centre, Hamilton, Ont. Approximately 280 officers and 3,220 sea cadets received training in RCN establishments and Royal Canadian Sea Cadet camps during the summer of 1955. The total strength (officers and cadets) of the Sea Cadet Corps on Aug. 31, 1955 was 9,978.

Subsection 2.—The Canadian Army

Organization.—Army Headquarters at Ottawa, organized as the General Staff Branch, the Adjutant-General Branch and the Quartermaster-General Branch, conducts the planning and policy for the administration and training of the regular and reserve forces of the Canadian Army. Public relations, cadet services, military intelligence, chaplain services, provost and associated activities are directed through Commands by Army Headquarters. The five Commands and seven Areas are located as follows:—

<u>Commands</u>	<u>Headquarters</u>	<u>Areas and Headquarters</u>
Eastern Command.....	Halifax, N.S.....	(1) New Brunswick Area, Fredericton, N.B. (2) Newfoundland Area, St. John's, Nfld.
Quebec Command.....	Montreal, Que.....	(3) Eastern Quebec Area, Quebec, Que.
Central Command.....	Oakville, Ont.....	(4) Eastern Ontario Area, Kingston, Ont. (5) Western Ontario Area, London, Ont.
Prairie Command	Winnipeg, Man.....	(6) Saskatchewan Area, Regina, Sask.
Western Command.....	Edmonton, Alta.....	(7) British Columbia Area, Vancouver, B.C.

The two main components of the Canadian Army are the Canadian Army Regular and the Reserves. The components of the Reserves are the Canadian Army Militia, the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps (COTC), the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges (*see* pp. 1167-1169), officially authorized cadet corps, rifle associations and clubs.

At the end of August 1955 there were 5,566 officers in the Canadian Army Regular and 41,879 men; the strength of the Canadian Army Militia was 7,280 officers and 38,509 men.

In 1953 the 1st Canadian Infantry Division was formed and, with the exception of a few units not required under present conditions, the Division has been activated. Divisional Headquarters and two-thirds of the Division are stationed and trained in Canada. The remaining third, one brigade group, is based in Germany. During the autumn of 1955 the 2nd Canadian Infantry Brigade Group took over from the 1st Canadian Infantry Brigade Group as Canada's NATO formation in Germany with headquarters in the area of the city of Soest, Westphalia. Canadian units in the base area and communications zone in Europe are administered by Headquarters, Canadian Base Units, Europe, located at Stockum, Germany.

Operations in 1955.—As with other Commonwealth countries Canada in September 1954 ordered a reduction in the size of its force in Korea and Japan. From the previous contribution of the 25th Canadian Infantry Brigade Group to the 1st Commonwealth Division, the force was reduced to about 200 officers and men serving as part of the Commonwealth Brigade in Korea and about 50 administrative troops in Japan. The largest group still serving in Korea at the end of 1955 were members of the 3rd Canadian Field Ambulance, RCAMC.

As a result of international agreements the Canadian Army provides the Department of External Affairs with personnel for truce supervisory duties in Indo-China. By September 1954 about 150 officers, non-commissioned officers and men were serving in Viet-Nam, Cambodia and Laos along with Indian and Polish representatives. During the late summer of 1955, after a one year tour of duty, a man-for-man replacement program was carried out.

In connection with Canada's military obligations under the North Atlantic Treaty, the 1st Canadian Infantry Brigade Group continued to serve in Germany until November 1955 when it was replaced by the 2nd Canadian Infantry Brigade Group. The Brigade's four new permanent camps in Western Germany are located near the centres of Soest, Werl, Hemer and Iserlohn. Canadian troops continued to participate in training exercises with other NATO forces.

During the summer of 1955 the 1st Canadian Infantry Division was given its first divisional training scheme in exercise "Rising Star" at Camp Gagetown, N.B. The exercise culminated six weeks of intensive sub-unit, unit and brigade training for about 10,000 members of the Regular Army.

As an important part of the defence of Canada the Mobile Striking Force, consisting of infantry and supporting units and an RCAF component, continued training preparations to deal effectively with possible small airborne invasions by an aggressor. The battalions forming the infantry element were: the 1st Battalions of the Royal Canadian Regiment, the Princess Patricia's Canadian Light Infantry, and the Royal 22nd Regiment. Two major exercises, "Bull Dog II" and "Bull Dog III", were carried out by units of the Mobile Striking Force during the winter of 1954-55. They were held in the sub-Arctic and provided experience in winter movement and tactics on a battalion scale. On its return from duty, infantry units of the 1st Canadian Infantry Brigade assumed the Mobile Striking Force role.

Equipment.—The Canadian Army Equipment Development Program continues to concentrate on those fields particularly suited to Canadian capabilities and in which there are special Canadian needs. Particular attention has been given to the problem of living and operating in the North under the most severe and adverse conditions. The development and evaluation of defence equipment for atomic, biological and chemical warfare

continued in close co-operation with the RCN, RCAF and Defence Research Board. The standardization program in the United States, United Kingdom and Canada and within NATO continues to promote the exchange of knowledge to the mutual advantage of the Armies concerned. Additional agreements were reached affecting procedures and equipment. Subsequent to the agreement between Belgium, Canada, France, the United Kingdom and the United States to adopt the 7.62 mm (.30-inch) calibre small arms round, the Canadian Army carried out tests and trials with various types of Fabrique Nationale (FN) rifles in an attempt to select the best rifle for use by the Canadian serviceman. On June 22, 1955 the Minister of National Defence announced that the rifle 7.62 mm C1 had been adopted as standard for use in the Canadian Army.

Training.—The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policy within their Commands, except for the training conducted at Army and Corps Schools, which are under the direct supervision of Army Headquarters.

The basic training of 9,206 recruits and the corps training of officers and men of the Canadian Army Regular was carried out at regimental depots, units, and corps schools. During 1954, 9,124 personnel attended courses at the schools of instruction.

Promotion qualification examinations consisting of written and practical tests were held to qualify Regular and Militia officers for the ranks of Captain and Major; 73 candidates passed qualification examinations for selection to attend the Canadian Army Staff College, and nine passed the entrance examination for the Royal Military College of Science. A training program was conducted during the winter months for all Regular officers to assist them in their professional knowledge. Militia Staff Course examinations were conducted for Militia officers to qualify Captains and Majors for Command and Staff appointments.

Qualifying courses for Junior NCO's were conducted under General Officers Commanding Commands. Senior NCO courses were conducted at corps schools in accordance with newly instituted training standards.

French/English language training which is available to all ranks of the Canadian Army was conducted by Commands and AHQ. The Canadian Army Training School conducted six month French-language courses for English-speaking officers and NCO instructors. A number of French-speaking potential NCO's received English-language training during the year.

Officers from the United States, the United Kingdom, Norway, France, Italy and Turkey attended courses at Canadian Army schools of instruction.

Trade and specialty training is given at corps schools and units. When feasible the facilities of civilian schools are used to supplement training at Army establishments. Trades training is conducted in accordance with the training standards for the appropriate trades. During 1955 several new trades were introduced in keeping with technical developments in the Army. New standards were set for instructional positions, resulting in an up-grading in the professional status and trade grouping of assistant instructors.

The apprentice training program, started in January 1953, is designed to train selected young men as soldier tradesmen and to provide them with a requisite academic background to enable them to advance to senior non-commissioned ranks in the Army. A high entry standard has been set to ensure that the prospective soldier apprentice will be capable of absorbing trade and academic training, and developing the leadership qualities essential in senior non-commissioned officers. During 1954 an additional 303 apprentices were enrolled and 39 civilian teachers were employed to provide academic instruction for about 700 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted. Apprentices are receiving trades training as clerks, cooks, carpenters, electricians, wireless operators, radar operators, radio mechanics, storemen, gun mechanics, vehicle mechanics and armourers. A balanced training program is designed to stimulate the interest of the apprentice. Military, trades, academic and recreational training are integrated. Separate messing, canteen and sleeping arrangements are provided for apprentices.

The training of the Mobile Striking Force continued throughout the year. The two important exercises conducted during the winter months of 1954-55 in the Fort Churchill area of northern Manitoba and at Yellowknife in the Northwest Territories (mentioned above) involved the dropping of Army parachute units to deal with simulated enemy lodgements. Other training for the Mobile Striking Force included parachute and air supply courses at the Canadian Joint Air Training Centre, Rivers, Man., and winter warfare courses at Wainwright, Alta., and Fort Churchill, Man.

Collective training for units in eastern Canada was conducted at Camp Gagetown, N.B., during the summer months and for units from western Canada at Camp Wainwright, Alta. All arms training was begun on the sub-unit and unit level, and culminated in exercises on the brigade level.

The Reserves.—An additional component of the Reserves, known as the Canadian Army Regular Reserve, conducts a training period of 60 days, authorized for the Canadian Army Militia in 1954-55, of which up to 15 days may be camp training as determined by General Officers Commanding Commands. In the summer of 1954 a total of 16,593 all ranks attended camp training. The aim of militia training continues to be to establish within each unit a nucleus of instructional and administrative personnel capable of training and organizing the unit in peace and conducting its expansion on mobilization.

The Regular Officer Training Plan (ROTP).—The Regular Officer Training Plan is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges which have contingents of the COTC. The purpose of the Plan is to train selected students for commissions in the Canadian Army Regular. Students enrol in the Canadian Army Regular with a special rate of pay; tuition and the essential fees are paid and grants are given for books and instruments needed for study. In the period Sept. 1, 1954 to Aug. 31, 1955, 63 of these sponsored students graduated and were commissioned in the Canadian Army Regular. Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian Officers' Training Corps (COTC).—In addition to the Regular Officer Training Plan, units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army Regular. Members of the COTC undertake the same training as members of the ROTP. In the period Sept. 1, 1954 to Aug. 31, 1955, 12 officers who had trained with the COTC were awarded commissions in the Canadian Army Regular.

Army Cadets.—The number of Royal Canadian Army Cadets trained during 1954-55 was 65,000, enrolled in 556 cadet corps. Training was conducted by 2,284 cadet instructors assisted by personnel from the Canadian Army Regular. During the summer of 1955 a total of 5,431 cadets attended trades and specialties training cadet camps situated at Aldershot, N.S., Farnham, Que., Camp Borden, Ont., Ipperwash, Ont., Dundurn, Sask., Vernon, B.C., and Vancouver, B.C. The cadets qualified as senior leaders and in such military trades as driver mechanical transport, infantry signaller and wireless and line-operator. In addition 504 cadets attended two-week camps at Clear Lake, Sask., and Sarcee, B.C. to qualify as junior leaders. The National Cadet Camp, held during the last two weeks of July and the first week of August 1955 at Banff, Alta., was attended by 235 carefully chosen first class and master cadets. The opportunity to attend this camp was an award for outstanding proficiency in cadet work. During the summer of 1955, 495 officers and civilian instructors of the Cadet Services of Canada attended courses at the various cadet camps.

Subsection 3.—The Royal Canadian Air Force

Organization.—Air Force Headquarters at Ottawa conducts the planning and policy for administration and training of the active and reserve forces of the RCAF. Organization is divided into three categories—personnel, logistics, and plans and operations. The major formations of the RCAF and their headquarters locations are as follows:—

<i>Formation</i>	<i>Headquarters</i>
Air Defence Command.....	St. Hubert, Que.
5 Air Division.....	Vancouver, B.C.
1 Air Division.....	Metz, France
Air Transport Command.....	Lachine, Que.
Air Material Command.....	Rockcliffe, Ont.
Maritime Air Command.....	Halifax, N.S.
Training Command.....	Trenton, Ont.
1 Tactical Air Command.....	Edmonton, Alta.
14 Training Group.....	Winnipeg, Man.

The organization of the RCAF's planned total of 41 squadrons was completed by the end of 1954 and the number of aircraft of all types in service was 2,845. Twenty-one of the squadrons are for the air defence of Canada, and twelve squadrons are stationed in France and Germany as No. 1 Air Division. Four squadrons are required for RCAF transport operations at home and abroad. Three maritime squadrons operate in conjunction with other forces for the defence of Canada's East and West Coasts. One squadron of Transport Command, No. 408, a photographic squadron, flew about 17,500 miles during 1954, carrying out aerial survey operations, including special aerial survey work in conjunction with the Mid-Canada early-warning radar system.

At the end of December 1954 the strength of the RCAF regular force was 8,886 officers and 39,864 men; strength of the auxiliary Air Force was 1,888 officers and 3,651 men.

Operations in 1954-55.—Air Defence Command continued its planned build-up. Work on the construction of the mid-Canada early-warning system was started. Improvements were made at all major airfields. Additional navigation aids were installed and all-weather instrument procedures developed for air defence operations. By the end of 1955 all nine regular squadrons of Air Defence Command were equipped with all-weather *CF-100* jet fighters.

The 1st Air Division is at maximum strength in Europe thus fulfilling Canada's commitment to the NATO integrated fighter force. Replacement of *Sabre II* aircraft with the more powerful Orenda-powered *Sabre V* was completed and the new *Sabre VI*'s began arriving.

The Joint Maritime Warfare School at HMCS *Stadacona*, Halifax, N.S., continued to train crews in basic and advanced anti-submarine tactics. Maritime Air Command aircrews took part in joint exercises with the RCN on both coasts and participated in a number of NATO exercises in Atlantic and European exercises. A new type of maritime aircraft, the *Neptune*, came into service.

The squadrons of Air Transport Command continued to provide air support to the Air Division in Europe and, until June 1954, to the Far East; long range air support operations were performed by *North Star* aircraft. The *Fairchild C-119* aircraft of the Command were used as cargo and personnel carriers in Canada, as well as for paratroop training. Both types of aircraft were used for supply operations to Arctic weather stations.

RCAF photographic squadron, No. 408 Squadron, completed camera coverage of additional areas under the air photography and survey program including 7,800 miles of special survey work in connection with the construction of the mid-Canada radar system.

During 1954 aircraft and marine distress missions, mercy flights and other emergencies involved the use of RCAF search and rescue aircraft on 230 occasions.

Training and Equipment.—During the fiscal year 1954-55 NATO aircrew training in Canada continued at a brisk pace. As of Dec. 31, 1954, 3,306 aircrew had been graduated under this plan since its inception in 1951. In addition the RCAF were engaged in training aircrew for their own requirements. Basic trades courses for non-flying-list officers produced 80 graduates and basic trade schools graduated 7,830 tradesmen during 1954-55.

Officers and flight cadets entering the Service received officer development training at the Officers School, London, Ont., and airmen received initial service training at No. 2 Manning Depot, St. Johns, Que. Basic flying training was conducted at flying training schools located at Centralia, Ont., Claresholm, Alta., Moose Jaw, Sask., and Penhold, Alta. Advanced flying training on twin engine aircraft was given at Saskatoon, Sask., and single engine aircraft advanced flying training at Portage la Prairie, Man.; in the autumn of 1953 the latter station began to give advanced flying training on jet aircraft. Another advanced flying school for jet aircraft is located at Gimli, Man. A Pilot Weapons School is conducted at MacDonald, Man.; flying instructor courses are given at the Flying Instructors School at Trenton, Ont.; instrument rating courses are conducted at Centralia and North Bay, Ont., and at Saskatoon, Sask., and pilot attack instructor courses are given at MacDonald, Man. In 1954 the training of radio officers and navigators was integrated to provide a common basic course in navigation and electronics at the Navigation and Radio School at Winnipeg, Man.

Formal trade courses for newly commissioned non-flying-list officers were conducted at RCAF schools in aeronautical engineering, armament supply, telecommunications and security. Basic courses for unit defence officers were conducted at Camp Borden, Ont. Courses were provided to qualify officers in flying control. *CF-100, Sabre, Silver Star* and *C-119* mobile ground training units were used with great success during the year. Trade advancement training program continued at all units, both regular and auxiliary. To help tradesmen advance more rapidly into the qualified trade group levels, quarterly written trade test boards were continued. Language training programs were conducted where necessary.

The aircraft procurement program during 1955 is dealt with under Defence Production at pp. 1170-1171.

RCAF Reserve.—The sub-components of the RCAF reserves are designated as: (1) the Auxiliary; (2) the Primary Reserve; and (3) the Supplementary Reserve.

During the year ended Mar. 31, 1955 officer development courses were conducted at the Reserve Officers School, Royal Military College, Kingston, Ont., for university flight cadets of the Primary Reserve participating in their first summer training program. Pilot trainees of the Auxiliary, members of reserve university squadrons and Services Colleges flight cadets received flying training during the year. Potential radio officers from the reserve Air Force, reserve university squadrons and Canadian Services Colleges flight cadets were trained at Clinton, Ont.

At the Reserve Officers School at Kingston, initial training for the non-flying-list primary reserve flight cadets of Canadian Services Colleges and universities, who were participating in their first summer program, was followed by basic courses in aeronautical engineering, supply, telecommunications, armament and flying control as applicable. Second year cadets were commissioned after successfully completing the final phases of their basic courses. Language and technical training at RCAF Training Command Schools was also given for instruction duties in the RCAF Auxiliary. The reserve tradesman training plan, instituted in 1952, was continued and approximately 1,855 recruits, both high school students and air cadets, completed training during 1954. Reserve tradesmen are entitled to take regular force training courses but few are able to do so because of their civilian occupations.

Ten auxiliary squadrons are maintained in Canada to provide fighter aircraft for interception duties. In addition two auxiliary squadrons are equipped with Mitchell light bombers and operate, as required, with Canada's Mobile Striking Force.

Royal Canadian Air Cadets.—The Royal Canadian Air Cadets are closely associated with the RCAF. Under the sponsorship of the Air Cadet League of Canada, the air cadet movement continued to expand. As of Sept. 1, 1955 air cadet strength stood at over 19,000 in 274 squadrons. During the summer of 1955 camps for air cadets were held at RCAF Stations at Greenwood, N.S., Clinton, Ont., and Abbotsford, B.C. More than 4,000 cadets, cadet officers and instructors attended camp. A precision drill team of 40 cadets selected from the Senior Leaders course to represent Canada in the International Drill competition held at the Canadian National Exhibition at Toronto in 1955 won the competition and the Beau International Challenge Trophy for Canada for the fifth time.

The international exchange visits program, sponsored jointly by the RCAF and the Air Cadet League, was again very successful in 1954 and 1955. Cadets were exchanged with the United Kingdom, the United States, Denmark, the Netherlands, Norway and Sweden.

Two hundred and fifty senior air cadets receive flying training annually through scholarships awarded by the RCAF. Since the inception of flying scholarships in 1946 more than 2,000 cadets have learned to fly by this means. Under the Reserve Tradesmen Training Plan air cadets receive trades training in a nine-week summer course in addition to preparatory training at their respective squadrons during the school year.

Subsection 4.—The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947 by an amendment to the National Defence Act.

The Board consists of a full time chairman and vice-chairman, six ex-officio members and seven other appointed members. The ex-officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence, the President of the National Research Council and a representative of the Department of Defence Production. The remaining members, appointed by the Governor in Council for three year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of Headquarters staff, twelve field research stations and liaison officers at London, England, and Washington, U.S.A., and is known collectively as the Defence Scientific Service. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Defence Scientific Service by their consideration of a variety of problems.

In planning this organization the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level the Chairman of the Board has the status of a Chief of Staff, and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus the Defence Research Board has been described as a fourth service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large.

The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields which have little or no civilian interest.

From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but nonetheless valuable benefits of Canadian research.

During 1955 the Defence Research Board conducted research activities in naval, armament, telecommunications, arctic, medical, operational, materials, aeronautical and special weapons problems. Research on naval problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Both stations are engaged in the study of anti-submarine devices, since anti-submarine warfare will be the prime task of the RCN in time of war. Research and

development of weapons for the Armed Services is carried out at the Canadian Armament Research and Development Establishment at Valcartier, Que. This is the largest research establishment operated by the Board and has facilities for the study of all phases of armament development. The Board operates two laboratories whose prime interest is in the field of electronics. The Radio Physics Laboratory at Shirley's Bay, Ont., is interested mainly in fundamental research associated with radio communications, particularly in northern latitudes. The Electronics Laboratory, situated within the grounds of the National Research Council's Montreal Road Laboratories, is concerned primarily with the development of electronic devices as aids to navigation. The centre for research into arctic and sub-arctic conditions is the Defence Research Northern Laboratory at Fort Churchill, Man., which is mainly occupied with the application of the results of fundamental research into the effects of cold weather on men and materials.

Medical research is conducted in Canadian universities and medical schools, as practicable, and at the Defence Research Medical Laboratories at Downsview, Ont. (near Toronto). The major emphasis is in the field of aviation medicine, but investigations include such problems as blood substitutes, infection and immunity, burns and wounds, nutrition and other factors likely to hinder a military man's ability to perform his duties effectively. Operational research, which may be defined as the application of techniques of scientific research to problems which arise in the Armed Services in the execution of their operational roles, is conducted by the Operational Research Group consisting of a headquarters section and three research sections; in addition there are three operational research organizations in the Armed Forces, staffed largely by personnel from the Defence Scientific Service. The Board continued to support active programs of research into methods of estimating, recovering and fabricating such useful metals as titanium, etc. The titanium program is a series of integrated research projects conducted by the Mines Branch of the Department of Mines and Technical Surveys and the Universities of Toronto, Laval and Montreal, in co-operation with various industrial firms with long experience in this field. In addition to aeronautical research conducted by the National Aeronautical Establishment, the Defence Research Board supports an extensive program on aeronautical and gas dynamics problems at various Canadian universities. Special weapons research is conducted in the atomic, biological and chemical fields at the Defence Research Chemical Laboratories, Shirley's Bay, Ont., the Suffield Experimental Station, Ralston, Alta., the Defence Research Kingston Laboratories at Barriefield, Ont., and at a Department of Agriculture Isolation Station located on Grosse Ile near Quebec City.

Pursuing its established policy, the Defence Scientific Service continues to make available to the scientific community at large all results of its work other than those of purely military importance.

Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training Colleges

Canadian Services Colleges.—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers and Collège Militaire Royal de Saint-Jean established at St. Johns, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as the Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal, scientific and military education; the organization and training give cadets the opportunity to command and to exercise judgment.,

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the college course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the general or engineering courses. For cadets entering Collège Militaire Royal, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and complete the final two years at the Royal Military College.

The College year is eleven months, divided into three terms: autumn, winter and summer. The months September to April are devoted to academic training supplemented by such military studies as drill and physical training. The summer term, May to mid-August, is spent in practical training at an establishment of the Service in which the cadet is enrolled. Academic requirements for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at Collège Militaire Royal. For admission to the preparatory year at that institution the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth year standing.

To be accepted a candidate must be single, a Canadian citizen or British subject normally resident in Canada and physically fit in accordance with the medical standards of the Service in which he enrolls. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interview and medical examination of candidates is carried out by tri-Service boards located at six regional centres across Canada. Three officers representing the Services and a representative of the Services Colleges sit on each interview board. Fifty per cent of the cadets entering the first year at the Services Colleges are selected on the basis of provincial quotas as determined by population and the remainder are selected in open competition. The interview boards base their recommendations on the physical and personal qualifications of the candidates, with responsibility for final selection resting with a board appointed by the Minister of National Defence.

Since September 1954 virtually all cadets entering the Services Colleges have been required to enrol under the Regular Officer Training Plan. Under this plan applicants accepted for entry enrol, according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. All costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence, and cadets are paid at the rate of \$55 a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the regular force but may, if they so wish, apply for release after three years service following completion of academic training.

The only cadets now accepted at the Services Colleges in a reserve capacity are those who qualify for Dominion Cadetships, which are awarded by the Government in recognition of sacrifice or long service of a candidate's father. A maximum of 15 Cadetships may be awarded in any one year, five in each Service. Valued at \$580, a Cadetship covers first year fees.

During the 1954-55 academic year 834 cadets were in attendance at the Canadian Services Colleges; 401 of them attended Royal Military College, 153 Royal Roads and 280 Collège Militaire Royal de Saint-Jean. Of the total, 181 were enrolled in the Navy, 358 in the Army and 295 in the Air Force.

Staff Training Colleges.—The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments in field formations and commands. The course extends from January to November. Though most of the student body is comprised of

Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. Canadian Army officers must pass a searching entrance examination before being considered eligible for staff training. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, indoor and outdoor exercises. Most of the work is carried on in syndicates, each under a member of the directing staff. Attention is paid to both individual and team work. Aside from purely military subjects such as the study of modern tactics, the curriculum includes world affairs and lectures by prominent guest speakers.

The National Defence College at Kingston, Ont., opened on Jan. 5, 1948, is a senior defence college providing an eleven month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and Government Departments attend as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries. In addition educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East are made to give students more knowledge of conditions and influences in their own and other countries. The ninth course, from September 1955 to July 1956, was attended by 29 students, three from the Royal Canadian Navy, four each from the Canadian Army and the Royal Canadian Air Force, one from the Defence Research Board, two from the Department of External Affairs, one each from the Department of National Defence, the Department of Trade and Commerce, the Department of Transport (Air), the Royal Canadian Mounted Police, the Canadian Broadcasting Corporation, the Bell Telephone Company of Canada and the Canadian Pacific Railway. Representation from outside Canada included one member each from the Royal Navy, the Royal Air Force, the British Army, the Foreign Office of the United Kingdom, the United States Navy, the United States Air Force, the United States Army and the State Department of the United States.

The Royal Canadian Air Force Staff College at Armour Heights in Toronto, Ont., is a permanent establishment preparing officers for staff appointments in the Air Force. The course affords advance service education for officers normally of Wing Commander and Squadron Leader ranks, fitting them for appointments appropriate to their present ranks and preparing them to assume higher appointments. The Directing Staff selected from the Royal Canadian Air Force is augmented by an exchange officer from the Canadian Army and one from the Royal Air Force. The student body in addition to Royal Canadian Air Force officers has one or two representatives each from the Royal Canadian Navy, the Canadian Army, the Royal Air Force and the United States Air Force. The objective of the course is to assist the student to think logically and express his ideas with precision both orally and in writing, to know his Service and understand the employment of air forces, to keep abreast of scientific and technical development that may affect the employment of air forces and to gain a perspective of national and international problems. Lecturers are drawn when desirable from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments at home and abroad.

PART II.—DEFENCE PRODUCTION*

Canada embarked on a program of defence preparedness after the outbreak of hostilities in Korea in 1950 in order to rebuild the level of her Armed Forces and to furnish them with the latest types of equipment. As a result the Department of Defence Production was established on Apr. 1, 1951 under the provisions of the Defence Production Act (R.S.C. 1952, c. 62) to procure the goods and services required by the Department of National Defence and to ensure that the necessary production capacity and materials would be available to support the defence production program. The Department also buys material for the civil defence program and serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of

* Prepared by the Economics and Statistics Branch, Department of Defence Production, Ottawa.

defence goods required by other governments and of supplies needed to meet Canadian commitments under the Colombo Plan and other international agreements. The original legislation provided for a temporary department with an expected life of five years, but an amendment to the Defence Production Act in 1955 placed the operations of the Department on a continuing basis similar to that of other government departments.

About 62 p.c. of Canada's total defence expenditures since 1951 have been against orders placed by the Department of Defence Production and by Defence Construction (1951) Limited, a Crown company responsible for defence construction activities. By the end of 1955 the total defence orders placed on behalf of the Department of National Defence amounted to about \$5,400,000,000. The aircraft program (including miscellaneous government-furnished aircraft equipment) accounted for about 38 p.c. of this amount, by far the largest portion. Next in value was the construction program with 12 p.c., followed by electronics and communication equipment with 8.5 p.c. and ships with 7 p.c. (See Table I, p. 1173.)

During 1955 procurement and construction for Canada's defence program continued at a high level, with expenditures just over 3 p.c. below the value for 1954. This stability is attributable largely to the volume of work on programs launched in previous years which offset an appreciable drop in the value of new orders. In general the level of activity remained stable in all branches of the program.

Aircraft.—The major elements in the aircraft program during 1955 continued to be jet fighter production and development. Production continued on both the Canadian-designed *CF-100* (Canuck) all-weather interceptor and the *Sabre VI (F-86)* fighter but rate of output was reduced in conformity with the requirements of the Royal Canadian Air Force. Further development of the *CF-100* was undertaken during the year to obtain more powerful armament, greater altitude and improved manoeuvrability. Production of Series 11 and 14 Orenda jet engines for both the *Sabre* and *CF-100* aircraft also continued but at a reduced rate reflecting the reduction in aircraft output. Tooling and pre-production contracts were placed for a new Canadian-designed supersonic all-weather jet fighter, the *CF-105*, which will eventually replace the *CF-100*. A contract was concluded for the development and manufacture of prototype models of the PS-13 turbo-jet engine which will be installed in the *CF-105*. However the first *CF-105*'s to be produced will be fitted with United States J-75 jet engines.

Production of the *Silver Star* jet trainer (*T-33 AN*) powered by the Nene engine continued at a minimum rate throughout the year. An additional sustaining order for this aircraft was placed to permit production at a low rate for replacement of operational losses. The contract for the Nene engines was completed with the delivery of the last of the 50 engines produced in Canada. The *T-34* trainer program was completed in July 1955 with deliveries being made to both the Royal Canadian Air Force and the United States Air Force. Most of the labour force engaged on this program was absorbed into the production program for *Grumman CS2F* carrier based aircraft for the Royal Canadian Navy. The build-up of manufacturing facilities continued for production of the R-1820-82 engines for installation in the *CS2F*. Arrangements were completed for the entire assembly in Canada of the Hamilton Standard 43D51 propeller for the *CS2F*, and for the manufacture of certain components of this propeller.

Development and preparation for manufacture of the maritime reconnaissance *CL-28* aircraft proceeded satisfactorily in 1955 with the design of the aircraft nearing completion and much of the tooling being manufactured. In the helicopter field, purchases of *Sikorsky S-55*, *HO4S-3* and *S-58*, as well as *Piasecki H-21* helicopters were made for the Royal Canadian Navy and the Royal Canadian Air Force. The *S-55*'s were fitted with Canadian manufactured R-1340 engines.

Canadian facilities set up for the purpose of manufacturing flight instruments, remote-control gyro-compass systems, pressure indicators, transmitters, etc., were maintained, although at a reduced level in line with the cutback in production rates of aircraft. Development contracts covered such items as the R Theta automatic navigation position and homing indicator, a single-stage version of the R Theta, Ball integrators for computing navigation data, and an advanced version of the Ferranti artificial horizon. All repair

and overhaul work proceeded as expected, and phasing out of older types of aircraft and engines offset additional arisings of later models. Facilities now exist in Canada for the repair and overhaul of all aircraft, engines and related equipment currently in use by the Department of National Defence.

The development of the air-to-air guided missile "Velvet Glove" continued during 1955 and further limited production for service trials by the RCAF was undertaken. This was Canada's first missile program and it demanded the co-ordinated efforts of a number of production specialists within the Government and throughout industry. As a result of the Velvet Glove program valuable experience has been gained by the Government, its contractors and by Service evaluation teams. Although the Velvet Glove may be superseded by another air-to-air guided missile the benefits gained from this program will facilitate the development of production in Canada of new types of missiles.

Electronics.—The procurement and production of electronic equipment for the Canadian Armed Forces and for Allied countries continued at a high level in 1955. Considerable planning was undertaken of those electronic items involving special military specifications or requiring special production facilities. The development of an ultra high frequency (UHF) airborne radio set proceeded satisfactorily, and orders were placed for an airborne transmitter-receiver and direction finding equipment. Production of the one mile radio set and the radio navigational compass was completed and production of a new five mile radio set started. Fixed airborne and shipboard radars were produced throughout the year and new contracts were placed for airborne equipment and large ground radars as well as for the production of radar counter-mortar equipment. The anti-submarine detection program was further advanced with the placing of orders for sonar and harbour defence equipment. Contracts were also placed for the production and conversion of flight simulators and the production of proximity fuses continued throughout the year.

A large program was undertaken to provide spares and maintenance for the Pinetree radar system. Also, many of the major orders for equipment for the mid-Canada early-warning line were placed during 1955 and active expediting was undertaken. An installation program was drawn up and discussed with major contractors. In accordance with the Canadian-United States agreement covering the Distant Early Warning (DEW) line which is being financed by the United States Government, assistance was given to the management contractor in procuring equipment and services in Canada for this project. Substantial contracts have been awarded to Canadian companies for construction work, steel towers and airlift services.

Shipbuilding.—The keels of five of six MCB-class coastal minesweepers were laid in 1955. These ships are an advanced version of the Canadian-designed AMC-class minesweepers which were completed in 1954 and are designed to cope with the latest known developments in mines. The last three of the first program of 16 World War II frigate conversions were completed during the year; these ships are completely new except for propulsion and auxiliary machinery and the bare hull up to deck level. Work continued on the second program of five ships to undergo similar conversion, the demolition work being complete and reconstruction well advanced at the end of 1955.

The lead ship of the first group of seven destroyer escorts, HMCS *St. Laurent*, successfully underwent sea trials and was commissioned on Oct. 29, 1955. The hulls of the other six vessels were launched in preparation for the fitting of propulsion machinery and auxiliaries. Three hulls of the second group of seven destroyer escorts were launched. A total of 35 auxiliary craft and 57 small boats were under construction during the year; eleven of the auxiliary craft were completed and all but ten of the small boats.

Construction progressed rapidly in Northern Ireland on the light fleet carrier HMCS *Bonaventure*, and fitting-out advanced well during the year. Delivery of the Mark 30 and Mark 32 torpedoes was completed in 1955, although some ancillary items had not been completely shipped by the end of the year. Orders were placed for a quantity of Mark 43 torpedoes for delivery to the RCN and the RCAF. The refit and overhaul of ships, performed mainly in East Coast and West Coast shipyards, increased during the year with more naval vessels in operation. The longterm degaussing program to provide all Canadian ships with anti-magnetic equipment was virtually completed.

Weapons and Ammunition.—Deliveries were completed in 1955 on one of two types of anti-submarine mortars ordered for the Royal Canadian Navy, and on the medium mortars for the Canadian Army. Deliveries were made on howitzers and light mortars for the Canadian Army, on the second submarine mortar for the RCN and on the conversion of machine guns for the RCAF. Production of the new rocket launcher for the Canadian Army was well advanced by the end of the year. The Department of National Defence announced in June 1955 that the new 7.62mm C-1 rifle was being adopted by the Canadian Army, and an order was subsequently placed for the first quantity from Canadian production. Good progress was made on development contracts for the adaption of other small arms to the new cartridge, the design of torpedo tubes and the improvement of existing weapons. In addition to work on the weapons themselves, a number of projects were devoted to the study of sighting, fire control and other ancillary equipment.

Production of complete rounds of ammunition increased both in volume and in variety during 1955, although delivery schedules were adjusted early in the year to stretch out some existing orders. The main items of production included .30, .50, and 20mm small arms ammunition, 40mm, 60mm, 81mm, 90mm, 105mm, 155mm, and 3"50 cal. artillery and mortar ammunition, anti-tank and air-to-air rockets, depth charges, flares, signals, explosives and chemicals. New items reaching volume production included Heller anti-tank rockets, smoke shells, mortar training ammunition, a new type of anti-submarine projectile and 17 pdr. ammunition. A number of new types of ammunition, of both Canadian and foreign design, underwent either design development or pre-production trials, and progress was made in the build-up of component production on other new items.

General Purchasing.—The principal objects of the general purchasing program are the clothing, equipping, feeding, maintaining and servicing of the Canadian Armed Forces, and the purchase of certain supplies for the Defence Research Board and the Inspection Services of the Department of National Defence. During 1955 these general purchases of supplies and services not normally requiring special production facilities included such items as: textiles and all types of clothing; footwear and leather goods; military patterns, standard and special commercial vehicles together with replacement parts; the repair and reconditioning of all types of Service vehicles; food and catering services; furniture and furnishings; petroleum products and hard fuels; medical and dental supplies; research and development projects; building supplies; and all types of barrack stores.

Major orders placed during 1955 included electric generating sets for *CF-100* and *F-86* fighter aircraft, electric distribution transformers for Camp Gagetown, N.B., prototypes and drawings for steel shipping cases for aero engines, shipboard cable for the destroyer escort program and for normal maintenance needs, and motor generating sets for the conversion of World War II frigates from direct to alternating current. Standard packaging methods were developed and a re-packaging program undertaken to obtain more efficient use of space in the Department's cloth warehouse by eliminating wide variations in the packing of fabrics.

There was an increase in 1955 in the number of orders placed by the district purchasing offices in Canada to meet the needs of units of the Canadian Armed Forces stationed in the corresponding areas. These local purchases are generally small in value but involve the letting of a very large number of contracts to meet local and urgent needs, mainly for food, hardware, electrical and building supplies, barrack stores and many types of services.

Orders and Expenditures.—In 1954 the value of new orders and amendments exceeded the value of expenditures but in 1955 expenditures were more than one-third greater than net defence orders. In the earlier year, the net value of orders placed was particularly high as a result of large longterm contracts for increased numbers of *CF-100* and *F-86* jet fighter aircraft and for engineering, tooling and production of the *CL-28* maritime reconnaissance aircraft, and the 1955 figure of \$726,000,000 was about 40 p.c. lower. The largest decline in 1955 was the almost \$500,000,000 decrease that occurred in the aircraft program; orders for aircraft and related equipment accounted for only 23 p.c. of the total value of orders compared with 54 p.c. in 1954. Other important declines took place in the tank-automotive and ammunition and explosives programs. On the other

hand the value of orders increased noticeably in the construction, shipbuilding and weapons programs. Construction was affected by increased activity at Camp Gagetown and by work on the mid-Canada early-warning radar line. Increasing financial commitments in connection with the construction of destroyer escorts contributed to the rise in the net value of orders placed under the shipbuilding program; the large contract with Canadian Arsenals Limited for tooling and production of the new standardized 7.62mm C-1 rifle was an important factor in raising the level of orders under the weapons program.

The relatively small decline in expenditures to \$975,000,000 from \$1,000,000,000 in 1954 reflected defence production activity on orders placed before 1955. Declining expenditures occurred in most of the major programs, the exceptions being construction, electronics and communication equipment, and ammunition and explosives. With more military equipment in operation and increased fuel requirements associated with the mid-Canada line, expenditures on fuels and lubricants rose in 1955. There was no significant change however in the relative share of total expenditures attributable to each program. The outlay on the aircraft program continued to represent approximately two-fifths of the total.

Over the past few years, the ability of Canadian industry to produce a greater variety of defence items has made it possible to place a larger proportion of defence orders within the country. In 1955 only 4 p.c. of the net value of orders issued was placed outside of Canada, whereas in 1954 about 11 p.c. was placed abroad. Orders placed abroad were for items which could not be produced economically in Canada within the limits of current and anticipated defence requirements.

1.—Net Value of Canadian Government Defence Orders by Program 1954 and 1955 with Cumulative Totals from 1951

NOTE.—Includes construction contracts placed by Defence Construction (1951) Limited.

Program	1954	1955	Total Apr. 1, 1951- Dec. 31, 1955

Industry and Defence.—The Minister of Defence Production is responsible for organizing and mobilizing the resources of Canada, including the co-ordination of economic and industrial facilities, in order to meet the current and prospective needs of defence. The general economic background against which the defence production program is carried out must be taken into account as the strength of the defence production base depends, to a large extent, on the general condition of the national economy. The equipment demands of the Armed Forces affect virtually all sectors of industry in varying degree and the rate of innovation in modern defence equipment is such that a broad and responsive industrial base is essential. The striking economic advance achieved in 1955 indicates the ability of the Canadian economy to meet future defence needs.

During 1955 developments continued in most sectors of defence industry which insured facilities and skills needed to meet the new requirements of the Armed Forces and which reduced the degree of dependence on foreign sources for strategically important equipment and components. Production development advanced in connection with the *CF-105* supersonic interceptor, the *PS-13* jet engine and the *CL-28* maritime reconnaissance aircraft programs. The broadening of Canadian ammunition capacity was continued, particularly in the fields of propellants and steel cartridge case manufacture. Surveys of probable electronic requirements were undertaken in order to assist industry in calculating the practicability of establishing facilities for the production of certain strategic components, and Canadian facilities for the manufacture of klystron and magnetrons were created in 1955. Major electronic developments on which progress continued to be made included the airborne guided missile program, a complex electronic simulator for use in naval tactical training, sonar domes for anti-submarine protection, and various types of data processing devices. A large part of the preparatory work was completed for the production of the new 7.62mm rifle.

During 1955 manufacturers were encouraged to invest their own capital in the production facilities needed for these new developments, this encouragement often taking the form of protection in the event of early termination of contracts, or of additional capital cost allowances for income tax purposes (accelerated depreciation) on capital expenditures incurred by contractors for the purpose of carrying out defence work. A number of important Crown assets were sold to the management companies but in all such sales a condition was attached requiring that the facilities be available for a minimum period of ten years to meet any defence production requirements that may arise. New investment of public funds in the form of capital assistance was lower in 1955 than during 1954 and, with the exception of capital investment in Canadian Arsenals Limited plants, was mainly for those highly specialized types of equipment for which limited requirements precluded the recovery of capital cost. Capital assistance projects approved in 1955 amounted to only \$1,800,000, slightly less than one-half the total approved in 1954.

3.—Net Value of Capital Assistance Projects Approved by the Department of Defence Production 1954 and 1955 with Cumulative Totals from 1951

Program	1954	1955	Total Apr. 1, 1951- Dec. 31, 1955
	\$'000	\$'000	\$'000
Aircraft.....	512	405	103,296
Ships.....	132	19	18,806
Weapons.....	14	1,262	10,823
Ammunition and explosives.....	46	—	24,836
Electronics and communication equipment.....	415	66	3,339
Other.....	2,650	62	15,817
Totals.....	3,769	1,814	176,917

Throughout 1955 attention continued to be given to the maintenance of defence production capacity, as a guarantee of future availability, for those defence supplies for which initial requirements had been met. The Department has, where possible, encouraged contractors to develop commercial work to which defence production facilities may be readily converted. Where the timing of Service requirements permits, facilities have been maintained in operation by stabilizing production over an extended period at lower rates of output. Adjustments of this type were made in 1955 in the aircraft program, in line with the requirements of the RCAF. It has been considered advisable to maintain certain facilities intact on a standby basis such as in the field of metal components for ammunition and certain shell making facilities. In the absence of such arrangements, certain production lines have been permitted to lapse and the Crown-owned capital assistance assets and production tooling have been recovered. In each case a survey was made to determine whether the Crown-owned equipment could be transferred to other programs, should be retained in storage for future use, or declared surplus on the grounds that it is beyond economical repair or obsolete to present-day production methods.

A priority list was completed of machine tools which would be required for immediate production in the event of an emergency, and a number of machine tools were rehabilitated in 1955.

Since the inception of Canada's Mutual Aid contributions to NATO each annual program has included a quantity of new defence equipment shipped directly to European NATO countries from Canadian production lines. In selecting these direct production items for transfer as mutual aid, consideration has been given to the possibility of developing and maintaining production runs in Canada which could not be achieved on the basis of the requirements of the Canadian Armed Forces alone. Although the major aim is to help European members of the alliance to meet their equipment needs, the Mutual Aid Program has added certain elements of strength to the Canadian industrial base and has prevented the disruption of highly specialized production.

During the early part of 1955 defence contractors experienced no major difficulties in obtaining adequate supplies of materials. Subsequently however the defence program felt the effects of a number of shortages. Early in the third quarter a shortage developed in steel. New demands for structural steel for the mid-Canada and Distant Early Warning lines and for an extensive program of expansion in the uranium industry contributed to this situation. Increased demand for steel imports from the United States coincided with the development of shortages in that country similar to those in Canada and as a result supplies became increasingly dependent on allotments under the United States Defence Materials System. Aluminum was in generally short supply throughout 1955. However the impact on the defence program was slight as aircraft manufacturers, the largest defence users of aluminum, had sufficient stocks on hand to meet their needs. Although copper was in short supply in the United States no shortages were experienced in Canada as producers made available sufficient prime metal to keep Canadian mills running at capacity. Throughout 1955 the response of Canadian suppliers to all informal requests for materials needed in the defence production program was such that all requirements were filled satisfactorily without undue disruption to production schedules.

PART III.—CIVIL DEFENCE

The accelerating threat of aggression that began shortly after the completion of demobilization following World War II made necessary the reorganization of military strength. It also made apparent the need for the development of a plan of civil defence as part of Canada's program of defence against direct attack. Thus in October 1948 the Minister of National Defence appointed a Co-ordinator of Civil Defence whose task it was to prepare such a plan. To assist in the co-ordination of the planning, an interdepartmental committee—the Federal Civil Defence Planning Committee—was established as well as a Federal-Provincial Advisory Committee composed of the Federal Minister responsible for civil

defence as Chairman and each Provincial Minister responsible for civil defence as members. In February 1951 the administration of civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare.

The Canadian plan was developed after study of similar organizations in the United Kingdom, western Europe and the United States. It was agreed that civil defence organization should be incorporated within the framework of civil government at each level—federal, provincial and local—each with its own sphere of responsibility. In general each province is self contained and is divided into a number of areas, with the fundamental idea of mutual support to any disaster region; some areas are organized on a basis of mobile support and reception only. The channel of communication is from the federal authority to provincial authority and thence to local authority.

The Federal Office of Civil Defence consists of the Civil Defence Co-ordinator and the following services: operations and training; administration and supply; health planning; welfare planning; information; communications and transportation. A number of other federal departments are involved in planning, such as the Royal Canadian Mounted Police, the Department of Agriculture, the Department of Transport and the Defence Research Board.

In co-operation with the Royal Canadian Air Force, an early warning system has been established in the more vulnerable areas where sirens have been provided by the Federal Government. In co-operation with the Departments of National Defence and Veterans Affairs a program of stockpiling medical supplies and equipment is in progress across Canada.

A Federal Civil Defence Training School was started in January 1951 at which courses were given for organizers, general and rescue instructors and radiological monitors. In March 1954 this school, renamed the Canadian Civil Defence College, was set up in permanent location at Arnprior, Ont., and courses have been continued and expanded into such fields as tactics, emergency feeding and accommodation, technical reconnaissance and disaster studies. A number of specialist courses have been conducted across the country by the Health Planning Group.

Up to the end of July 1955, 6,682 persons had received training in one or other of these various fields. First Aid training for civil defence workers is undertaken by the St. John Ambulance Association under an agreement between the Federal Government and the Association whereby the Government pays a per capita grant. Other agreements for co-operation are in force between the Federal Government and the Canadian Red Cross Society, the Canadian Legion and the Boy Scouts Association.

A Financial Assistance Program is in operation which provides each province with a quota of money based on population and vulnerability in which 50 p.c. of the cost is contributed by the Federal Government to approved projects shared between a municipality and a province. A minimum of 25 p.c. is contributed direct to a municipality for a similar project in which the provincial government does not share. Also, the Federal Government has offered to bear one-third of the cost of standardizing fire-hose couplings. By the end of 1955 the Provinces of Ontario, Alberta and British Columbia had accepted the offer and were proceeding with a standardization program. Large quantities of training equipment including rescue and fire fighting vehicles have been provided by the Federal Government to the provinces in order to foster their training programs. Draft agreements have also been forwarded to all provinces, on an equal basis, in paying workmen's compensation, where necessary, to a civil defence worker; an agreement to this effect has been signed with the Provinces of Ontario, British Columbia and Alberta.

Up to the end of March 1954, 24 civil defence manuals were published by the Federal Civil Defence authorities to assist in the organization, training and general education of civil defence personnel, and nine others were in preparation. In addition to these a considerable amount of guiding literature was issued to assist provincial and local governments.

Each province has developed its own civil defence organization patterned on that of the Federal Government. Certain provinces have conducted civil defence training courses, similar to those of the Federal Government, with the object of training local instructors and key personnel.

Many of the main centres of population have made considerable advances in organization and training. An estimated 179,185 civil defence workers for the whole of Canada were reported on strength as at Mar. 31, 1955.

In 1951 an agreement was made between Canada and the United States whereby each country pledged itself to go to the assistance of the other in the event of attack and a United States-Canada Civil Defence Committee was set up. A number of working groups were also formed to carry out specific tasks in the development of ways and means of carrying out this agreement. The Provinces of Canada too have discussed with adjoining States of the United States the working out of their mutual problems. Close liaison is maintained with the United Kingdom and other NATO countries.

CHAPTER XXIX.—SOURCES OF OFFICIAL INFORMATION AND MISCELLANEOUS DATA

CONSPECTUS

PART I.—SOURCES OF OFFICIAL INFORMATION

Section 1.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten year and five year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Information that is not mainly statistical may be secured from the individual Department concerned with the particular subject as indicated in the Directory at pp. 1183-1212. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Information Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. (*See Index.*) The Departments of Agriculture, Northern Affairs and National Resources, and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining Government Departments, though several of the latter have publicity branches or public relations divisions.

Government Departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257), subsequently amended in March 1953 (1-2 Elizabeth II, c. 18).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data bearing on Canada, for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social security.

Inquiries.—Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort from the statistical side deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.—The Dominion Bureau of Statistics is the principal publication agency of the Federal Government; the subjects of its reports cover all aspects of the national economy.

The policy with regard to the distribution of publications is to extend the service to the public as widely as possible at a minimum cost. A special subscription rate of \$30 per annum entitles a subscriber to receive, as issued, a copy of each report, including the D.B.S. *Daily Bulletin*. Statistical information not of general interest is published in the form of Reference Papers or Memoranda for which additional annual subscription rates of \$5 and \$15 respectively are charged.

A complete list of DBS publications is available from the Dominion Statistician. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, giving the correct title or titles of the publication or series of reports in which the applicant is interested and should include the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.—The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects (except for inquiries from the press which are handled by the Department's Press Office) as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done however by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who visit Canada to write of Canadian affairs are given assistance from time to time by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

Information Branch, Department of Trade and Commerce.—For details see p. 1023.

Information Services Division, Department of National Health and Welfare.—The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare, social security and civil defence, for use throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are *Canada's Health and Welfare* (monthly), *Canadian Nutrition Notes* (monthly), *Occupational Health Bulletin* (monthly), *Industrial Health Review* (semi-annually) and *Nutrition Bulletin* (annually).

Canadian Broadcasting Corporation.—Radio broadcasting is an important medium of information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada combines, in one national system, publicly owned stations and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936 the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most countries because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations attached to the network lines, which serve areas unable because of topographical conditions to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. All CBC schedules include news, music, drama, informative talks, children's programs, school broadcasts, public service broadcasts, sports, women's activities, etc. Listeners have a very wide range of radio fare, since the CBC not only produces its own programs in the various production centres across Canada but brings in selected programs from the networks in the United States, the British Broadcasting Corporation and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters in New York, and is credited with having done more to inform listeners of the United Nations' activities than any other broadcasting system.

Through the International Service operated by the CBC on behalf of the Canadian Government, programs are broadcast over shortwave in fifteen languages: English, French, German, Dutch, Danish, Norwegian, Swedish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian and Polish. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. In addition to its shortwave broadcasts the CBC International Service has developed a transcription service and recorded programs in English, French and Spanish as well as Canadian musical transcriptions are at the disposal of radio networks and stations all over the world.

National Film Board.—The National Film Board provides information on a great variety of subjects in the form of films, film-strips and still photos. In keeping with its terms of reference the Board's products are both informative and interpretative and are widely distributed, theatrically and non-theatrically. (See also Educational and Cultural Functions of the National Film Board, p. 365.)

As a service to government departments, the Board maintains a film preview library of 4,000 prints where films may be screened with a view to purchase or for informational purposes; some 500 film-strips are catalogued. The Board also maintains libraries of films on such specialized subjects as health, sociology, medicine and industry.

Films produced and distributed by the Board are shown on motion picture and television screens all over the world. In Canada widespread distribution is achieved by circulating films on a circuit arrangement whereby the users themselves keep the films moving on to the next showing point. Public libraries and other film depots assist distribution by maintaining film libraries for public use. More than 20,000 prints are in circulation abroad through posts of the Departments of External Affairs and of Trade and Commerce, through the Board's offices in New York and Chicago in the United States and in London, England, as well as through other loan agencies.

The Board's library of approximately 100,000 still photos serves government departments, commercial photographers and newspapers and periodicals in Canada and abroad.

Section 2.—Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understand the broad differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population, national defence, etc., are constitutionally federal affairs and in such fields the respective Departments at Ottawa are the proper sources with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces but certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case of Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture for instance data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should as a general rule be sent to the individual Departments listed in the Directory; inquiries for information of a statistical nature should be addressed to the Dominion Bureau of Statistics, Ottawa.

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them.

The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7 (e) of the Financial Administration Act were brought up to date and approval signed by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Most provincial government printed publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island...	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria

Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1956 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later Census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Dominion Statistician at the price quoted.

PART IV.—FEDERAL LEGISLATION 1955

This classified list of federal legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada at the given volume and chapter.

**Legislation of the Second Session of the Twenty-Second Parliament,
Jan. 7 to July 28, 1955**

Subject, Chapter and Date of Assent	Synopsis
3-4 Elizabeth II	
Agriculture—	
9 Mar. 31	<i>An Act to amend the Canada Grain Act</i> provides for increased salaries for the Chief Commissioner, the Commissioners and Assistant Commissioners.
27 June 28	<i>The Canada Agricultural Products Standard Act</i> provides for the establishment of standards, grading and inspection of all agricultural products and for the regulation of international and interprovincial trade in such products.
36 June 28	<i>The Meat Inspection Act</i> which includes regulations respecting the inspection of meat and meat products entering international and interprovincial trade has been enacted mainly for sanitary and health purposes as opposed to quality, grade and standards.
39 June 28	<i>An Act to amend the Prairie Farm Rehabilitation Act</i> brings the Act into line with Ministerial authority to undertake projects involving an expenditure of up to \$15,000 as contained in the Financial Administration Act and Regulations.
56 July 28	<i>An Act to amend the Prairie Farm Assistance Act</i> amends the definition of cultivated land eligible for award to include land which could not be seeded or summerfallowed in the year of award owing to natural causes beyond the control of the farmer.
Constitution and Government—	
5 Mar. 24	<i>An Act to amend the Representation Act</i> changes the name of the electoral district of Northumberland in New Brunswick to Northumberland-Miramichi to distinguish it from Northumberland electoral district in Ontario.
12 Mar. 31	<i>An Act to amend the Members of Parliament Retiring Allowances Act</i> makes several minor changes in the legislation respecting withdrawal allowances.
16 May 4	<i>An Act to amend the Public Service Superannuation Act</i> makes a number of changes in definitions and in the sections on pensionable service, payments to widows and children, medical examination requirements, non-established Newfoundland civil servants, countable service in RCMP, etc.
17 May 4	<i>An Act to amend the Territorial Lands Act</i> permits the sale of Territorial land prior to surveying.
21 May 26	<i>An Act to amend the Northwest Territories Act</i> increases the sessional indemnity of elected members of the Northwest Territories Council.
23 May 26	<i>An Act to amend the Yukon Act</i> provides for increased sessional indemnity to members of the Yukon Council as well as for increased living and travelling expenses in connection with Council sittings.
24 June 28	<i>The Alberta-British Columbia Boundary Act, 1955</i> confirms part of the boundary line between the two provinces as surveyed and marked on the ground by commissions appointed for the purpose.
33 June 28	<i>An Act to amend the Government Employees Compensation Act</i> provides for coverage to persons in the Government service who are not paid a direct wage or salary and for coverage of persons locally engaged outside Canada. Under this amendment, compensation will be determined in accordance with the law of the province where the employee is usually employed rather than where the accident occurred. Additional benefits are provided where an employee dies as the result of an accident while absent on duty from his usual place of employment.
35 June 28	<i>An Act to amend the Library of Parliament Act</i> effects certain changes in the internal organization of the Library of Parliament.

**Legislation of the Second Session of the Twenty-Second Parliament,
Jan. 7 to July 28, 1955—continued**

Subject, Chapter and Date of Assent	Synopsis
Constitution and Government— concl.	
44 July 11	<i>An Act to amend the Canada Elections Act</i> includes many changes of technical, remedial and consequential nature, all of which are intended to improve the situation for the electors and the administrators. The Chief Electoral Officer is given the full status of a Deputy Minister plus a salary increase and the allotment for personal expenses of a candidate is increased from \$1,000 to \$2,000.
49 July 11	<i>An Act to amend the Municipal Grants Act</i> broadens the scope of grant payments to municipalities in lieu of taxes and increases the number of municipalities that may qualify for such grants. The grants will be calculated on the ratio of federal property to taxable property only instead of on the ratio of federal property to taxable and federal property combined, and will be calculated on the full real property tax rate rather than on 75 p.c. of that rate.
Defence and Veterans Affairs—	
13 Mar. 31	<i>An Act to amend the War Veterans Allowance Act, 1952</i> increases the monthly allowance under the Act and raises the limits of permissible income. Certain benefits are also extended to additional classes of persons.
28 June 28	<i>The Canadian Forces Act, 1955</i> contains amendments to the National Defence Act and the Defence Services Pension Act.
43 June 28	<i>An Act to amend the Veterans Benefit Act, 1954</i> terminates at July 1, 1955 the benefits of the Reinstatement in Civil Employment Act and the Unemployment Insurance Act which were made applicable to short term engagements resulting from the Korean emergency in 1950.
52 July 28	<i>An Act to amend the Defence Production Act</i> extends the life of Sects. 23 to 31 of the Act to July 31, 1959. The amendment also provides that regulations made under the Act must be laid before Parliament as soon as possible. If, within seven days, a notice of motion is given signed by ten members calling for revocation or amendment, that motion must be debated within the next four sitting days.
Finance—	
3 Mar. 24	<i>An Act to amend the Financial Administration Act</i> raises the salary of the Auditor General to \$20,000 per annum.
7 Mar. 31	<i>Appropriation Act No. 1, 1955</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1956.
8 Mar. 31	<i>Appropriation Act No. 2, 1955</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1956.
10 Mar. 31	<i>The Canada-Ireland Income Tax Agreement Act, 1955</i> implements an agreement between Canada and Ireland for the avoidance of double taxation with respect to income tax.
11 Mar. 31	<i>The Canada-Ireland Succession Duty Agreement Act, 1955</i> implements an agreement between Canada and Ireland for the avoidance of double taxation with respect to succession duty.
18 May 26	<i>Appropriation Act No. 3, 1955</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1956.
25 June 28	<i>Appropriation Act No. 4, 1955</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1956.
32 June 28	<i>An Act to amend the Customs Act</i> includes among other amendments a revision of sections of the Act relating to the valuation of goods for duty and places a limit on the period during which appeals against the original appraisal may be made.
51 July 28	<i>An Act to amend the Customs Tariff</i> gives effect to budget resolutions which affected about 80 tariff items. Many of these were amendments to remove uncertainties and administrative difficulties but there were also tariff reductions on a wide range of items.
53 July 28	<i>An Act to amend the Excise Tax Act</i> gives effect to Budget resolutions on the Excise Tax Act which, in particular, reduced the special excise tax on passenger automobiles from 15 p.c. to 10 p.c. and repealed the 10 p.c. special excise tax on tires and tubes.

**Legislation of the Second Session of the Twenty-Second Parliament,
Jan. 7 to July 28, 1955—continued**

Subject, Chapter and Date of Assent	Synopsis
Finance—concl.	
54 July 28	<i>An Act to amend the Income Tax Act</i> gives effect to the Budget resolutions on the Income Tax Act. The major tax changes included a reduction in the graduated rates of personal income tax ranging from 13.3 p.c. to 2.8 p.c., the reduction effective July 1, 1955. The tax rate on taxable incomes of corporations in excess of \$20,000 was also reduced from 47 p.c. to 45 p.c., effective Jan. 1, 1955.
55 July 28	<i>An Act to amend the Income Tax Act, the Railway Act and the Tariff Board Act</i> in respect of salaries of certain public officials provides for increased salaries for members of the Income Tax Appeal Board, the Board of Transport Commissioners and the Tariff Board.
60 July 28	<i>Appropriation Act No. 5, 1955</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1956.
Fisheries—	
34 June 28	<i>The Great Lakes Fisheries Convention Act</i> implements a Convention on Great Lakes Fisheries between Canada and the United States signed at Washington Sept. 10, 1954. A joint commission will study problems connected with the decline of some of the Great Lakes fisheries and formulate a program of conservation.
46 July 11	<i>The Fisheries Improvement Loans Act</i> guarantees bank loans to fishermen up to the amount of \$4,000 for the purpose of assisting in the purchase, construction and repair of specified capital items and improvements for use in the pursuit of their occupation.
Justice—	
2 Mar. 24	<i>An Act to amend the Criminal Code</i> places on the statute books the date (Apr. 1, 1955) of the coming into force of the new Code.
40 June 28	<i>An Act to amend the Prisons and Reformatories Act</i> revises the regulations relating to the confinement of boys under the age of sixteen convicted of imprisonable offences in New Brunswick.
45 July 11	<i>An Act to amend the Criminal Code</i> provides for a levy on each race track which will form a fund sufficient to ensure uniform and adequate supervision at all tracks regardless of size.
48 July 11	<i>An Act to amend the Judges Act, and the Judicature provinces of the Yukon Act and the Northwest Territories Act</i> provides increases in the salaries of judges of the Supreme Court of Canada, the Exchequer Court of Canada and the superior and county courts of the provinces. The amendment also provides for the appointment of a judge of the Northwest Territories.
Labour—	
1 Jan. 13	<i>An Act to amend the Unemployment Insurance Act</i> increases the rates of supplementary benefit which will, from Jan. 1, 1955, be paid to certain classes of persons for the period Jan. 1 to Apr. 15 in any year.
50 July 11	<i>The Unemployment Insurance Act</i> constitutes the first general revision of the Act since its institution in 1941. It increases benefit rates and provides for certain changes in the duration of both regular and seasonal benefits. Contributions are adjusted and are changed from a daily to a weekly earning basis and benefits from a daily to a weekly basis. Enforcement and administrative provisions are also amended.
Trade and Commerce—	
14 May 4	<i>The Exportation of Power and Fluids and Importation of Gas Act</i> revises and consolidates the Electricity and Fluid Exportation Act. Licences are now required for the importation of gas as well as for the exportation of power and fluids. The Act also provides for the imposition of export duties on power exported from Canada. Authority is no longer granted for the imposition of duties on exports of gas, oil and other fluids.
22 May 26	<i>An Act to amend the Precious Metals Marking Act</i> relates to the method of applying quality mark to certain plated articles and to the registration of trade marks.
Transportation and Communications—	
4 Mar. 24	<i>An Act to amend the National Harbours Board Act</i> increases the membership of the Board from three to four.
6 Mar. 24	<i>An Act to amend the Winnipeg and St. Boniface Harbour Commissioners Act</i> relates to the election of a chairman and the constitution of a quorum.

**Legislation of the Second Session of the Twenty-Second Parliament,
Jan. 7 to July 28, 1955—concluded**

Subject, Chapter and Date of Assent	Synopsis
Transportation and Communications —concl.	
15 May 4	<i>The Foreign Aircraft Third Party Damage Act</i> implements the Convention agreed upon by the International Civil Aviation Organization designed to ensure adequate compensation for persons who suffer damage caused on the surface by foreign aircraft, while limiting in a reasonable manner the extent of the liabilities incurred for such damage in order not to hinder the development of international civil air transport.
29 June 28	<i>The Canadian National Railways Act</i> consolidates under one statute the various enactments relating to the organization, administration and financing of the Canadian National Railways.
30 June 28	<i>The Canadian National Railways Financing and Guarantee Act, 1955</i> authorizes the provision of moneys to meet certain capital expenditures of the Canadian National Railways System during 1955 and authorizes the guarantee of certain securities to be issued by the Company.
31 June 28	<i>The Canadian National Railways Refunding Act, 1955</i> provides for the refunding of matured, maturing and callable financial obligations.
38 June 28	<i>The New Westminster Harbour Commissioners Loan Act, 1955</i> provides financial assistance for the construction of a causeway and trestle-bridge to give access to Annacis Island in New Westminster harbour.
41 June 28	<i>An Act to amend the Railway Act</i> raises from \$1,000,000 to \$5,000,000 the annual federal appropriation placed to the credit of the Railway Grade Crossing Fund to be used for construction work for the protection, safety and convenience of the public in respect of level crossings. The amendment also includes certain changes in connection with the administration of the fund.
42 June 28	<i>An Act to approve an agreement between The Toronto Harbour Commissioners, The Toronto Terminals Railway Company, Canadian National Railway Company and Canadian Pacific Railway Company</i> concerns the ownership of certain railway facilities on Harbour Commission property.
47 July 11	<i>The International River Improvements Act</i> requires the procuring of a licence for the construction, operation or maintenance of any international river improvement, such as a dam, obstruction, canal, reservoir or any other work that will alter the natural flow or interfere with the actual or potential use of such international river outside Canada. This Act, except in specified instances, applies to the Government of Canada, to the Government of any province and to any private individual.
57 July 28	<i>An Act to amend the Radio Act</i> places under government control and inspection the construction of radio station antennae and imposes a penalty for unlawful interception of radio communications.
58 July 28	<i>An Act to amend the St. Lawrence Seaway Authority Act</i> gives to the St. Lawrence Seaway Authority the power to expropriate lands on Indian reserves as well as other lands.
59 July 28	<i>An Act to amend the Transport Act</i> implements the Report of the Royal Commission established to enquire into the application and effects of agreed freight rates as authorized by the Board of Transport Commissioners.
Miscellaneous—	
19 May 26	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> extends the application of the Act to the years 1955 and 1956.
20 May 26	<i>An Act to amend the Historic Sites and Monuments Act</i> amplifies the definition of "historic place" and changes slightly the representation on the Board as well as the method and amount of payment to Board members.
26 June 28	<i>An Act to amend the Blind Persons Act</i> lowers the age for eligibility to 18 years and increases the allowance.
37 June 28	<i>An Act to amend the National Parks Act and to establish a National Park in the Province of Newfoundland</i> provides for the withdrawal of certain lands from Waterton Lakes and National Park so that they might be turned over to the Blood Indians in exchange for rights-of-way, for the withdrawal of an island from the St. Lawrence Islands National Park, and for the establishment of a National Park in Newfoundland.

PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49, from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264 and for 1954 in the 1955 edition, pp. 1329-1330. References regarding federal and provincial elections or changes in legislatures or ministries are given in Chapter II on Constitution and Government and in the Appendix.

1955. *Jan. 7*, Opening of Federal Parliament ceremonies (2nd session of 22nd Parliament) televised for the first time. *Jan. 24*, Plan announced for construction of the first Canadian atomic power plant near Des Joachims, Ont. *Jan. 24-27*, His Excellency Mohammed Ali, Prime Minister of Pakistan, made official visit to Ottawa. *Jan. 26*, House of Commons approved Protocol to the North Atlantic Treaty providing for the admission to NATO of the Federal Republic of Germany (signed on behalf of Canada at Paris, Oct. 23, 1954). *Jan. 31*, Motor vehicle factory and parts depot workers at Windsor, Oakville and Etobicoke, Ont., resumed work after a 109 day strike—163,000 man-days lost. *Jan. 31-Feb. 8*, Conference of Commonwealth Prime Ministers held at London, England; Canada's Prime Minister presented with the symbol of the freedom of London, a rare honour. *Feb. 9-10*, His Excellency General Paul Eugene Magloire, President of Haiti, visited Ottawa. *Mar. 21*, Fire destroys 35 buildings at Nicolet, Que.—damage \$700,000. *Mar. 22*, Malton airport suffers \$5,000,000 fire in violent storm. *Mar. 25-27*, His Excellency Mario Scelba, Prime Minister of Italy, visited Ottawa. *Apr. 2*, Angus L. Macdonald Bridge linking Halifax and Dartmouth officially opened. *Apr. 8-May 14*, Rt. Hon. C. D. Howe, Minister of Trade and Commerce, made goodwill tour of Australia and New Zealand. *Apr. 12*, Deputy Minister of National Health and Welfare attended the meeting at Ann Harbour, Michigan, at which the results of the Salk vaccine trials were announced and the release of Canada's stock of vaccine started immediately. *Apr. 26-27*, Federal-Provincial Conference held at Ottawa at which the main topic of discussion was unemployment relief. *May 5*, Allied High Commission of Great Britain, the United States and France proclaimed an end to the ten year occupation of West Germany. *May 9*, Unity committee approved merger of the Trades and Labour Congress of Canada and the Canadian Congress of Labour, later confirmed at their respective conventions, as the Canadian Labour Congress. *May 9-11*, NATO Council met in Paris; Federal Republic of Germany formally admitted to Organization. Hon. L. B. Pearson, Minister of External Affairs, represented Canada. *May 15*, Austria's freedom from occupation granted by a treaty signed by the foreign ministers of Russia, Great Britain, the United States and France. *May 24*, CPR and CNR started faster Montreal-Vancouver schedules, cutting 14 to 16 hours from run. *May 30-June 10*, Eighth and last annual International Trade Fair to be sponsored by the Federal Government held at Toronto. *June 3-4*, CP Air Lines inaugurated first polar air service, Vancouver to Amsterdam. *June 5-11*, International Commission for the Northwest Atlantic Fisheries held at Ottawa. *June 22*, Laying of first trans-Atlantic telephone cable started at Clarendville, Nfld. *June 25*, Tenth anniversary of the United Nations observed at Ottawa by ceremonies on Parliament Hill. *June 28*, Canadian Supreme Court rejected challenge to legality

of Federal Labour Code by Ontario, Quebec and Alberta Governments. *July 1*, Centennial celebrations opened at London, Ont. *July 2*, Charlottetown, P.E.I. marked centennial. *July 11*, End of Parliamentary debate with agreement to three year limit on emergency powers under the Defence Production Act. *July 18-22*, NATO conference in Paris; Senator W. McL. Robertson represented Canada. *July 18-23*, Summit Conference at Geneva; heads of Government of United Kingdom, United States, Russia and France planned for European security. *Aug. 1*, Canada-Russia parcel post resumed. *Aug. 3*, International conference on the peaceful uses of atomic energy opened at Geneva; W. J. Bennett, President, Atomic Energy of Canada Limited, headed Canadian delegation. *Aug. 13*, Canso Causeway linking Cape Breton Island with the mainland officially opened. *Aug. 15*, Acadians mark expulsion bicentennial at Grand Pré, N.S. *Aug. 20*, Governor General Massey opened world Scout Jamboree at Niagara-on-the-Lake, Ont. *Aug. 22-25*, Mr. Garfield Todd, Prime Minister of Southern Rhodesia, visited Ottawa. *Aug. 25-Sept. 10*, U.S.S.R. agricultural experts toured Canada's farming areas. *Aug. 29*, UN conference on disarmament opened at New York; Hon. Paul Martin, Minister of National Health and Welfare, represented Canada. *Sept. 1*, Golden Jubilee of the formation of Provinces of Saskatchewan and Alberta; celebrations took place throughout the year. *Sept. 20*, Tenth session of the General Assembly of the UN opened at New York; Hon. Paul Martin, Minister of National Health and Welfare, chairman of the Canadian delegation. *Sept. 26*, Joint United States-Canadian Committee on Trade and Economic Affairs met at Ottawa. *Sept. 30*, "Operation Franklin", geological survey of Canada's Arctic islands, completed. HRH. Princess Mary arrived on her first tour of Canada. Hon. L. B. Pearson, Minister of External Affairs, left on official tour of twelve countries including Russia, Singapore and other places in the Far East. *Oct. 3-6*, Federal-Provincial Conference on fiscal matters held at Ottawa. *Oct. 5*, Government announced plans for construction of a large power plant in Pakistan under Colombo Plan. *Oct. 29*, HMCS *St. Laurent*, first of a series of 14 new "nuclear age" destroyer escorts, commissioned at Montreal. *Nov. 1*, Hon. L. B. Pearson officially opened the "Canada Dam" in West Bengal, India, a project to which Canada contributed the major part. *Nov. 14*, End of four month strike involving 2,000 employees of the deHavilland Aircraft plant, Toronto—168,000 man-days lost. *Nov. 12*, Riverside landslide at Nicolet, Que.—damage \$5,000,000. *Nov. 15*, Supreme Court of Canada ruled 1953 Saskatchewan Moratorium Act *ultra vires*. *Nov. 16*, Big Four foreign ministers' conference ended without agreement. *Nov. 21*, Federal and Ontario Governments agreed to build northern Ontario section of trans-Canada gas pipeline. *Dec. 14*, Sixteen new nations admitted to membership in UN after Outer Mongolia and Japan were deleted from Canada-sponsored 18-nation bloc proposal. *Dec. 15-16*, NATO Council meeting at Paris

approved building air-warning screen across Europe; Hon. L. B. Pearson leader of Canadian delegation.

1956. *Jan. 10*, Opening of 3rd Session of 22nd Parliament. *Jan. 11*, Mrs. Ann Shipley first woman in Canadian Parliamentary history to move the Address in Reply to the Speech from the Throne. *Feb. 3-8*, Rt. Hon. Sir Anthony Eden, Prime Minister of the United Kingdom addressed joint session of the Senate and House of Commons during official visit to Ottawa. *Feb. 3*, Merger of the Imperial Bank of Canada and Barclays Bank (Canada) as the Imperial Bank of Canada formally approved by the Federal Government. *Feb. 14*, End of 148 day strike involving 17,000

General Motors employees, the costliest strike in Canadian history. *Mar. 4*, President Giovanni Gronchi of Italy addressed joint session of the Senate and House of Commons during official visit to Ottawa. *Mar. 9*, Federal-Provincial tax conference opened at Ottawa; no agreement reached. *Mar. 20-Apr. 5*, Governor General Massey undertook 10,000 mile tour through Canada's Far North. *Mar. 23*, Pakistan formally became the Islamic Republic of Pakistan. *Mar. 26-27*, Rt. Hon. Louis S. St. Laurent, Prime Minister of Canada, Dwight D. Eisenhower, President of the United States, and Adolfo Ruiz Cortines, President of Mexico, met at White Sulphur Springs, Va., to discuss matters of common interest.

PART VI.—STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1954

Newfoundland entered Confederation in 1949 and figures for that Province have since been included with Canadian statistics as they have become available. Under each item in the following Summary, the inclusion of Newfoundland data for the first time is indicated by a black dot (•). If no dot is shown on any of the years from 1951-54 for a particular item, Newfoundland is excluded throughout. In some instances the symbol does not apply. Revisions of figures published in previous editions of the Year Book are not indicated in this Summary.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

NOTE.—The interpretation of the symbols used in the table will be found facing p. 1 of this volume.

1881-1921 are for the immediately preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities are estimated.

¹ Data shown for 1941-54 represent cheddar and other cheese made from whole milk; prior to 1941 the figures included other cheese for Quebec only.

item does not include skim milk and buttermilk

¹¹ Years ended Mar. 31 prior to 1931.

¹⁰ Prior to 1921 this
